

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

### Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

### About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

##### Merchant Shipping (Mercantile Marine Fund) Act, 1898 (Light Dues) :

- [Cd. 413.] Report of a Committee appointed by the Board of Trade to examine the Claims and Suggestions received for Exemption from Light Dues, or for alteration of the existing Scale or Rules. I. Report. 87

##### Merchant Seamen :

- [Cd. 133.] Report of a Committee appointed by the Board of Trade on the question of Continuous Discharge Certificates for Seamen; with Minutes of Evidence, Appendix, and Index. I. Report. 99

- [Cd. 136.] Part II. Minutes of Evidence, Appendix, and Index. 107

##### Merchant Shipping Act, 1894 (Vessels detained) :

- [Cd. 303.] Return of all British Ships ordered from 1st July 1899 to 30th June 1900, to be provisionally detained as Unsafe for various reasons, giving the Names of the Owners of those Ships which have been Dismantled, Broken-up, or converted into hulks, &c. (in continuation of [c. 9427]), 1899. 215

##### Merchant Seamen's Fund :

276. Account of the Receipt and Expenditure under the Seamen's Fund Winding-up Act, for 1899. 227

**Marine Engineers :**

255. Return of the Correspondence between the Board of Trade and the Representative Societies of Shipowners and Engineers and others upon the subject of Apprenticeship of Applicants for Board of Trade Certificates of Competency as Marine Engineers (in continuation of No. 316, of 1896).  
p. 233

**Mercantile Marine (Colour Tests) :**

- [Cd. 116.] Report on the Sight Tests used in the Mercantile Marine, for the Year 1899 (in continuation of [c. 9248], 1899).  
251

**Merchant Service (Certificates of Masters, Mates, Skippers, and Second Hands) :**

147. Return showing, for the last completed Year, the Number of Successful and Unsuccessful Candidates for Masters' and Mates' Certificates of Competency in the United Kingdom; and for Skippers' and Second Hands' Certificates of Competency in England and Wales and Ireland, distinguishing the Ports at which the several Examinations were held, and stating the Fees charged.  
261

**Seamen's Savings Banks, Money Orders, and Transmission of Wages :**

3. Account of all Deposits received and repaid by the Board of Trade, on account of Seamen's Savings Banks, under the Authority of the Merchant Shipping Act, 1894, during the Year ended 20th November 1898, and of the Interest thereon; Statement showing the Number and Amount of Seamen's Money Orders issued and paid at Ports in the United Kingdom and at Ports Abroad, from 1855 to 31st March 1899; also Statements showing the Receipts and Payments in connection with the Transmission of Seamen's Wages, Home and Foreign, from 1878 to 31st March 1899.  
265
388. Similar Account from 1878 to 31st March 1900.  
271

**Wages and Effects of Deceased Seamen :**

21. Account of the Sums received and paid by the Board of Trade in respect of the Wages and Effects of Deceased Seamen, from the 1st April 1898 to the 31st March 1899.  
277

**Suez Canal, Commercial, No. 1 (1900) :**

- [Cd. 99.] Returns of Shipping and Tonnage, 1897, 1898, and 1899.  
279

**HARBOURS.****Harwich Harbour :**

202. An Abstract of the Accounts of the Receipts and Expenditure of the Harwich Harbour Conservancy Board down to the 31st day of March 1900; also an Account of their Credits and Liabilities, with a Report of the Conservancy Board on their Proceedings, and on the Works executed by them, and on the state of Harwich Harbour.  
291

**Peterhead Harbour :**

- [Cd. 20.] Reports respecting Peterhead Harbour Works (in continuation of [c. 9113], 1899).  
297
- [Cd. 412.] Reports respecting Peterhead Harbour Works (in continuation of [c. 20], 1900).  
303

**Ramsgate Harbour :**

1. Statement of the Receipts and Payments made by the Board of Trade, for the Year ended 31st March 1899; with an Account of the Receipt and Issue of Stores.  
309

HARBOUR, &c. BILLS.

Margate Corporation Bill [H.L.] :

142. Report of the Board of Trade on the Margate Corporation Bill [H.L.] .  
p. 313

North British Railway Bill :

106. Report of the Board of Trade on the North British Railway Bill [H.L.] :  
315

North-Eastern Railway Bill [H.L.] :

122. Report of the Board of Trade on the North-Eastern Railway Bill [H.L.]  
317

Southport and Lytham Tramroad Bill :

- 106.—I. Report of the Board of Trade on the Southport and Lytham Tramroad Bill.  
319

Piers and Harbours (Provisional Orders) :

78. Report by the Board of Trade of their Proceedings under the General Pier and Harbour Act, 1861, and the General Pier and Harbour Act, 1861, Amendment Act.  
323

Kilrush Pier (Proposed Provisional Order) :

249. Report made to the Board of Trade on the subject of an Inquiry held by the Board of Trade at the Court House, Kilrush, on the 27th day of April 1900, relative to a Provisional Order applied for by Mr. Vandeleur on the subject of Kilrush Pier, which Provisional Order has been refused.  
331

198. Memorandum stating the Nature of the Proposals contained in the Provisional Orders included in the Pier and Harbour Orders Confirmation (No. 1) Bill.  
335

208. Memorandum stating the Nature of the Proposals contained in the Provisional Orders included in the Pier and Harbour Orders Confirmation (No. 2) Bill.  
337

234. Special Report by the Board of Trade on the Pier and Harbour Provisional Orders Confirmation (No. 2) Bill.  
339

PILOTAGE.

Pilotage :

\* The basis of the returns of shipping engaged in the foreign trade was extended in 1897, and now includes vessels (liners) engaged in the coasting trade of Italy which extend their voyages to neighbouring foreign ports. Vessels belonging to shipping companies (*lines di navigazione a vapore*) which touch at Italian ports have been also since 1897 included in the shipping returns.  
|| Provisional figures.

TABLE No. 5.—*continued.*

## PRINCIPAL MARITIME COUNTRIES—(FOREIGN TRADE).

TONNAGE of SAILING and STEAM VESSELS Entered and Cleared (with Cargoes and in Ballast) in the UNITED KINGDOM, the UNITED STATES, and the other PRINCIPAL MARITIME COUNTRIES, distinguishing between NATIONAL and FOREIGN SHIPS, in each of the Years 1850, 1860, 1870, 1875, 1880, 1885, and 1889-99.—*continued.*

| YEARS. | TONNAGE of NATIONAL SHIPS, and Proportion to Total Tonnage. |                             |           |                             |                     |                             |           |                             |

\* The figures here given are those of the net tonnage of vessels registered under Acts for registering British vessels, the Merchant Shipping Act, 1854 to 1889, and Part I. of the Merchant Shipping Act, 1894, and of vessels locally registered under the 41 c. of the Consolidated Statutes of Canada, from 1880. The figures do not include the tonnage of British Vessels registered at Shanghai, which was made a port of British registry from 1st November, 1875, by Order in Council under the Merchant Shipping Act, 1873, and the Foreign Jurisdiction Act, 1843. The tonnage of such vessels was 30,517 on 31st December 1899.

† The admeasurement was according to the Danube Rule prior to 1895, but in that year the British Rule was adopted.

‡ Small coasting vessels and fishing boats are included in the year 1871.

§ Excluding small coasting vessels and fishing boats. Including the vessels trading on the Danube in the case of Austria.

TABLE, No. 9.

|| Years ended 30th June.

¶ Registered tonnage is that employed in the foreign trade. Enrolled and licensed is that employed in the river, lake and coasting trade.

\*\* Vessels of foreign (i.e. Non-Chinese) type only, belonging to Chinese owners, and sailing under the Chinese flag.

†† Vessels of foreign type only, excluding junks.

‡‡ Prior to 1895 Steam Vessels of all tonnages and Sailing Vessels above 10 tons were included.

§§ New method of Tonnage admeasurement was adopted in this year.

||| Provisional figures.

\* The figures here given are those of the net tonnage of vessels registered under Acts for registering British vessels, the Merchant Shipping Acts, 1854 to 1889, and Part I. of the Merchant Shipping Act, 1894, and of vessels locally registered under the 41 c. of the Consolidated Statutes of Canada, from 1880. The figures do not include the tonnage of British Vessels registered at Shanghai, which was made a port of British registry from 1st November, 1875, by Order in Council under the Merchant Shipping Act, 1873, and the Foreign Jurisdiction Act, 1843. The tonnage of such vessels was 6,606 on 31st December, 1899.

† See note (†), p. 22.

‡ Years ended 30th June. The tonnage for 1870 and subsequent years is all new admeasurement.

§ The "enrolled and licensed" tonnage of the United States is confined to the home and river trades, and is prohibited by law from going on a foreign voyage.

*Note.*—By tonnage of shipping added, is meant the addition to the register of vessels, whether new-built or bought abroad. The above figures represent, therefore, the gross and not the net increase of the merchant navy of each country.

\* The figures for the new tonnage added to the register relate to British-built vessels only in the year 1850, and to all vessels in subsequent years.  
† The figures given for Italy prior to the year 1886 include the tonnage of vessels added to the register other than those new-built and bought abroad.  
‡ Years ended 30th June. These figures represent the tonnage built, including also the tonnage of canal boats and barges built.

TABLE, No. 12.

PRINCIPAL MARITIME COUNTRIES—(WRECKS).

NUMBER and TONNAGE of VESSELS belonging to the BRITISH EMPIRE, the UNITED KINGDOM, the other PRINCIPAL MARITIME COUNTRIES of EUROPE, and the UNITED STATES, which were removed from the REGISTER on account of WRECK in each of the Years 1887-98.

| 1899 - - | 45,510                     | 703,904 | 749,414 | 4,973           | 194,623 | 199,596 | 50,483   | 898,527 | 949,010 |

*Note.*—The Returns for the years prior to 1871 denote the tonnage of the newly-built vessels which were *first registered* in those years; but in the Returns for 1871 and later years, the tonnage of vessels the building of which was completed in those years is given, whether registered during the year or not.

The above Statement includes the following Steam Vessels, which were built for War purposes for Foreigners :—

| YEARS.   | Steam Vessels. | YEARS.   | Steam Vessels. | YEARS.   | Steam Vessels. |

Note.—Masters were included for the first time in the year 1888.

\* Prior to 1895 the vessels were registered under the Merchant Shipping Acts, 1854 to 1889, which Acts have now been repealed and their provisions re-enacted in the Merchant Shipping Act, 1894.

† Prior to 1892 only such Foreign-going vessels belonging to the Isle of Man for which crews were engaged at Ports in the United Kingdom are included.

‡ Lascars and Asiatics under Asiatic articles of agreement were almost entirely excluded from the above Table previous to 1886, their numbers having been only exceptionally recorded before that year. The total number of persons employed, including such Lascars and Asiatics, was, in 1886, 204,470, in 1887, 202,543, in 1888, 223,673, in 1889, 230,263, in 1890, 236,108, in 1891, 240,480, in 1892, 241,735, in 1893, 240,974, in 1894, 240,458, in 1895, 240,486, in 1896, 242,039, in 1897, 240,931, in 1898, 242,553, and in 1899, 244,135.

TABLE, No. 27.

## PERSONS EMPLOYED—(PROPORTIONS PER 100 TONS).

STATEMENT showing the TONNAGE of SAILING and STEAM VESSELS (registered under Part I. of the Merchant Shipping Act, 1894\*) belonging to the UNITED KINGDOM, ISLE OF MAN,† and CHANNEL ISLANDS (exclusive of Vessels Employed on Rivers, and in Inland Navigation), which were returned as Employed in the Home, partly in the Home and partly in the Foreign, and in the Foreign Trades respectively, in each of the Years 1854, 1860, 1870, 1875, 1880, 1885, 1890, and 1895-99; also the Number of Persons Employed therein, with the Proportion of Persons to every 100 Tons in each Trade and Class of Vessel, Masters not being included previous to the Year 1888.

\* Prior to 1895 the vessels were registered under the Merchant Shipping Acts, 1854 to 1890, which Acts have now been repealed and their provisions re-enacted in the Merchant Shipping Act, 1894.

† Prior to 1892 only such Foreign-going vessels belonging to the Isle of Man for which crews were engaged at ports in the United Kingdom are included.

‡ Including Lascars and Asiatics under Asiatic Articles of Agreement. See note to previous Table.

§ The number of persons employed in 1890, 1896, 1898, 1897, 1899, and 1899, and the proportion per 100 tons, includes masters as well as Lascars and Asiatics. If masters were omitted, as in previous years, the approximate proportion would be—

## ABSTRACT OF THE ABOVE.

## Nationality of Foreigners.

| Nationality. | 1885. | 1895. | Nationality.    | 1885. | 1895. |
|--------------|-------|-------|-----------------|-------|-------|
| Norwegians   | 27    | 28    | Italians        | 4     | -     |
| Swedes       | 44    | 54    | Greeks          | 3     | -     |
| Danes        | 6     | 14    | Austrians       | 2     | 5     |
| Germans      | 23    | 28    | Portuguese      | 2     | -     |
| Dutch        | 6     | 1     | Russians        | 12    | 24    |
| French       | 8     | 3     | Americans       | 28    | 14    |
| Spanish      | 2     | 2     | Other Countries | 2     | 1     |
| Belgians     | 3     | 2     | TOTAL           | 172   | 176   |

Other class care being taken to select those vessels which it has been found possible to trace on the Registers in both of the years 1885 and 1895.

TABLE, No. 30.

## ANALYSIS OF CREWS OF MERCHANT SHIPS (STEAM VESSELS).

COMPARATIVE TABLE showing the Constitution of the Crews of certain British STEAM Vessels

1885.

REPORTS ON LOCAL LIGHTHOUSES, &c.

— No. 2. —

(F. & H. 17,616.)

REPORT by the COMMISSIONERS of NORTHERN LIGHTHOUSES on Inspection  
of LOCAL LIGHTS in 1899.

Northern Lighthouse Board,  
84, George-street, Edinburgh,  
27 February 1899.

Sir,

I AM directed by the Commissioners of Northern Lighthouses to transmit, for the information of the Board of Trade, copy of a Report by the Commissioners' Engineer, dated 16th instant, on his inspection of Harbour and Local Lights in Scotland during 1899, under "The Merchant Shipping Act, 1894," 57 & 58 Vict. c. 60, sect. 652, sub-sect. 4.

Excerpts from the Report are being sent to the various Harbours and Local Authorities concerned.

I am, &c.  
(signed) *James Murdoch*,  
Secretary.

The Assistant Secretary,  
Fisheries and Harbour Department,  
Board of Trade, London.

---

REPORT of Inspection of HARBOUR and LOCAL LIGHTS.

I BEG to report the result of the Inspection of Harbour and Local Lights, made during the year 1899, in terms of the 652nd section of the Merchant Shipping Act, 1894 :—

The following lights were found in good order, namely :—

|              |                 |
|--------------|-----------------|
| Cockenzie.   | Corpach.        |
| St. Andrews. | Uig.            |
| Hopeman.     | Black Mill Bay. |
| Lybster.     | Craignish.      |
| Oban Pier.   | Lamlash.        |
| Portree.     | Kirkcudbright.  |
| Mingary.     |                 |

*Whitehills Harbour*.—A fixed red light has been placed on the outer extremity of the breakwater of this harbour. The light is from paraffin, and is condensed by a dioptric apparatus.

*Duncansby*.—At the time of my inspection this light, which had been sanctioned by the Commissioners, was not in use, but on communicating with the County Council, the light, which is fixed red, has been reinstated.

*Croggan Pier*.—It was found that, although this light was well kept, there was no supply of spare glasses which could be used in case of accident. On communicating with the Authorities, spare glasses have been supplied.

*Stroma Pier Light*.—The light sanctioned by the Commissioners to be exhibited at this pier was not in use at the time of the inspection. The County Council, however, are taking steps to get this light established at once.

*Dunbeath Light*.—This light was not in use at the time of my inspection, but it has now been restored.

*Burnmouth.*—On inspecting the lights at Burnmouth Harbour, it was found that they had not been exhibited for 18 months. The lamps were found to be in a bad state of repair, and I directed the Trustees to have them put right without further delay. The fishermen complain greatly of the want of the lights, and some accidents may happen, if the lights are not exhibited as sanctioned by the Commissioners. The Trustees of the harbour do not, however, seem to appreciate the responsibility they are incurring by not exhibiting the lights.

*Eyemouth.*—On inspecting this light, it was found that the burners required to be renewed, and that the glass of the lantern and reflectors was dirty. I directed the attention of the Harbour Authorities to this state of matters and the defects have been remedied.

*Coldingham.*—It was found that the light apparatus for this harbour was away being repaired, and it has now been satisfactorily done.

*Port Seton.*—This light was found not to be well kept, and the fishermen complain that it could not be seen at any distance. As the incandescent burners, which are used here, require more constant attention than is at present given to them, I advised the Harbour Authorities to take them out and use batwing gas burners, to keep them constantly lighted, if they could not be attended to daily, and to see that the glass panes of the lantern are kept clean. The Harbour Trustees have undertaken that in future this light will be carefully attended.

*Morrison's Haven.*—This light was found to be in a very dirty state, the burner and fountain requiring to be put in order, as well as the inside of the lantern, which was also in a very dirty condition. The Preston-Grange Company have undertaken that this light will be better attended to in future.

*Fisherrow.*—The light at Fisherrow Harbour was found to be not well kept; the reflector was not bright, required to be secured in position, and placed vertically so as to face the light. The Trustees have since taken steps to remedy these defects.

*Whiting Bay, Arran.*—A fixed white light has been erected on the pier at Whiting Bay, which was opened for traffic in the month of February last. This light is well kept.

*Burghhead.*—The reflectors at this harbour require re-silvering, and this the Harbour-Master undertook to get done at once.

*Wick.*—The red light on the pierhead was found to be obscured by an accumulation of white deposit on the lamp glass from the gas used. The reflectors were also not kept brightly polished. I suggested to the Harbour Trustees that it would be well that they deputed one of their number to see that the lights at this important fishing station are properly attended to, and this they have agreed to do.

*Scrabster Harbour.*—This light was found to be well kept, but the reflector required to be re-silvered and a new duplex burner supplied, which the Harbour-Master was to attend to.

*Balintore Harbour.*—The light was so placed that it has been occasionally carried away by the sea, and the Harbour Authorities at present use a temporary light. The re-erection of the permanent light is under consideration.

(signed) *D. A. Stevenson,*

Edinburgh, 16 December 1899.

Engineer.

# LIGHT DUES—(EXEMPTION, &c.), COMMITTEE.

## REPORT.

To the Right Honourable C. T. RITCHIE, M.P., President of the Board of Trade.

SIR,

WE HAVE carefully examined the claims and suggestions submitted to us by you in a Minute dated 10th March 1900, and have the honour to report as follows:—

We were directed to examine the claims and suggestions received by the Board of Trade and the Trinity House for exemption from light dues, or for alteration of the existing scale or rules under the Merchant Shipping (Mercantile Marine Fund) Act, 1898.

These claims and suggestions are consequent on the operation of the Act, by which a complete change was made in the system of levying dues for the erection and maintenance of lights, &c., by the three General Lighthouse Authorities of the United Kingdom.

The previous system was to charge every vessel a separate due for each lighthouse from which it might be assumed to have derived, or to be about to derive, benefit in the course of a voyage. Many complaints were made by shipowners as to the complexity and other disadvantages of that system, and in 1894 a committee (the Mercantile Marine Fund Committee) was appointed by the President of the Board of Trade to inquire *inter alia* into the principles upon which light dues were levied, and to advise what changes (if any) were desirable for adjusting such inequalities in the incidence of light dues as might be found to exist.

The recommendations of that Committee on these points were to abolish the old system of payment “by use,” and to substitute one of payment “by voyage,” and are embodied in the following section of the Merchant Shipping Act (Mercantile Marine Fund) Act, 1898:—

“5.—(1.) On and after the commencement of this Act the General Lighthouse Authorities shall levy light dues with respect to the voyages made by ships or by way of periodical payment, and not with respect to the lights which a ship passes or from which it derives benefit, and the dues so levied shall take the place of the dues now levied by those authorities.

“(2.) The scale and rules set out in the Second Schedule to this Act shall have effect for the purpose of the levying of light dues in pursuance of this Act, but Her Majesty may, by Order in Council, alter, either generally or with respect to particular classes of cases, the scale or rules and the exemptions therefrom.

“(3.) Before any Order in Council is made under this section, the draft thereof shall be laid before each House of Parliament for not less than thirty days on which that House is sitting, and if either House, before the expiration of the thirty days during which the draft has been laid before it, presents an address to Her Majesty against the draft, or any part thereof, no further proceedings shall be taken thereon, but this shall be without prejudice to the making of any new draft Order.”

The Second Schedule to the Act (mentioned in sub-section (2) of the above section) which contains the scale and rules at present in force for levying light dues in pursuance of the Act is as follows:—

### SECOND SCHEDULE.

#### LIGHT DUES.

##### Scale of Payments.

- “1. One penny per ton per voyage for home-trade sailing ships.
- “2. Twopence farthing per ton per voyage for foreign-going sailing ships.
- “3. One penny halfpenny per ton per voyage for home-trade steamers.
- “4. Twopence three farthings per ton per voyage for foreign-going steamers.
- “5. An annual payment in the place of payments per voyage of one shilling per ton for tugs and pleasure yachts.

**" Rules.**

" (1.) A ship shall not in any year be required to make payments on account of light dues—

" (a) if the ship is a home-trade ship, for more than ten voyages; and

" (b) if the ship is a foreign-going ship, for more than six voyages; and

" (c) if the ship makes voyages during the year both as a home-trade and as a foreign-going ship, for more than ten voyages, counting each voyage made as a foreign-going ship as a voyage and a half.

" Provided that no steamer shall be required to pay more than one shilling and fourpence halfpenny per ton, and that no sailing vessel shall be required to pay more than one shilling and a penny halfpenny per ton in any year.

" (2.) A ship shall not pay dues both as a home-trade ship and as a foreign-going ship for the same voyage, but a ship trading from a port outside home trade limits, and discharging cargo or landing passengers or mails at any port within home-trade limits, shall be deemed to be on one voyage as a foreign-going ship, until she has arrived at the last port of discharge of cargo or passengers brought from beyond home-trade limits; and a ship trading to a port outside home-trade limits, and loading cargo or receiving passengers or mails at any port within home-trade limits, shall be deemed to be on one voyage as a foreign-going ship from the time she starts from the first port of loading of cargo or passengers destined for a port beyond home-trade limits.

" (3.) The voyage of a home-trade ship shall be reckoned from port to port, but a home-trade ship shall not be required to pay dues for more than three voyages in one month.

" (4.) The voyage of a foreign-going ship trading outwards shall be reckoned from the first port of lading in the United Kingdom or the Isle of Man of cargo destined for a port outside home-trade limits.

" (5.) The voyage of a foreign-going ship trading inwards shall be reckoned from her last port of lading outside home-trade limits to the last port in the United Kingdom or the Isle of Man at which any cargo laden outside those limits is discharged.

" (6.) Dues payable per voyage under this Act shall be payable and collected only at ports where a ship loads or discharges cargo or passengers or mails.

" (7.) The annual payments shall be payable at the commencement of the year in respect of which they are made, provided that a new vessel shall pay only one penny per ton for each month after the commencement of her first voyage till the first of April following.

" (8.) For the purposes of these rules—

" (a.) A ship's tonnage shall be reckoned as under the Merchant Shipping Act, 1894, for dues payable on a ship's tonnage, with the addition required in section eighty-five of that Act with respect to deck cargo, or in the case of an unregistered vessel in accordance with the Thames measurement adopted by Lloyd's Register.

" (b.) A year shall be reckoned from the day of the month on which this Act commences.

**" Exemptions.**

" There shall be exempted from dues under this Schedule :—

" Her Majesty's ships;

" Ships belonging to foreign Governments;

" Sailing ships (not being pleasure yachts) of less than one hundred tons, and all ships (not being pleasure yachts) of less than twenty tons;

" Vessels (other than tugs or pleasure yachts) when navigated wholly and *bonâ fide* in ballast, on which no freight is earned and without any passenger;

" Ships putting in for bunker coal, stores, or provisions for their own use on board;

" Vessels for the time being employed in sea fishing or in sea fishing service, exclusive of vessels used for catching fish otherwise than for profit;

" Ships putting in from stress of weather, or for the purpose of repairing, or because of damage, provided they do not discharge or load cargo other than cargo discharged with a view to such repairs, and afterwards re-shipped;

" Yachts and pleasure boats of under five ton registered shipping tonnage."

The same Act abolished the Mercantile Marine Fund and created a fund, called the General Lighthouse Fund, to which all light dues levied under the Act by the General Lighthouse Authorities are now carried. The General Lighthouse Authorities are the Trinity House, the Commissioners of Northern Lighthouses, and the Commissioners of Irish Lights.

The claims and suggestions for alteration in the scale and rules which have been received down to the present date will be found in the correspondence, &c., printed in the Appendix, and may, with a few exceptions, be divided into two classes :—

1. Claims for total exemption in respect of certain voyages, on the ground that none of the lights, &c., erected and maintained at the expense of the light dues are of any use to vessels when engaged on those voyages.

2. Claims to partial exemption, on the ground that the light dues on certain voyages are heavier under the present than under the old system.

*I.—Claims for total exemption in respect of certain voyages, on the ground that none of the lights, &c., erected and maintained at the expense of the light dues are of any use to vessels when engaged on those voyages.* Letters Nos. 1 to 66.

This class includes claims from owners of vessels plying on inland waters like Lough Erne, Ullswater, Lough Derg, and the Norfolk Broads; and also on rivers, canals, harbours, and the coast. The reasons alleged for exemption may be said to be generally the same in principle, but they differ somewhat in detail. The traders between Fleetwood and Morecambe, the Joint Committee of the South-Western and Brighton Railway Companies (as regards their traffic between Portsmouth and Ryde) and others base their claim only on the contention that they make no use of the lights maintained at the expense of the General Lighthouse Fund. The Clyde Steam Ship Association and other shipowners trading on the Clyde point out also that their vessels carry goods between Glasgow and Greenock, and that there are no lights between Glasgow and Greenock under the control of the Northern Lighthouse Commissioners, the river between these points being lighted by the Clyde Navigation Trust. Other owners, like Mr. David MacBrayne and the Glasgow and South-Western Railway Company, whose vessels navigate the Clyde, point out that they have to pay light dues to this Trust.

Similar applications have been received in respect of certain vessels navigating the Mersey and the Manchester Ship Canal, which have to pay light dues to the Mersey Navigation Commissioners, and which ply only in waters which are neither lit nor marked by the General Lighthouse Authorities.

Others complain that they are paying light dues in respect of (a) voyages upon which they had to pay no light dues under the old system, (b) voyages by daylight only, (c) voyages on inland waters or within port, (d) ferry boats, (e) vessels employed as tenders only to other vessels in respect of which light dues are paid by their owners.

In reference to these points we would observe—(a.) The Act has established a new system of levying light dues which applies to these vessels, and we are of opinion that the fact that dues were not previously payable is not of itself sufficient to justify a continued immunity, unless it also involves a manifest injustice or inequality; (b.) Vessels, navigating by daylight only, benefit by unlighted buoys or beacons, they also benefit by lighthouses, which in the day time serve as landmarks, and by fog signals, all of which are provided and maintained at the expense of the General Lighthouse Fund; and it often happens that so-called “daylight voyages” do not terminate till after dark; (c.) The word “port” includes place, and we are advised that a voyage between any two places is a voyage within the meaning of the Act, even if they are both within the limits of a district which is treated as one “port” for other purposes; (d.) There seems no reason why ferry-boats should be exempted more than any other class of vessel, provided they ply in waters lit or marked by the General Lighthouse Authorities at the expense of the General Lighthouse Fund; (e.) Such tenders are clearly ships within the meaning of the Act, and are employed on valuable services, which could not be performed by the “other vessels.”

After careful consideration of all applications in this class we have come to the conclusion that there is only one ground advanced for total exemption from light dues, which we are prepared to admit, and that is, that a vessel during a voyage could have derived no benefit whatever from a light or mark maintained at the expense of the General Lighthouse Fund. This ground we regard as valid, for the following reasons:—

It is true that the Act clearly abolishes the system of paying “by use” by enacting that the “General Lighthouse Authorities shall levy light dues with respect to the voyages made by ships or by way of periodical payment, and not with respect to the lights which a ship passes or from which it derives benefit, and the dues so levied shall take the place of the dues now levied by those authorities,” but we do not think that it was intended or that it

would be just that light dues should be levied on ships which derive no benefit whatever from lights or marks maintained at the expense of the General Lighthouse Fund.

Nevertheless there is nothing in the Act which specifically exempts such cases; if they are to be exempted, an Order in Council under Section 5 (2) of the Act will be necessary.

We therefore recommend that no dues should be levied in respect of voyages entirely performed in waters neither lit nor marked by the General Lighthouse Authorities at the expense of the General Lighthouse Fund, and that any dues which have been paid since the commencement of the Act in respect of such voyages should be refunded.

With reference to this class of application we have been furnished by the Trinity House with the opinion of their Examining Committee as to the lights and seamarks maintained by the General Lighthouse Authorities on the routes taken by the vessels referred to in the correspondence. From this it would appear that, if our recommendation is adopted, exemptions would be granted to voyages within the following limits in respect of which exemption has already been claimed:—

| <i>Limits.</i>   | <i>Applicants.</i>   |
|--|--|
| 1. Between Runcorn and Liverpool and on the Manchester Ship Canal. | The United Alkali Co. of Liverpool.<br>Messrs. J. Crosfield and Sons.<br>Messrs. Monks, Hall, & Co.<br>The Manchester and Liverpool Transport Co.                              |
| 2. Between Fleetwood and Morecambe                                 | - Inquiry by the Collector of Customs.   |
| 3. Between Portsmouth and Ryde                                     | - London, Brighton, and South Coast Railway Co.<br>London and South-Western Railway Co.  |
| 4. Within the River Tees between Middlesbrough and Stockton.       | - Corporation of Middlesbrough, through the Collector of Customs.  |
| 5. Ferry in Milford Haven  | - Coram & Co.<br>Great Western Railway Co.<br>City of Cork Steam Packet Co.  |
| 6. Ferry between Anglesea and Carnarvon                            | - Mr. Owen Lewis.  |
| 7. On Lake Ullswater   | - The Ullswater Steam Navigation Co.   |
| 8. On the Norfolk Broads   | - The Collector of Customs, Lowestoft (on behalf of owners).   |
| 9. On the Caledonian Canal   | - Mr. David Macbrayne.   |
| 10. Between Glasgow and Greenock                                   | - The Clyde Steam Ship Association.<br>Messrs. Steel and Bennie.<br>The Glasgow and Greenock Shipping Co.<br>The Glasgow and South-Western Railway Co.<br>Mr. David Macbrayne. |
| 11. Ferry on the River Tay   | - The Dundee Harbour Trustees.   |
| 12. Between Cork, Blackrock, and Passage                           | - The Cork, Blackrock, and Passage Railway Co.   |
| 13. On Lough Derg  | - The Collector of Customs, Limerick (on behalf of owners).  |
| 14. On Lough Erne  | - The Lough Erne Steamboat Co.   |

While, however, we recommend that exemption should be granted in respect of voyages in waters neither lit nor marked at the expense of the General Lighthouse Fund, we are unable to support any application in respect of voyages in waters so lit or marked. To grant exemption, or even partial exemption, on the ground that the lights or marks passed are few or of slight advantage would, in our opinion, involve too serious a departure from the principle of the Act. It may be added that it would be impossible to draw a line where such concessions should stop. The question of comparative use being once started, claim would succeed claim until the present system would become as complicated as the old, the principle of which would be practically restored.

Letters  
Nos. 67 to 98.

*II.—Claims to partial exemption, on the ground that the light dues on certain voyages are heavier under the present than under the old system.*

Claims of this kind have been received from shipowners and others engaged in the Baltic\* and North German trades from the east coast of Great Britain, the Australian trade, the Irish trade, the stone trade between North Wales and Liverpool, and the towing barge trade between the Tyne and the Tees.

\* The term "Baltic Trade" includes trade with ports on the coasts of Norway and Sweden.

There is no doubt that the effect of the change in the system of levying light dues has been to increase considerably the charges on vessels going to the Baltic from the east coast. The Hull Chamber of Commerce give the following table relating to four ships exclusively engaged in the Baltic trade, which will have to pay collectively during the year between three and four times as much as before:—

Letter  
No. 72.

|                   | Number of Voyages made in 1897. | Light Dues paid in 1897. | Will Pay under New Scale. | Loss.    |
|-------------------|---------------------------------|--------------------------|---------------------------|----------|
|                   |                                 | £ s. d.                  | £ s. d.                   | £ s. d.  |
| s.s. Milan        | 7                               | 21 11 8                  | 70 16 0                   | 49 4 9   |
| s.s. Bride        | 9                               | 18 11 0                  | 62 17 0                   | 44 6 0   |
| s.s. Joseph Somes | 8                               | 16 13 9                  | 53 19 0                   | 37 5 3   |
| s.s. Southella    | 6                               | 11 13 8                  | 57 6 6                    | 45 12 10 |

Sir Albert Rollit, M.P., gives lists of nine steamers belonging to Messrs. Bailey and Leetham which will pay about 49½ per cent. more, and of 19 steamers of Messrs. T. Wilson, Sons, & Co., in respect of which the increase is about 150 per cent. Other tables are contained in the correspondence to show that the increase is not confined to vessels engaged only in the Baltic trade, but that some mainly engaged in that trade, but making one or two voyages to the Mediterranean, also have to pay 50 per cent. more.

Letter  
No. 73.

The Grimsby Timber Importers' Association complain of the increased charges on cargoes of timber from Baltic and Russian ports, which they estimate at about eight times as much as under the old.

Letter  
No. 77.

Mr. F. Hartmann, of Goole, who has a large coal business to the Baltic ports, while giving no figures, declares that it will practically kill his trade.

Letter  
No. 78.

All these complaints and claims come from shipowners and others engaged in trade from the east coast of Great Britain to the Baltic. No complaints have been received in respect of the Baltic trade from ports on the west or other coasts of the United Kingdom, but a strong protest has been received from the Liverpool Steamship Owners' Association against granting any exemption to vessels engaged in the Baltic trade from the east coast. They point out that vessels sailing from that coast, if they have to pay a higher rate per ton in the Baltic trade, pay very much less in their other trades—east, south, Mediterranean and American, and with regard to the Baltic trade only it is obvious that if the claims of the east coast traders are admitted they will be granted a privilege which will act to the disadvantage of all others engaged in the Baltic trade.

Letter  
No. 79.

Though perhaps the figures given in these claims from the east coast Baltic trade may be open to some revision, they are sufficiently accurate to be accepted as evidence that this trade has under the new system to pay sums considerably in excess of what it had to pay under the old. But such evidence is scarcely necessary when we remember the increase in the rate per ton under the present scale. Under the old system a due was paid for each light passed, but the lights on the routes from the east coast to the Baltic were so few and the dues were so subject to deductions of various kinds that in some cases they almost disappeared. Thus, the full dues for a voyage by steamship from Hull to the Baltic by the direct route were 1 7/8d. per ton, but this was reduced by 50 per cent. and the residue by 65 per cent., so that the actual dues payable by a steamship were 1/4d. per ton only.

By this it will be seen that the light charge per ton on a single voyage from Hull to the Baltic by the direct route is 11 times as much as it used to be, but ships did not always take the direct route, their trade causing deviation from it which entailed payment for other lights. Messrs. Bailey and Leetham's tables show an average of about 1 1/4d. under the old system, and Messrs. Wilson's one of over 1/2d. per ton per voyage out and home (i.e., two voyages under the present system). Moreover, the effect of the

difference between the old and new rates is greatly modified by the fact that vessels now pay for six voyages only, whereas they used to pay for all. The average number of voyages of the Wilson Line would appear to be about 22 (ranging from 10 to 48) in the year, and 318 out of the 432 voyages made would be free under the new scale.

The tables given of specific voyages by Messrs. Bailey and Leetham's and Messrs. T. Wilson and Sons' vessels work out at 11*d.* per ton and 6½*d.* per ton per year respectively.

The rate from Hull and every other port in the United Kingdom to the Baltic is now 2¾*d.* a ton per voyage, with a maximum for the year of 1*s.* 4½*d.*

On the whole, though on certain vessels engaged in the Baltic trade (like those mentioned in the table on page 7) the charges may amount to four or five times as much as under the old system, the general burden cast on the Baltic trade as a whole may be fairly taken as very much less.

An increased charge, when applied to large fleets of steamers, must necessarily amount to large sums, but when we consider the complaints of "hardship," "injustice," and the like, applied to these increased charges, we must also take into account the circumstances which led to them and the charges paid before. They are one and all the result of the inequalities of the old system which the present Act was passed to correct. Under the old system, one port of the United Kingdom was in many ways, and sometimes very severely, handicapped against another in the same trade simply on account of its position on the coast.

A ship from London to Dublin paid 31*d.* a ton, while one from Liverpool only 043*d.*; a ship from Leith to the Mediterranean paid 5·98*d.* a ton, and one from Falmouth 79*d.*; or to take the Baltic trade again, a vessel from Liverpool to the Baltic paid 2·63*d.* per ton, while one from Hull paid 25*d.*, per ton only, and this notwithstanding that the Liverpool steamer had a longer voyage, involving more time, more wages, and greater risk. In this and other cases in which a shipowner has to pay more than before, the extra payment may be generally regarded as the measure of the advantage which he under the previous system had over other British shipowners engaged in the same trade from a different port, and as a removal of an old inequality rather than the creation of a new one.

It is not to be disputed that many shipowners, while paying more than before on one route, will pay so much less than before on others that they will gain on the whole by the new system, and it is manifest that such owners cannot from a personal point of view have any complaint against the new system. The rest—take for instance those engaged in the Baltic trade only—will doubtless suffer more than those who are engaged in other trades as well as the Baltic, but it does not appear to us to be equitable to charge a shipowner less for a particular trade because he does not employ his vessels in other trades, while any such differential treatment would be, in our opinion, contrary to the principle of the Act, and a cause of just complaint from other shipowners.

An equal, if not a greater injustice, would be done if any distinction were made in favour of a portion of the same trade; if, for instance, a reduction of dues were made in respect of voyages from Leith to New York and not in respect of voyages from Liverpool to New York.

There still remains the question whether some reduction might be made in favour of the whole Baltic trade without regard to the difference of rates under the new system, whether favourable or unfavourable. This question is of the more importance as a representation has been made by the German Government on the subject. The memorandum of the German Chargé d'Affaires states that the German traders represent themselves as heavily struck in their shipping with England by the new tariff, and suggests that the scale for the home trade should be extended to the Baltic traffic, or that the annual contribution from that traffic should be reduced to an amount equivalent to three times the unit established for a foreign-going ship. The latter suggestion would reduce the yearly maximum payable by a ship engaged in the Baltic traffic to 8½*d.* per ton, or less by 6¾*d.* than is paid by home-trade vessels. It is, therefore, not regarded as practicable by your Committee.

As to the extension of the home-trade scale to all vessels in the Baltic traffic, we have carefully considered whether there is anything in the conditions of this traffic which would justify a reduction in the scale at present applicable to the whole of the foreign trade.

The only condition of the traffic which would seem to justify consideration in this connexion would appear to us to be the closing of the Baltic by ice for a portion of the year, but when we regard the number of voyages to the Baltic which can be completed during the year, and the number of shipowners who employ the same vessels in other trades when the Baltic is closed, we cannot see any sufficient justification for placing the Baltic traffic on a different footing with regard to light dues from the rest of the foreign trade.

Another important consideration is the serious loss to the revenue of the General Lighthouse Fund which would be entailed by such a change. But this is not the only loss which the fund would in all probability sustain if the concession were granted. If it were granted to ports north of the present home-trade limits, the case of ports south of them would also have to be considered. Under the old system the Baltic trade and the trade to ports between Brest and Gibraltar were treated on the same footing. They constituted what was called the "half oversea" trade, with rates higher than those of the home trade but lower than those of the "whole oversea" or foreign trade. We do not know on what ground that which was granted to the Baltic trade could be refused to the trade with ports south of Brest on the west coast of Europe.

We regret that, for these reasons, we are unable to recommend an alteration of the scale in accordance with the suggestions of the German Government, but we do not think that German shipowners will have any legitimate ground for complaint while German and British ships have to pay the same dues.

Representations have also been made on the part of the Australian trade as to the consequences of the new scale. They are expressed in a letter from the General Shipowners' Society and another from fourteen steamship companies, including the Peninsular and Oriental, the British India, the New Zealand, the Shaw Savill and Albion, and other important companies. The General Shipowners' Society mention the case of a firm of shipowners who have sent them a statement, from which it appears that they will pay 1,882*l.* 14*s.* 4*d.* under the new tariff as against 1,786*l.* 17*s.* 1*d.* under the old, or an increase of 95*l.* 17*s.* 3*d.* on the year. The letter signed on behalf of the fourteen companies is more general and contains no estimate of losses under the new tariff. The Trinity House have, however, furnished us with the following comparative statements showing the net rates per ton chargeable on this trade under the old and new systems and the amounts payable per 1,000 tons respectively, from which it appears that the Australian trade from Glasgow and Newcastle will gain considerably by the new tariff, that the charges on the trade from Liverpool will be the same as before, and that the trade from London will have to pay an increase of 0·39*d.* a ton per voyage.

Letters  
Nos. 81  
and 82.

| From            | Rate.     |           | Amount.               |      |                     |
|-----------------|-----------|-----------|-----------------------|------|---------------------|
|                 | Old.      | New.      | Old.                  | New. |                     |
|                 | <i>d.</i> | <i>d.</i> | £ <i>s.</i> <i>d.</i> | £    | <i>s.</i> <i>d.</i> |
| Newcastle - - - | 4·28      | 2·75      | 17 17 4               | 11   | 9 2                 |
| London - - -    | 2·36      | "         | 9 16 11               | "    | "                   |
| Liverpool - - - | 2·73      | "         | 11 7 11               | "    | "                   |
| Glasgow - - -   | 5         | "         | 20 16 8               | "    | "                   |

It has been represented to us that the voyages in this trade are so long that the vessels engaged in it cannot obtain the same benefit from the exemption after six voyages as will be enjoyed by other trades, the Atlantic trade for instance, but after taking this point into consideration we are still unable to recommend any alteration in the present scale in favour of the Australian trade.

Letters  
Nos. 83 to 88.

Nor are we able to recommend that any alteration should be made in respect of the Irish trade, representations concerning which have been received from the London and North-Western Railway Company, the City of Dublin Steam Packet Company, and the Drogheda Steam Packet Company. The dues under the old system were extremely light, that to Dublin from Holyhead being  $\frac{1}{4}d.$ , with abatements of 50 and 65 per cent., and a further abatement of 50 per cent. if the lights were passed twice in 24 hours between midnight and midnight; they are now  $1\frac{1}{2}d.$  from and to any port in the Home trade, with exemption after 10 voyages. It is stated by the London and North-Western Company, writing when the old system was still in force, that "The feature in the present mode of levying the dues appears to be " where the voyages, or rather passages, are made there and back between " midnight and midnight only single dues are charged, whereas no such " difference is made between different classes of voyages in the scale " of the Bill." It seems to us that the large number of voyages made by these Irish steamers, the exemption from payment after 10 voyages, and the rule that home-trade ships are not required to pay dues for more than three voyages in one month, counteract any supposed grievance arising from this difference of practice.

Letter  
No. 86.

By the City of Dublin Steam Packet Company's letter of the 19th May 1900, it would appear that the charges on their steamers for the last year were 147l. 4s. 10d. more than they would have been under the old system. This is an increase of 50 per cent., but the Committee cannot suggest that the rules applicable to the whole home-trade should be relaxed on account of this addition to the previous charges.

Letter  
No. 89.

A stronger case than any others we have as yet commented upon, if the increase in dues payable is alone regarded, is presented by the "Justice League" in respect of steamers engaged exclusively in the stone trade between North Wales and Liverpool. These vessels used to pay about  $\frac{1}{10}d.$  per ton and now have to pay  $1\frac{1}{2}d.$  They are all apparently of the same tonnage, 72 tons, and make about 30 voyages in the year, for which they paid a gross sum of 17s. 6d. They would now pay 4l. 10s., or more than five times as much.

Letter  
No. 90.  
Letters  
Nos. 91 to 95.

Still stronger from this point of view are the cases of steamers trading between West Hartlepool and Hamburg, which pay 10 times as much, and of barges towed between the Tyne and the Tees, which pay about 13 times as much under the new system as under the old. The whole fleet of these barges, with a total tonnage of 1,729 tons, paid only 0·7d. per ton for the whole year, or 5l. 6s. 4d., whereas now they pay 72l. 0s. 10d. These barges make from 33 to 55 voyages in the year.

The Tyne Wherry Company base their application not only on the increase of charge, but on the nature of the craft, of the work in which they are engaged, and of the voyage. They say:—

"1st.—These barges are rigged with one jury mast, with foresail and jib to steady them. They depend entirely for their motive power on *towage* and are always in tow; *they are neither sailing vessels nor steamers*, they are a class of themselves, and as such should be exempt, or should be allowed to continue as at present.

"2nd.—These barges are engaged under contract in carrying raw material, viz., ore, pig-iron, salt, &c., at very low rates to and from the works and manufactories on the Tyne and Tees. The class of work is such that we do not compete with sailing vessels or steamers, because the works and factories must have frequent and regular supplies, and, therefore, cannot depend on sailing vessels, and, on the other hand, steamers will not undertake this work because of the nature of the berths and the very slow despatch in loading and discharge.

"3rd.—The voyage in tow from the Tyne to the Tees and *vice versa* only occupies  $4\frac{1}{2}$  hours from bar to bar, and we only pass two lights, viz., Souther Point and Hartlepool Heugh, and we claim that the amount we already pay is fully sufficient for the service we receive."

Though these barges are generally towed, they are rigged with a mast with foresail and jib. They are "ships" within the meaning of the Merchant Shipping Acts, while the number of voyages they take is very large.

Some still more remarkable instances have been given in respect of vessels running to the German coast, some in the home trade and others in the foreign trade. We are, however, unable to advise that even in such cases there is sufficient justification to relieve the owners of any portion of the rates now levied on all other vessels engaged in the same trade whether home or foreign. Letters  
Nos. 96 to 98.

Mr. P. Brown, of North Shields, calls attention to a grievance of another character. He points out that vessels trading to the River Eider have to pay foreign rates, while those trading to the Elbe pay home-trade rates. There is a distance of less than 20 miles between the mouths of the two rivers and we are of opinion that the scale for the home trade may properly be extended from the Elbe to the Eider. Letter  
No. 96.

In conclusion, we would submit that the view which appears to be entertained by some of the correspondents that it was the intention of the Act that no shipowner should pay more for light dues than under the old system is without foundation. The intention of the Act, so far as it relates to the levy of light dues, was to abolish a system which was complicated and unequal, and against which the strongest protests had been made by the shipping interest, and to substitute for it a more simple system and one more generally equitable between shipowner and shipowner. A very slight consideration is sufficient to show that this result could not be obtained without shifting some portion of the light dues from some voyages to others, and therefore from some shipowners to others; while other results have been to reduce the total yearly burden of the light dues to the extent of over 100,000*l.*,\* and to make the dues the same to all vessels engaged in the same trade whatever route they might take. The very small charges for some voyages under the old system have made the new system fall heavily on some of the complainants, while some of those who formerly paid higher rates have gained a considerable advantage; but this result was inevitable. The principle upon which the Act was founded was recommended by a committee upon which shipowners were strongly represented, and the Act was considered by a Standing Committee of the House of Commons specially strengthened by shipowning members. We see, therefore, every reason to hope that even the shipowners who suffer most by the provisions of the Act will be content to bear such an additional burden as it casts upon them without pressing for special privileges, the grant of which would subvert the principle accepted by their representatives for the benefit of the whole shipping interest.

The case of yachts which are laid up has also been considered by the Committee. We are advised that their owners are liable under the Act to make the annual payment, even though they never make a trip during the whole year. The Act has not, however, been put into operation with regard to such yachts, and we recommend that they should be formally exempted. Letter  
No. 26.

We, therefore, confine our recommendations to the following:—

1. That no light dues should be levied in respect of voyages entirely performed in waters neither lit nor marked by the General Lighthouse Authorities at the expense of the General Lighthouse Fund.
2. That all dues already levied in respect of such voyages should be refunded.
3. That the home-trade scale should be extended to voyages to ports between the Elbe and the north bank of the Eider inclusive.
4. That no annual payment should be required in respect of yachts which are laid up during the whole of any year ending 31st March.

---

\* The actual figures for 1898-9 and 1899-1900 were 624,297*l.* and 498,838*l.*, respectively.

The absence of Captain Vereker's name from the signatures to this Report is only too fully explained by his lamented death. We had the benefit of his valuable advice throughout nearly the whole of our proceedings and were assured of his concurrence in all our recommendations, with the exception of the fourth, which on account of his ill-health was never submitted to him.

We cannot conclude our report without recording our high appreciation of the valuable services of our secretary, Mr. Taylor, and of the zeal and ability with which they have been rendered.

We have the honour to be,

Sir,

Your obedient servants,

(Signed) COSMO MONKHOUSE,  
Chairman.

MINUTE OF APPOINTMENT.

---

AT THE COUNCIL CHAMBER, WHITEHALL,  
this 18th day of April 1899.

PRESENT.

The Right Hon. CHARLES T. RITCHIE, M.P.

The Board of Trade are pleased to appoint

The EARL OF DUDLEY (Chairman),

Captain A. J. G. CHALMERS,

Mr. JOHN CLARK HALL,

Mr. WALTER J. HOWELL,

to be a Committee to consider and report on the steps which should be taken with a view to the introduction of a system of continuous discharges for seamen.

The Board of Trade are further pleased to appoint Mr. C. HIPWOOD to act as Secretary to the said Committee.

(Signed) CHAS. T. RITCHIE.

---

## REPORT.

TO THE RIGHT HONOURABLE C. T. RITCHIE, M.P.,  
&c., &c., &c.,  
PRESIDENT OF THE BOARD OF TRADE.

SIR,

In compliance with your Minute of the 18th April last we have considered what steps should, in our opinion, be taken with a view to the introduction of a system of continuous discharges for seamen. In the course of our enquiries we have directed our attention to the history of the present certificates of discharge and of the previous attempts that have been made to establish continuous certificates, and have also examined witnesses representing shipowners, shipmasters, seamen, and others.

(2.) We find that the use of certificates of discharge was first recognised by statute in 1729, and that they were again dealt with in 1796, but in neither case was there any specific enactment that such certificates were to be given to all seamen upon discharge. 2 Geo. II.,  
c. 36, s. 6.  
37 Geo. III.,  
c. 73.

(3.) In 1835 an Act was passed which entitled seamen to certificates of discharge, specifying the service they had performed, and in 1844 it was provided that these certificates should be on a particular form, but neither of these Acts provided for a report on conduct, character, and qualifications. 5 & 6 Will. IV.  
c. 19, s. 13.  
7 & 8 Vict.,  
c. 112, s. 13.

(4.) In 1850, however, it was enacted that seamen discharged before a shipping master\* might, if they chose, have a copy of the master's report on their conduct, character, and qualifications given to them, or endorsed on their certificates of discharge. This has continued to be the legal position up to the present day, but in practice every seaman so discharged receives a certificate containing a record both of his service and character, as it has not hitherto been understood generally by seamen that it rested with them to decide whether they would have the report of character endorsed on their certificates or not. 13 & 14 Vict.,  
c. 93, s. 99.

(5.) Various attempts have from time to time been made to adopt a system of continuous discharge certificates for seamen, viz. :

(a) In 1857 the Board of Trade issued a form of continuous discharge certificate, for which each seaman had to pay 1s. It contained provision for a report by the master on the ability, conduct, and sobriety of the seaman. Its use was purely voluntary, and the ordinary discharges continued in force at the same time. A considerable number of these certificates was issued during the first two years, but subsequently the demand fell off, the experiment was deemed to be a failure, and the form was withdrawn.

(b) In 1885 another form of continuous record of service was issued by the Board of Trade. This did not provide for any report of character; it was issued to only a few of the principal ports, and does not appear to have been brought specially to the notice of shipowners and masters, very few of whom at the present time know even of its existence. Its use was voluntary, and the ordinary discharges continued to exist at the same time. Only a limited number of these certificates has been issued.

(6.) These, we believe, are the only actual attempts that have been made to introduce continuous certificates of discharge in this country. Other movements, however, in the same direction have taken place, and these should be noticed, as of some interest.

---

\* These officers are now called Superintendents of Mercantile Marine Offices.

(7.) In 1882 leather cases in the shape of pocket books were provided, which seamen could buy for 6*d.* each, for keeping together the ordinary single-sheet discharges. Over 100,000 of these cases have been issued; but it should be borne in mind that they do not necessarily supply a continuous record of a seaman's service, but merely hold together such of his single-sheet discharges as he thinks fit to keep.

(8.) All men belonging to the Royal Naval Reserve are required to have a book containing a continuous record of their service in addition to the single-sheet discharges which all seamen receive. These books contain no record of character; they apply only to Reserve men, and they are maintained in operation by the fact that the Reservists' retainer cannot be obtained without them.

(9.) The Shipping Federation which, we are informed, includes about nine-tenths of the shipping of the United Kingdom, has instituted a registry and benefit system for the encouragement of steady seamen, and all seamen who desire to share in the benefits of this system are required to hold books containing a continuous record of their services. These books seldom contain any record of conduct, and are maintained in operation simply by benefits given by the Federation.

(10.) Continuous records of service are, we are informed, used for merchant seamen in Sweden, Norway, and Germany. None, however, provide for a record of the seaman's character. The Swedish book appears to have been instituted in connection with a seaman's pension fund, and the Norwegian and German books in connection with the laws as to naval and military service.

(11.) Continuous discharge certificates containing records of character have for some time been adopted for Lascar seamen shipping from the port of Bombay. The system appears to have worked well, but it applies at only one port, and there are facilities for applying a plan of this kind to natives which do not exist in the case of Europeans.

(12.) It will be seen that none of the certificates we have described are general and compulsory in their application, and at the same time admit of a record of character being entered in them, and that the experiments made in England in 1857 and 1885 were so incomplete in their nature, and were made in such circumstances, that they cannot be regarded as fair tests of the value or otherwise of a system of continuous discharge certificates.

(13.) The fact that these experiments were made, however, is evidence that there was a demand in this country for such certificates, and it is the fact that their introduction was recommended by the Royal Commission on Loss of Life at Sea in 1887, and by the Manning Committee in 1896. The witnesses before us have generally stated that it would do good, and some have strongly urged that it should be adopted.

(14.) It has been stated to us in evidence, and we concur in the view, that the present single-sheet discharges are unsatisfactory in many respects. The forms provide for no personal description of the holder, duplicates are easily obtained, and no difficulty is placed in the way of suppressing unfavourable discharges. Thus every facility is given for personation, and crimps and others have no difficulty in obtaining discharges, which they are able to use for their own purposes. Masters of ships, finding the system unreliable, do not always take pains to give the seaman the character he deserves. The consequence is that officers when engaging their crews cannot be sure that the discharges presented to them contain a true or complete record of the service and character of the man before them. On the other hand, it is urged that, if a proper form of continuous discharge certificate were adopted, officers would have more reliable information as to the men they were engaging, and that the men, knowing that particulars of their service, conduct, character, and qualifications were to be recorded in a permanent form, would be more careful in their behaviour, and thus discipline would be improved, and personation made at least more difficult.

(15.) We are impressed by these arguments, and advise that a system of continuous discharge certificates should be introduced under careful regulations, and after sufficient notice to all concerned. We have not thought it desirable to consider any scheme which would involve legislation. Under the present law it is left to the Board of

Trade to prescribe the form of certificate of discharge, and if they prescribe a continuous form of certificate as the only form to be used when seamen are discharged before a superintendent in the United Kingdom, a seaman must take this form or none. This is the only compulsion that can be used to enforce continuous discharge certificates, and it is to be observed that there is no power to require that the certificate shall contain a record of conduct, character, and qualifications. We are advised that, under the present law, it rests with the seaman to decide whether he will have the record of his character endorsed on the certificate of his discharge or not; and we think it is clearly contemplated by the Statute that he should have it so endorsed if he desires.

57 & 58 Vict.,  
c. 60, s. 129.

(16.) We accordingly recommend that the form approved by the Board of Trade for use in the case of seamen discharged before a superintendent in the United Kingdom, should be a continuous certificate of discharge in book form, that it should be the only form prescribed for use in such cases, and that it should provide for the endorsement upon it, if the seaman desires, of a copy of the master's report of his conduct, character, and qualifications.

(17.) We also recommend that a form should be provided upon which the seaman can, if he wishes, have a separate copy of this report, instead of having it endorsed on his discharge certificate.

(18.) To change the form of discharge used in the foreign trade, and to substitute, for the present single sheets, books containing a description of the holder as well as a record of his service and character, is calculated, if undertaken all at once, to throw too great an amount of work on the Mercantile Marine Offices, and to delay the engagement and discharge of crews. The number of seamen of all ratings in the foreign trade is estimated at 128,000. We recommend that the continuous certificates should first be applied to deck hands (53,000), then, at suitable intervals, to engine-room hands (25,500), stewards, &c. (26,500), and certificated officers (23,000).

(19.) In estimating the cost of effecting the change and maintaining the new system in operation, it is necessary to decide in the first place whether a central registry shall be established or not. The main advantages of keeping at a central office a register of all the books issued, together with a record of the services entered in them, are that it would probably tend to prevent misuse of the certificates and so check desertion, and would also enable lost certificates to be replaced without undue delay. The expense, however, in addition to the initial cost of over 5,000*l.*, which would be incurred in any case, would be about 1,800*l.* a year; and, looking to the fact that the certificate we recommend is simply to be introduced as an experiment and in substitution for the present form, we do not think there is sufficient justification for incurring so large an expense.

(20.) The difficulties in the way of forming a reliable estimate of the cost of the lesser scheme we recommend are considerable, but we think the initial expenditure may be roughly estimated as follows:

|  |           |        |
|--|-----------|--------|
|  |           | £      |
| Continuous Discharge Books (128,000 at 52 <i>s.</i> per 100) | - -       | 3,328* |
| Clerical assistance at Mercantile Marine Offices             | - -       | 1,700  |
| Incidentals, including standards for taking height           | - -       | 100    |
|  |           | <hr/>  |
| Total initial cost   | - - - - - | £5,128 |
|  |           | <hr/>  |
| And the annual expenditure—                                  |           | £      |
| 8,000 Continuous Discharge Books (new issues and renewals)   | -         | 208*   |
| Clerical assistance  | - - - - - | 375    |
|  |           | <hr/>  |
| Total annual cost  | - - - - - | £583   |
|  |           | <hr/>  |

\* Against this must be set off the cost of the present discharge certificates. A continuous discharge book to contain a record of 40 voyages will cost slightly over 6*l.*; 40 of the present discharge certificates cost just about the same amount. Therefore, the mere substitution of books for single sheets will, in itself, not ultimately entail any extra expense, and the net cost of introducing the new scheme will be—initial cost, 1,800*l.*; annual cost, 375*l.*

(21.) The initial and the annual cost would be greatly reduced if the seamen were required to pay for the books. But, although the price charged would be small (6d. each), and the books might be more valued if so bought, we do not think it advisable (even if there is power to do so) to mark the introduction of a new system by charging the men for a form with which they have hitherto been provided free of expense.

(22.) We are aware that a system of this kind will not fully meet the views of all parties, and that opinions for which we have great respect have been expressed, that a system of continuous discharges cannot be completely successful unless supported by fresh legislation.

(PP-C. 4700,  
p. 19.)

(23.) It was, for instance, stated in a report to the Board of Trade in 1886, by the then Assistant Secretary for the Marine Department, that continuous discharges would be useful to every one except, perhaps, some seamen, but that it would be impossible to maintain them without stringent laws as to rating and manning, and that even then they would probably be a failure.

(24.) But conditions have materially changed since 1886, and we think that so despondent a view of the matter need not be taken now. We would, moreover, again call attention to the fact that the official attempts to institute continuous discharge certificates were incomplete and were not fully made known to those concerned.

(25.) It has, further, been represented to us that all seamen should be compelled to have continuous discharge certificates, and to have their character entered on them each voyage. Some witnesses have advocated the adoption of certificates of competency for seamen, and others have recommended that quasi-magisterial powers should be conferred on superintendents of mercantile marine offices, to settle disputes between masters and seamen as to character.

(26.) We are unable to adopt any of these suggestions. We regard them, in fact, as being outside the terms of our reference, and as involving legislation. The adoption of any one of them would, moreover, probably provoke opposition; whereas the more limited action we advise will, we believe, be approved or acquiesced in by all or nearly all concerned.

(27.) We are not sanguine enough to think that a mere change in the form of the discharge certificate will effect any immediate or radical alteration in the character of merchant seamen; but while there is no doubt that the present form is unsatisfactory, there is reason to believe that a continuous form of certificate would go far to meet the views of those who have complained of the present form, and would tend, if properly supported by owners, masters, and seamen, to raise the standard of discipline on merchant ships.

(28.) Should the Board of Trade decide to issue the new form, it will rest with owners and masters to make it a success by seeing that the characters given in all cases are such as the seamen deserve, and that, as time goes on, no seaman, save under urgent or exceptional circumstances, is engaged on board a British ship without one of these continuous certificates.

(29.) Our Chairman, Lord Dudley, has proceeded on military service to South Africa. We were therefore deprived of the advantage of his chairmanship at our last meeting to take evidence; but from the several discussions we have had under his direction, we have every reason to think that he concurs in the principle of our recommendations.

We have the honour to be,

SIR,

Your obedient Servants,

(Signed) WALTER J. HOWELL.  
ALFRED J. G. CHALMERS  
J. CLARK HALL.

# MINUTES OF EVIDENCE.

## FIRST DAY.

Tuesday, 9th May, 1899.

### PRESENT :

The Right Hon. The Earl of DUDLEY (*Chairman*).

Captain A. J. G. CHALMERS.

Mr. J. CLARK HALL.

Mr. W. J. HOWELL.

Mr. C. HIPWOOD, *Secretary*.

Mr. WALTER MURTON, C.B., Solicitor to the Board of Trade, called ; and Examined.

Mr. Walter  
Murton, C.B.

1. (*Chairman*.) In opening the consideration of this question, the Committee are anxious to obtain your advice upon the legal bearings of one or two points that I understand have arisen with regard to it. Would you mind explaining to us what these points are and what your views are upon them?—The main point, I understand, arises under section 129 of the Merchant Shipping Act, 1894, and the question is, whether the option of having a copy of the report of character or of endorsing it upon the discharge rests with the seamen or with the superintendent.

2. I will read the section. It provides that the master shall give to a discharged seaman "a certificate of his discharge in a form approved by the Board of Trade, specifying the period of his service and the time and place of his discharge, and if the master fails to do so he shall for each offence be liable to a fine not exceeding ten pounds"—That is section 128. Section 129 deals with a different subject matter, namely, the report on the seaman's character.

3. I had better read the 129th section: "Where a seaman is discharged before a superintendent, the master shall make and sign in a form approved by the Board of Trade a report of the conduct, character, and qualifications of the seaman discharged, or may state in the said form that he declines to give any opinion upon such particulars or upon any of them; and the superintendent before whom the discharge is made shall, if the seaman desires, give to him or endorse on his certificate of discharge a copy of such report (in this Act referred to as the report of character)"—The question upon this is, with whom rests the option of deciding whether the seaman shall receive a copy of the report or whether the report shall be endorsed upon the certificate of discharge.

3A. In fact, whether it is a matter for the seaman or the superintendent? We have here a copy of the certificate of discharge in use at present?—You will observe that there "ability" has been adopted as the word to describe qualifications.

3B. The Act says, "conduct, character, and qualifications," but if a man wants a statement by the ship master as to his character, where does he get it?—That is comprised in conduct. The desire for brevity has governed the whole procedure.

3C. It is quite conceivable that conduct and character may be different. Has the wording of the Act been precisely complied with in that certificate?—Not in terms.

4. (*Mr. Howell*.) The seaman really has no option at present. A space is left for his character, and the master is required under our present regulations to put the character there. The point which has arisen under Section 129 is whether that option does not rest with the seaman?—The question is somewhat doubtful, but my

view is that in strictness the option rests with the seaman. The superintendent is put in motion by the seaman's option. The whole action taken by the superintendent is taken only upon the expression of the seaman's desire, and the natural inference from the language used would seem to be that it is the seaman's desire that governs also the question of what he is to receive. The action of the superintendent appears to be simply ministerial.

5. (*Chairman*.) I cannot conceive how it could be otherwise. Can you give me a concrete case to the contrary? Would you mind pointing out how it can be argued that the superintendent has any option in the matter at all?—I took the Section and formed my own opinion upon it. I have stated that opinion. No doubt some arguments could be found to the contrary, but I don't see how these could prevail.

6. Do you think that Section 129 contemplated a separate form?—Certainly.

7-8. (*Mr. Howell*.) If the seaman desires it?—The two Sections are really quite distinct. The first of them, viz., 128, provides for a master in every case giving to a seaman a certificate of discharge. That document is not put upon record, and does not go to the Registrar-General of Seamen for preservation; but when you come to the next section, viz., 129, something quite different is contemplated and dealt with.

9. (*Chairman*.) What is the object first of all of the certificate of discharge?—To show that a man has been serving in a particular ship and where he was discharged.

10. It is a record of service?—Yes, pure and simple. The great distinction between these two documents is that the one remains in the custody of the seaman and no record is kept of it in the Registrar-General of Seamen's office, whereas the other, according to the second subsection of 129, has to be sent to the Registrar-General of Seamen to be recorded.

11. I understand that the object of a certificate of discharge is to enable a seaman to prove his service?—Yes. The report of character is contained in the official log, where there is a column for ability and general conduct.

12. To begin with, a certificate of discharge which merely carries out the enactment of Section 128 need not have upon it any of these round discs. They are really, I suppose, outside the view of Section 128?—Yes. If you want confirmation of that view of Section 128, I may suggest you should turn to Sections 260 and 261, which also obviously apply to all ships, to every case of a seaman being discharged from his ship in the United Kingdom, whereas you will find from the opening words of Section 129 that they provide only for the case of a seaman who is discharged before a superintendent; that is to say, the one applies to all cases, the other applies to a more limited class, where the seaman is discharged before the superintendent.

Mr. Walter  
Murton, C.B.

9 May 1899.

13. When is a seaman ever discharged before anybody other than a superintendent?—

(Captain Chalmers.) In the home trade and in coasting ships he may be discharged in the presence of the master.

14. And abroad?—

(Captain Chalmers.) Abroad before a consul.

15. Is the consul a superintendent?—The consul exercises special powers.

(Mr. Clark Hall.) The consul takes the place of a superintendent.

16. (Chairman.) Can a man ask for a report of his conduct under Section 129 when he is discharged before a consul?—That is provided for in another set of sections, namely 240 and subsequent sections. The master of every ship, except Scotch coasting ships, is required to keep an official log containing, among other things, a statement of the number and names of the crew, and the conduct, character, and qualifications of each of his crew, or a statement that he declines to give an opinion upon these particulars. In view of the requirements of the two different sections, the discharge and the report of character have been combined in one form for the sake of brevity and practical convenience; but the seaman can obtain the latter from the Registrar-General of Seamen as an extract from the official log.

17. Our Board of Trade forms, without the round spaces for character and ability, would satisfy the requirements of Section 128?—Yes.

18. Then we come to Section 129, by which a seaman discharged before a superintendent has the option of demanding a report of his character, conduct and qualification. Apparently by the wording of the section it is there contemplated that a different form should be given?—Yes, at the option of the seaman, or that it should be endorsed upon his certificate of discharge, which is in his own custody.

19. If he so demands, I suppose it is endorsed in these round spaces; but supposing the seaman asks for a separate report, how is it to be given to him?—Only as an extract from a different document, viz., the official log.

20. There is apparently no Board of Trade form for it?—That is the difficulty of the present arrangement.

21. In practice he must either take his record of character in these round spaces or leave it?—That is so at the present time. Upon the point whether a certificate of discharge is a separate thing, I may say that in the case of seamen left abroad on the termination of their service, the master is required by Section 186 to give to such seamen a certificate of discharge on the form approved by the Board of Trade; but nothing is said about character.

22. In the case of a seaman discharged abroad?—When his service terminates in any place out of Her Majesty's dominions.

23. Is the same form used in Continental ports?—

(Mr. Clark Hall.) It may not perhaps be strictly legal, but the consul there acts as superintendent, and puts the "G." or the "V. G." or cross or "Decline" upon the certificate.

24. If he follows out Section 129, and assumes the responsibilities and duties of a superintendent he goes further than section 186?—Yes.

25. Section 129 provides that where a seaman is discharged before a superintendent he shall have the option prescribed. And you have told us that the cases in which men are not discharged before a superintendent in the United Kingdom are in the coasting trade, where they may be discharged on board ship before the master. Would a man, therefore, if discharged before the master, have a right to demand a report on his conduct and character?—Apparently not.

26-27. Your opinion is that under Section 129 the option rests with the seaman alone?—Yes.

28. The superintendent is merely put in motion by the seaman?—Yes; and his action is governed by the wishes of the seaman.

29. What is the next point?—The next point is this. Assume that a system of continuous discharge and record of character is adopted, and the seaman applies for extracts from it—not for a complete copy—may you give him exactly what he asks for, which is a selection of the agreements on which he had a good character, and the suppression of cases where he had a bad character, or can you compel him to take the whole document, and

make him pay for it. I think there can be no question that he is entitled to have exactly what he asks for, and to pay for what he asks. You cannot compel him to take any more. The word extract is quite explicit; but the Registrar-General of Seamen or Board of Trade in giving the copy of what is required would probably take care that something on the face of the document would show that it was merely an extract from a particular part of the man's service, and not a record of the whole of it. It would be quite easy to do that, so as to put any master to whom the seaman applied for an engagement upon inquiry where the man was within certain dates, and where his report of character for these periods was. That point is covered by Section 695.

30. I don't quite follow you. Section 695 deals, does it not, with documents being admissible in evidence? Does not that mean that these documents held by the Registrar concerning ships and seamen shall, if wanted in a court, be produced when so required?—You will find the clause provides that the officer shall furnish a certified copy of such documents to any person applying at a reasonable time for the same without qualification as to the purpose for which the document is wanted.

31. When you talk of documents being admissible in evidence, does not that mean in Court?—No doubt that is its primary meaning. But documents which any person is allowed to apply for a copy of, and which an officer is required in such unqualified terms to furnish, cannot be limited to that particular purpose.

32. Does Section 694 govern 695?—In Section 256 you will find another instance of the phrase "admissible in evidence" being used.

33. (Mr. Howell.) When a document is admissible in evidence a seaman has a right to apply for a copy of it?—That is so. And that applies to the case of the official log, which is a document declared to be admissible in evidence. It contains the character report, and the seaman has a right to ask for a copy of it.

34. (Chairman.) I don't quite understand why it is necessary to enact specifically that these documents should be admissible in evidence. I thought a Court had always the right to call for any document?—Yes. The question of admissibility always arises in a court of law when a document is put in, but that question is precluded in this instance by the provision attached to this enactment that these documents shall be admissible. There is often a long discussion in courts as to whether documents are or are not admissible in evidence.

35. So in order to avoid such discussion all these papers which the Registrar keeps are admissible in evidence?—That is a little qualified by the statement that all superintendents or officers of customs shall take charge of all documents which are delivered or transmitted to or retained by them in pursuance of this Act. That may not mean every document, but only documents delivered to such officers in the course of their duty, or so obtained by them. Of course, that is a wide description in itself.

36. Does this make any change in the general order of things? Is not every paper that is admissible in evidence and that is kept by a public department viewable by anybody upon payment of a fee?—I cannot answer that question without qualification.

37. At any rate, under this Act it is so, so far as these documents are concerned?—Yes.

38. Any seaman can go and demand extracts from any document admissible in evidence?—Yes.

39-40. Can he demand an extract without the context? The log contains a list of the crew and reports of character in two columns as to ability and general conduct; but a seaman's ability might be good whilst his general conduct might be infamous. Could he go to the registrar, and on payment of a fee obtain from him an extract from the log book, which says his ability is good without any accompanying record of the fact that his general conduct is very bad?—The Act provides for an extract, and I think the man may get what extract he likes; but I suppose the Registrar General of Seamen would take care that it was clearly shown to be merely an extract.

41-42. Is this the answer, then—that, although a man can do that, still if he tries to use such an extract to obtain employment afterwards, the omissions would be so obvious that the document might be rather a hindrance than a help to him?—That is so, and, as I said before, in a case of that kind the Registrar General of Seamen would probably take care that some warning words were inserted. My answers, I should say, depend upon the form

of the certificate of discharge. It has always to be remembered that a discharge as such is simply a record of service, and has nothing to do with qualifications or character. This Committee is, I believe, sitting on the question of continuous discharges, but it must not be forgotten that the certificate of discharge does not, so far as the existing Act is concerned, contain any record of character at all. It is a document of which the sailor has the custody, and no record of it is kept by the Registrar General of Seamen. Whether you adhere to the present form, or so alter it as to make it a continuous discharge, the Registrar General of Seamen has nothing to do with it as the Act at present stands.

43. Although the Registrar General of Seamen might be able to obtain information from the log, I assume that would involve considerable labour. Suppose that we wish to put in force some form of continuous discharge, would it not, in order to carry that out, be necessary that we should change the practice at present in force, not only in the United Kingdom, but abroad as well? I mean, would the whole practice of discharging seamen before consuls abroad and superintendents in England, or before masters on board ship, have to be all altered?—That would all depend on the form the Board of Trade prescribe.

44. Would a change of that sort be in the power of the

Board of Trade by purely administrative methods?—Yes, so far as it concerns the form.

45. But if we were to enforce the inclusion in the certificates of discharge of records of ability and character as well, would that require legislation?—The two have hitherto been combined.

46. But I am supposing that we wanted to have a form of continuous discharge bearing upon it the record of ability and conduct compulsorily added, and which would no longer be simply within the option of the seamen to obtain, would that require legislation?—Yes.

47. We should practically, then, be amalgamating sections 128 and 129, and eliminating that part of 129 which leaves the seaman an option?—That would clearly require legislation.

48. (*Mr. Howell.*) I think the third point is scarcely worth mentioning?—I understand it is whether you could apply the system of continuous discharge to deck hands only or to all seamen in the foreign trade, and upon that point, as long as you comply with section 128 in regard to discharges, you can do as you like.

49. If we wanted to limit it to deck hands, we might have a form for them and another form for the other people?—Yes. But the inconvenience of it is another question.

Mr. EVERARD HOME COLEMAN was called ; and Examined.

Mr. Everard  
Home  
Coleman.

50. (*Chairman.*) You are kind enough to come to give the Committee the benefit of your experience at the office of the Registrar-General of Seamen, where I understand you used to be employed?—I was there from the commencement of the system or within a very short period after the commencement ; in fact, as soon as the Act was passed and we got into working order.

51. And prior to that you were at the Admiralty?—Yes, I was there for eighteen months or two years.

52. So that you have had a prolonged experience of shipping questions in both branches?—Yes, it extends from the day after the House of Commons was burnt down in 1834 ; it was then I went to the Admiralty.

53. Whilst you were at the office of the Registrar there was an attempt made, I think, to establish what was called a register ticket with regard to the discharge of seamen?—There were discharges before the introduction of the ticket. Prior to the passing of the Act of 1835, in the reign of King William IV., the issue of a discharge was optional ; some masters gave them occasionally, and the seamen might look for them occasionally, but there was no compulsion on either side. They were freely given and freely disposed of, and men did not place value upon them.

54. It was in those days entirely in the master's option whether he granted any certificate of discharge at all?—Yes, they were not provided for under any Act of Parliament.

55. Before proceeding to tell us more about the register ticket, perhaps you would like to read to us your own notes giving a resumé of your experience in connection with these matters?—Yes. I have stated that prior to the passing of the Act of 1835 the issue of a discharge was optional. Few were issued and few were demanded.

56. What was that Act?—It was the 5th and 6th William IV., Cap. 19, passed in August, 1835. By that Act, Section 13, seamen were entitled to receive from the master a certificate of discharge specifying their period of service and time and place of discharge, but no account of character or conduct was given or required. There was a penalty of £5 to be paid to the seamen.

57. (*Mr. Howell.*) I suppose that was a penalty if the master did not give the seaman a certificate on application?—Yes. The master was compelled to give one under a penalty of £5, but there was no reference in it to character or conduct. The discharges and other documents required under the Act were then and for many years printed both in London and the provinces in various styles, sizes, and forms, according to the fancy of the printers. They could be purchased from ship chandlers, Jew sloop sellers, stationers, publicans, or other people.

58. And from crimps?—Yes, they were under no restrictions whatever. The consequence was that the discharges were forged and trafficked in. In fact they were valueless, and I have no doubt that quite 20 per cent.

of those afloat were concocted and manufactured by those who were interested in getting rid of a seaman as soon as he was in their debt. Blank certificates of discharge were in great demand and were frequently forged or transferred, more so than the other forms because of the uses to which they could be put. The other forms were required for official services, and therefore were not so extensively misappropriated as the discharges were. We next come to the 7th and 8th Victoria, Cap. 12, passed in September, 1844, which came into force on the 1st of January, 1845. Section 13 of that Act directed certificates of discharge to be given in the form prescribed in Schedule E, under a penalty of £5, to be paid to the seamen, but there was no reference to character and no penalty for improper use. This was the first Act in which the "form" of discharge was directed. I might here mention one case to show the necessity of the alteration. There was a voluntary examination of masters and mates which came into operation under an Order in Council of August, 1845. It was optional with them whether they would undergo that examination or not. At that time I had very much more to do with the seamen than anybody in the office, and it came to my knowledge that many of the proofs of so-called sea service presented at the Trinity House, where the examination took place, were forgeries. The Registrar wrote to the Secretary at the Trinity House, Mr. Herbert, and suggested that we should scrutinise these so-called proofs whilst the examination was proceeding. We had not been long at this work before some papers were sent in as proof of sea service. It was discovered that while the seaman was supposed to have been at sea he was really at work in a builder's yard in the Commercial Road. We had some constables then attached to the office, and the man was taken into custody, and taken to Thames Police Court, where he was charged with using a forged certificate. When he was committed to the Old Bailey, there was a process called a bill of indictment, and it was discovered that the certificate granted by the Trinity House was itself in no way protected by any Act of Parliament, and there was no penalty for improperly using a discharge. The result was that the man was indicted simply for attempting to defraud the Trinity House of a piece of paper valued at 6d., but the judge inflicted a sentence of six months' imprisonment. Had there been any protection afforded by the Act this roundabout way of reaching the offence would never have been necessary. Singularly enough, the man in question was the son of a Trinity House pilot. I now come to the register ticket, which came into force on 1st January, 1845. It was supposed that the ticket would prevent desertion, but circumstances were against it. The ticket was in existence for some years, and during that time the discharges were in great demand. During that period the discharges bore for the first time some record of ability and character.

59. (*Mr. Howell.*) By discharges, do you mean the register ticket?—No, I am speaking of the discharge certificate.

Mr. Everard  
Home  
Coleman.  
9 May 1899.

60. (Chairman.) Can you explain what the register ticket was?—It was supposed to prevent desertion.

60\*. Was that the nature and object of the registered ticket?

(Mr. Clark Hall.) Its object was to enable the man to be identified. There was then an idea of balloting for the Royal Navy, and these tickets would be put into the ballot and the numbers drawn out for service.

61. Was that in 1844?—

(Mr. Clark Hall.) It was in 1845.

When was this ticket given to the man?

(Mr. Clark Hall.) When he first went to sea.

62. (Chairman.) When a sailor went to sea had he to carry one of those tickets with him?—It was in the custody of the master during the voyage.

63. Did that rule apply to everybody on board ship, stewards, cooks, and everybody, as well as seamen?—Yes, to everybody, except passengers.

64. And the master took charge of the tickets?—Yes. On the return of the vessel if the man was with it, the ticket was given to him with his discharge. If in the interim he had deserted or died, the tickets were returned to the Registrar of Seamen.

64\*. I suppose the Registrar kept them and returned the ticket to the man if the man turned up and applied for it?—Yes. If the man turned up he was liable to a penalty for loss of the ticket.

65. What was done if anything happened to the master, and all the tickets were lost, as in the case of a wreck?—In that case the men would be supplied with new tickets without any fine.

66. But if the master lost the tickets?—That very seldom happened. It was more frequently the seamen who lost them.

67. Do you mean after a voyage?—The seaman did not have them in his possession during the voyage, but, at the termination of the voyage, if he had not a ticket, he had to account for the loss of it under a penalty. For some few years we inflicted that penalty ourselves, but the idea was suggested that that was illegal, and that fines and penalties should only be inflicted before a magistrate. It fell to my lot to summon men before the Lord Mayor for the loss of their register tickets. During the seven years that that system was in force 4,107 men were taken before the Lord Mayor for losing their tickets by desertion. The full penalty of 10s. was usually imposed. At that time we did what we could to check desertion. Whenever the shipowners resided in London, a circular letter was sent, informing them that on a certain day the deserter would be before the Lord Mayor if they thought proper to prosecute for desertion, which was then punishable by one month's imprisonment. I find that during the period already mentioned there were 219 convictions for desertion in London alone.

68. Discharges were given to the seamen compulsorily at the end of a voyage under the Act of 1845?—Yes, if they completed the voyage. Seamen were bound to get some sort of discharge. That was brought into force by the Act of 1844.

69. Did that Act establish those register tickets?—Yes.

69\*. (Chairman.) The register tickets were only framed with the idea, as I understand, of identifying the man in case he should be called upon for service in the Navy?

(Mr. Clark Hall.) That was only one of the reasons or it.

70. I gather from Mr. Coleman's evidence that desertion was at that time the great evil, but how did the register ticket check desertion?—By the seaman having to account for his ticket and by the penalty attached to its loss. If he duly performed his engagement the ticket was given to him. If he did not, he was compelled to appear without it, and to account for it.

71. If he deserted, he naturally left his register ticket in the master's possession, and I suppose if he tried to get another ship, the first thing he would be asked before signing on would be, "Where is your register ticket?"—They never did attempt to sign on without one, for they knew they would not be accepted.

72. Did that system succeed?—It did not succeed.

73. Why not?—Because we had to trust a great deal to the truth and honesty of the seaman. When a man applied who had lost his ticket, he might pretend that he was going to sea for the first time.

74. I understood you to say there were many convictions for desertion?—Yes, there were 219 during the period I have mentioned.

75. That was after the register ticket was started?—Yes. Some of the shipowners made a point of prosecuting for desertion, but others were indifferent, and in some cases we were not in possession of sufficient evidence to secure a conviction, so that out of 4,107 cases of men who had lost their register tickets, there were 219 convictions for desertion.

76. (Mr. Howell.) Were they sent to prison?—Yes, the punishment was one month's imprisonment for desertion.

77. (Chairman.) Did seamen in those days sign articles in the same way as they do now?—Yes. At first a man was simply asked his name and the name of his last ship, but as they got educated to the new system the certificates of discharge were produced on all occasions. In January, 1846, an Act was passed, called the Merchant Seamen's Protection Act, 8 & 9 Victoria, cap. 116. Up to that time the hands that were required by shipowners were obtained from the Jew sloop sellers, publicans, and crimps in general, but under that Act the Board of Trade was empowered to issue licenses to certain persons to engage seamen for merchant ships. As these licences were only granted for twelve months at a time, the persons who held them were somewhat under control, and we made it a point that they should, as far as possible, make sure of the genuineness of the discharges that were presented. This took the shipping of seamen to some extent out of the hands of crimps, who, of course, were much opposed to the change. During the time that Act was in force I obtained forty-four convictions for evasions of the Act, either because the offenders charged the seamen for shipping them, or because persons engaged seamen without being licensed to do so. That in a great measure was a protection to the seamen, and to the good men particularly, because they had their discharges, and used them to their own advantage. It so happened that some even of the shipowners opposed the new system. Good sailors would not go to the sloop sellers, but an indifferent man without a rag on his back or a shoe to his foot was only too glad to go to them, for the sake of his outfit, and the publican or sloop seller was only too glad to take him in because he got two months' advance wages out of him. The shipowners of the lower class certainly encouraged these crimps, because they got the men cheaper than they could through the licensed agents. That Act was in force until 1851. The London seamen were, I think, better than those elsewhere, inasmuch as they were so strictly looked after. I have known some go down to Gravesend and Rochester rather than apply in London, so as to evade the possibility of owners taking proceedings against them. From August, 1835, until the passing of the Act 13th and 14th Vict., cap. 93, passed in August, 1850, the office was under the control of the Admiralty. By Section 16 it was transferred to the Board of Trade, and Section 30 enacted that forms bearing the Board's seal should be received in evidence in any court of law. Certain tradesmen were then licensed to deal in these forms, and that in a measure tended to prevent the improper use of certificated discharges, which then could only be obtained in books. That stopped a great many of the forgeries which had previously taken place. The only material alteration from that time to this has been in the mode of endorsing or stamping the character and conduct. The certificate of the period of service remains the same now as it was in the year 1850.

78. Was not some attempt made between 1857 and 1863 to establish a form of continuous discharge?—Yes; but I can go much further back than that. There is a discharge paper before you which was brought out at Liverpool in connection with the Sailors' Home. Between the years 1846 and 1849 the superintendent there adopted a form for which there was no provision in any Act of Parliament. It was a form of continuous discharge provided on his own account. There was no difficulty with the first entry, but if the seaman returned to another port or did not return to Liverpool the superintendent would refuse to recognise the document or would repudiate it, as it was not issued under any Act of Parliament. Therefore there was a difficulty in continuing the discharge from ship to ship, and the same difficulty would be created now were a man in possession of his discharge during the voyage, because he might not produce it at the termination of the voyage; he might have left it at his home, which might be in the north of England.

79. The failure of the attempt you have mentioned was due to the fact that it was merely the benevolent attempt of an individual superintendent at Liverpool?—Yes.

80. And having no legislative sanction, other superintendents would not co-operate to carry it out?—Quite so.

81. In fact, the Liverpool man tried to do a thing that he had no power to carry out?—Yes.

82. Is that the only attempt?—Until you come to the year 1857.

83. What happened in that year?—The Board issued the form marked E2, of which you have a copy before you. That copy happens to be a favourable specimen, as the man to whom it refers returned each voyage to the same port and to his home. He would have no difficulty in presenting the document to have the necessary entry made, but the man might have left the document at home, or for some other reason he might not have been able to produce it, and there was no compulsion.

84. (Mr. Howell.) But this was a form approved by the Board of Trade?—Yes.

85. (Chairman.) What happened when the man did not produce it?—He took a fresh paper, and his service was no longer continuous. One advantage of the register ticket system was that the master must demand it at the commencement of the voyage, and return it to the man at the end of the voyage if the seaman returned in the ship; if the seaman was discharged abroad, the consul was bound to make the entry. If the seaman deserted, the certificate had to be returned to the Registrar, so that when the ship came back only one of the voyages—the outward—is entered upon it.

86. (Mr. Clark Hall.) Can you tell the Committee why that continuous discharge E 2 failed?—It imposed much additional work upon the superintendents at the out ports without any corresponding increase of staff, and therefore they did not encourage it.

87. (Chairman.) Why did it increase the labour of the superintendents?—At the present time, if a crew of thirty or forty men has to be discharged the broker's clerk goes to the shipping office in the morning, gets a supply of blank certificates, and fills them up with the required particulars, so that when the captain arrives he merely has to affix his signature to it, and the transaction is complete. But in one of these old documents all that had to be done separately whilst the master was paying his men their wages.

88. All the master would have to do would be to add one line of particulars to the form already filled up?—But that means a good deal if it is multiplied in thirty or forty cases.

89. Did the men themselves keep these certificates after 1857?—Yes.

90. What other extra labour did the superintendents have through this system?—They had to transmit a copy of the discharge to the Registrar for the purpose of being entered at the office, and then there was the question of fees and the cases to be accounted for.

Mr. G. A. HOOKE, called; and Examined.

103. (Chairman.) You are at present, I think, in the office of the Registrar-General of Seamen?—Yes.

104. And you have been good enough to come to tell us your views about the question of establishing continuous discharges. I suppose that your duties have brought you a good deal into relationship with seamen's discharges?—Yes, we make extracts from the official log-books to take the place of lost discharges. The seamen come to us for copies, which are really certificated extracts from the log-books.

105. They pay a fee for that?—Yes, a small fee—of nominal amount.

106. Do you find that they come to ask for portions of what the log tells, or do they ask for the whole of it?—Very seldom for the whole of it; usually for the record of one voyage. They sometimes want a recent voyage, and then, perhaps, one for three or four years previous, not only to show that they have recently been at sea, but that they have taken different voyages. They do not wish to produce proof of intermediate periods.

107. Do you think that is done for the purpose of trying at all to hide their real character?—Not necessarily.

108. (Mr. Clark Hall.) If a man has a bad discharge, does he ask you for an extract from that, too?—He occasionally comes and asks for an extract, and when he finds that we have to give him one which declines to report on character, he says, "That is no good, I will take another one." He does not take it away, although he

91. Did the seamen like these certificates?—I think the answer would be that they did not apply for them. They did apply at first, but after a time the issue greatly dropped off. I believe the best thing ever instituted was that book cover which the men have had of late years. Sailors cannot take good care of loose papers from the nature of their avocation.

92. (Captain Chalmers.) They can destroy those they don't like?—Yes; and unless we compel them to take a continuous discharge they can do so now. So long as a man has a good character, he will produce it; but when he has a bad character he professes to know nothing about the document.

93. (Mr. Howell.) Was it not another reason for their failure that the documents got so dirty and worn through the men carrying them?—That might be so to some extent, but they were supplied in a tin case, for which a shilling was charged in the first instance. I think the great difficulty was the production of the documents on the second occasion, more particularly when the vessel did not return to the port from which she started. If a man placed any value upon the document he often left it at home in charge of his family, and the man must have thought it worth something if he paid a shilling in the first instance.

94. He paid a shilling to get it?—Yes, to get it in a tin case.

95. (Captain Chalmers.) Was it in 1851 that a record of character was first introduced into the certificate of discharge?—Yes, it was optional then, as it is now.

96. At that time, did the captain give a copy of the report of character in the official log?—Yes.

97. Can you tell me under what Act that first arose?—In the Act of 1850.

98. That Act first called for the entry of character in the official log?—Yes.

99. Then it was optional for the character to appear in the certificate of discharge?—Yes; he might decline to give it.

100. Who might decline?—The master.

101. Had the seamen the option to decline to accept any character?—There were discs at the back for the letters G, meaning good, or for bad, or for "declined."

102. Originally, when the character was first introduced upon the certificate of discharge, was it upon a perforated sheet?—Yes, and it was endorsed on the back. The discs were inserted afterwards. Discharge certificates have gone through various forms, but these changes have referred principally to the mode of marking the conduct and ability. I may simply add that there was an Act passed in the reign of George III. for the prevention of desertion; but it applied wholly and solely to the West Indies.

may pay for it. If they ask for extracts on separate papers we give them in that form.

109. (Chairman.) Does he have to pay a fee for an extract from every log?—Yes; 4d. for each voyage.

110. What are your views about the question of continuous discharges?—I am in favour of the continuous discharge if it can be made practicable, and if it showed the report of the conduct and character of the men it would be useful to the owners. A great deal has been done for the seamen in making the owners expose what the voyage is to be, and the character of their ship, and what the load line is going to be.

111. As a matter of fact, do the seamen really look at that?—I do not think many of them do; but great pains are taken to explain the agreements to the seamen before they sign them.

112. I suppose there are very few cases of men refusing to ship because the vessel is going to one country rather than to another, or because of the load line?—It was because they were so indifferent that the load line had to be made compulsory.

113. Is it true to say that to all intents and purposes the form of reading the agreement which is gone through is almost unnecessary?—To a great extent.

114. Is it very seldom a deterrent?—The seamen do exercise their choice occasionally, but very seldom; still much is done in the interests of the seamen.

Mr. G. A. HOOKE.

Mr. Everard  
Home  
Coleman.  
9 May 1899.

Mr. G. A.  
Hooke.

9 May 1890.

115. Do you think that that same principle might be followed in case of discharges?—I have thought that continuous discharges might be issued in the interests of owners, so that they might know before engaging a seaman what kind of man they are entering into a contract with. It would assist the masters in maintaining discipline.

116. I suppose you think that, by way of help to the shipowners, it would be essential that a form of continuous discharge should bear upon it a record of the man's conduct and character?—I think that is most important. I do not think it would be of much value without that. The real value would attach to the document bearing testimony to character.

117. You think that the shipowner would not regard it as of any use to him, merely to have a record of service put before him without any record of character or conduct?—It would be of very slight use. I should say the certificates would be of very little assistance to the seaman in getting employment if it had no report of his conduct. There might be exceptional cases occasionally where there is no report in the log-book of the conduct of any of the crew, and in such cases a certificate of service might be of some value to the seaman.

118. Do you think that a report of conduct is now of very much use; does anybody pay much attention to it?—I think some attention is paid to it. I believe a V.G. character is often given much as a matter of form; but if men are not engaged on testimonials of character, what have you to rely upon?

119. That is quite true, but what if you know the testimonial is worth nothing?—We know that some percentage of the men get only "G.," or the words "decline to report," if their character is bad.

120. What sort of proportion?—Perhaps one or two per cent.

121. Can you trace in the official log the decline of a seaman; can you trace, I mean, that, whereas he may get V.G., in the first discharges, he only gets G. in later discharges?—We have no complete record of seamen's careers.

122. But I suppose that in going through logs you notice the careers of different seamen, or are there too many to follow them up?—Yes, too many. The only way we should notice would be if a man comes to ask us for his record, giving us a rough outline, and we look it up for him.

123. It is obvious that a man would not ask for that if his past record was a very bad one?—It is generally the best men who want a complete statement of all their service.

124. Is it possible to trace the effects of the "G." discharge or the "decline" discharge; what I want to ascertain is if a master declines to give a character at all, or gives a "G." discharge, has it any effect on the possibility of the seaman getting employment afterwards?—I think you will arrive at that from the fact that it is the common practice for all masters before engaging seamen to ask to be shown their discharges. If a man has only a "decline" report he would be rather ashamed to show it, or a master would tell him it was useless. But if a man could by begging or borrowing or stealing, get a good certificate, or by getting an extract referring to a voyage when he had a good character, he would produce that.

125. If seamen have a bad discharge certificate do they come to you to get a copy of a previous one which bears a better character, and ignore altogether their intermediate voyages, trying to get employment on the faith of discharges given them some years previously?—Yes, that may be done.

126. Making out that they have not been to sea since?—They might say so, or that they had lost the intermediate discharges.

127. Is that the weakness of those books which contain discharges on practically continuous discharge forms?—They are added to time after time by the seamen. If a man gets a bad report he can take it off, and there are no means of knowing whether a discharge note has been taken out.

128. Can you tell us anything about the history of these things? Do you know how many attempts have been made in the past to establish forms of continuous discharge?—Only two by the Board of Trade. There was a voluntary attempt by a Sailors' Home at Liverpool, but that was very short-lived, and I do not know much about it.

129. Which are the Board of Trade attempts?—The E2 in 1857 and Dis 10 in 1885; but there was also a ticket which was not exactly a certificate of discharge, although it had some characteristics very similar to what a compulsory certificate would have. It identified the seaman, and would have to be produced on his engagement.

130. Will you please tell us about the register ticket?—That was introduced under the Act of 1844.

131. (Mr. Clark Hall.) 1835 was the original date of the Board of Trade discharges?—The earliest record is in 1729, when a seaman forfeited a month's pay if he left his ship before receiving a discharge in writing. In 1796 there was an Act passed applying only to vessels going to the West Indies. It provided that shipmasters should on demand give to seamen in certain cases a certificate of discharge, under penalty for refusal. That did not apply at all to the mercantile marine at large.

132. (Chairman.) What happened in 1835?—In that year every seaman became entitled to have a certificate when he left his vessel.

133. If he wanted it?—I think it was compulsory that every seaman should have it. It was not provided that more than the period of service should be put in it. Nothing was said in it about character. Nine years later a reform was introduced, and the schedule of the Act gave the actual form to be used. It was not until 1850 that character was introduced; but a record of character is not of much use unless it can be reported upon before some official. In 1850, when the shipping offices were opened, it was provided that where a seaman was discharged before a shipping master he should have a report on his character if he wished it.

134. I think that has been embodied in the Merchant Shipping Act?—Yes, that is practically the same thing. While these things were going on the register ticket was also in use. The single certificates were always in use from 1835, but in 1844 there was the register ticket in addition. I don't know how that fell through, but circumstances generally were unfavourable. There was a large number of desertions, and the temptation to seamen to desert was considerable. A large number of vessels were being built in Canada—at Quebec—and extremely high wages had to be paid to get seamen to take these vessels away. Something like £8 per month was offered instead of the usual £2 per month, so men would desert at Quebec to get these higher wages. I suppose that in hundreds they forfeited their register tickets which were held by the masters. When the seamen returned they had to come to the Registrar-General's office and ask for copies. These desertions upset arrangements to some extent, but in 1850—at the time of the establishment of the Mercantile Marine Offices—there was a sailors' strike. I suppose the seamen discussed not only the attempt to reduce their wages, but they collected together and complained of everything in the new code, including the register ticket. Their leaders, the agitators, collected the tickets from them in order to continue the strike and prevent the sailors from going to sea, for the men could not go to sea without the original tickets, or copies, or renewals. I am not familiar with what was done after the men's leaders got the tickets, but that practically broke the back of the register ticket system, and they were formally abolished in October, 1853.

135. What do you say was the object of the register ticket?—To identify the man and to enable him to be called out for service in the Navy if required.

136. We were told by another witness that one of the reasons why the register ticket failed was that so many men used to desert and forfeit them, and then appear before the Registrar-General for a new ticket upon a false representation that they were going to sea for the first time?—They might do so.

137. When was the continuous form of discharge, which we know as E2, established?—In 1857, four years after the register ticket was abolished.

138. What was the form in the schedule of the Act of 1844?—That was a single certificate only. The continuous certificate has never been in the code.

139. Was the continuous form established for the first time in 1857?—Yes.

140. It was then for the first time sanctioned by the Board of Trade?—Yes, but it was not compulsory in any way.

141. (Mr. Howell.) There were other forms approved by the Board?—Yes, for single certificates. It was at the option of the seaman to take either the single or the continuous form.

142. (*Chairman.*) Let me see whether I have now mastered the history of this business. In 1729 discharges were used, but were not required by statute. In 1796 you had an optional discharge relating only to ships trading between England and the West Indies?—Yes.

143. In 1835 you have that principle extended compulsorily to the whole of the mercantile marine?—Yes, but it was hardly optional in 1796. The form was optional, but the seaman was entitled to demand a certificate of discharge.

144. Was the master compelled to give it if the seaman did not want it?—No, it was optional to that extent.

145. It was optional in the same way that the record of character is now optional. In 1835 you have it made compulsory and applied to the whole mercantile marine. Every master had then to give a certificate of discharge to every seaman all through the mercantile marine?—Yes.

146. But no form was approved?—Quite so.

147. Then in 1844 you have an approved form fixed by Act of Parliament?—Yes.

148. Was there no other change till 1857?—In 1850.

149. Oh, in that year the statutory form was dispensed with, and it was left to the Board of Trade to fix a form?—Yes. (*Form produced.*) So far as the home trade is concerned it is practically the same form. The Act of 1854 would be merely a Consolidation Act, and would make no alteration in the form. The certificate of service for the foreign trade was upon one-half and the certificate of character on the other half, so that either could be detached.

150. Have you ever read any of the Parliamentary debates which led to that form of discharge being approved in 1850?—No, nor have I seen any of the Board of Trade minutes relating to that.

151. Can you tell us why the report on character or ability and the certificate of discharge were kept separate?—That is almost a natural outcome from the terms of the Act of Parliament. It says that the seaman may have the record of character or not as he pleases. The Board of Trade had to make provision for the alternative. The seaman could have a report on his character if he wished it. The points with regard to the single discharge are the attempts made to modify the particular way of showing the character. First we had two separate discharge notes, and then a little later the record was printed on the back of the certificate in discs, so that it should not be tampered with. That was introduced in 1869. Then there were six discs. If a man received a "G" character it would be put into the appropriate disc, so that he could not fraudulently improve it by prefixing the letter "V." The fact of a record being on a "G" disc would show that it should not contain the letters "V.G." But for some reason that was abandoned. I don't know why. It seemed to be a very complete check. Perhaps it was given up because the masters did not care to take the trouble of turning it over.

152. Do they now add the letter V to these certificates?—If they attempt anything of that kind they usually do it rather clumsily.

153. (*Mr. Howell.*) If a master were simply going to give a G character he would probably put it near the middle of the disc, and anybody attempting to add a V before it would probably be detected?—He might cover the whole disc with the G. The next change was to abandon putting the character on the back, and putting it instead on the corner of the certificate so that it might be cut off.

154. Can you tell us why the plan of putting the character record on the back was abandoned?—No.

155. Do you know when it was abandoned?—At a few ports in 1883 and entirely in 1889.

156. Then it was in force for some time?—Oh, yes.

157. How long did the new ones continue in force?—For six years.

158. Why were they abandoned?—There was a doubt raised as to the legality of cutting off the corners.

159. Did the superintendent cut it away?—Yes, I think it was the superintendent who had to cut it off if the seamen desired it.

160. (*Chairman.*) That was doing the absolute reverse of what the Act prescribes. It says the seaman shall be given a report of his character when he requires it, but the Board of Trade plan apparently was that he shall always be given a report of his character whenever he

leaves the ship, but that when he does not desire to have it the superintendent shall cut it off?—Yes.

161. That had a very short run?—Yes, within twelve months the instruction to the superintendent to cut off any part of the certificate was withdrawn.

162. That change was not made owing to any pressure from outside?—No, I think not.

163. When was the present certificate introduced?—I believe it was in 1890.

164. The form we have got now is the same form that was used at the time when the superintendent was instructed to cut a portion off, the only alteration being that that instruction to superintendents was withdrawn?—Yes, the difference is that the character is entered now in discs at the foot instead of in spaces at the corners.

165. I think now we understand the history of this matter so far as the single discharge is concerned. Now about the continuous one?—The continuous certificate of discharge was first used by the Board of Trade in 1857, and it was called E.2. That was offered to the seamen to take it if they pleased. I suppose some ten or twelve thousand were taken up in the first two years, viz., 1857 and 1858.

166. This was in addition to the single discharge?—Yes, so that when a seaman got his discharge he could either pay a shilling for the continuous discharge form E. 2, or he could have a single discharge.

167. (*Mr. Howell.*) I think the charge of 1s. covered the cost of a case for it?—Yes, I think so.

168. (*Chairman.*) Was the E. 1 certificate in force at the time when E. 2 was being used?—Yes, they were running concurrently.

169. Why did this fail?—I suppose it was not much pressed by the superintendent, and it gave them additional trouble. After it had been running six or seven years the Board of Trade issued a circular telling the superintendent to press it, but about six months after, before there was the slightest chance of that circular having much effect, the Board of Trade withdrew it altogether.

170. Was it running six or seven years?—I think eight years. The seaman liked it at first because in beginning a continuous discharge form a man is likely to anticipate for himself a good record, but he is liable afterwards to have a bad character sometimes, and then he would rather have a separate discharge.

171. (*Mr. Howell.*) Perhaps the fact that the man had to pay a shilling each for these continuous discharges had a certain effect in leading the seamen not to take them up?—I don't think that made much difference, because if a seaman on his discharge had a good balance of wages he would not think much about the shilling.

172. (*Chairman.*) Did not the masters or shipowners give a preference to those seamen who had such continuous discharge notes?—I have no experience upon that point, but there were so comparatively few used that I don't think masters would have much opportunity of giving the holders a preference, but probably they would take one of the men having such certificates if available.

173. After the E. 2 form was any other form tried?—That lasted until the beginning of 1885, when the book form was introduced. I don't think that was sent to every port, but only to the principal ports.

174. And they were not taken up at all?—No, only a very few were used. It contained no report of character.

175. So that a seaman wanted a single discharge as well?—Yes, if he wanted a report on his character.

176. (*Mr. Howell.*) If seamen adopted the continuous form of discharge certificate, was there no means of getting a character?—I think not. No other form was provided.

177. (*Captain Chalmers.*) Could the seaman not ask the superintendent to endorse on the continuous discharge the character he bore from the log book?—I suppose he could.

178. (*Chairman.*) But that would only apply where he was discharged before a superintendent. When was the E. 2 withdrawn?—In 1863. I might mention that in 1882 cases were issued by the Board of Trade, and that they were taken up in very large numbers.

179. (*Mr. Howell.*) I think sixpence was charged?—I have ascertained from the storekeeper that he has distributed something like sixty thousand of these covers.

Mr. G. A.  
Hooker.

May 1899.

Mr. G. A.  
Hooke.

9 May 1899.

and the bulk of them passed into the hands of the seamen.

180. (*Chairman.*) But only a very few of the continuous discharge forms were taken up?—Yes.

181. Although the only difference between the two is that in the book form you can lose one of the discharges without any record that it is away, whilst in the other its absence can be at once detected?—I don't know that it would be immediately detected. The master would have to look closely into the numbering of the pages.

182. Tearing out one would disturb the numbering of the pages?—Yes.

183. Perhaps you will now tell us your own views upon this matter? Do you think that a form of continuous discharge could be made compulsory?—There are two kinds of compulsion that could be introduced. Either to compel a seaman to take the form at the end of his voyage or to require him to produce it at the beginning of his voyage. There would be no difficulty under the present state of the law in requiring him to take it at the end of the voyage, and you might thus get a large number into actual use. All the better seamen would naturally get their next employment by showing their continuous certificate of discharge, and it would be available for the next entry to be made upon it.

184. I do not quite follow you about the two kinds of compulsion?—If a seaman is not required to produce the same certificate at the beginning of his voyage he might have to get another, and so he might accumulate a number of continuous discharge certificates showing one voyage on each sheet. The practice now is that seamen do produce their books to the master at the time of their engagement, and in the majority of cases they would do so, but the bad class of men whom it is desired to reach by means of continuous certificates could evade the provision by losing their continuous certificates. They would obtain some kind of statement of service just sufficient to enable them to get employment, and then they would have to receive another book at the end of that voyage. The compulsory production of the certificate at the end of the voyage might be very useful to introduce the scheme gradually, but it would never be completely and thoroughly effective.

185. Would the seaman get a ship at all if he did not produce his book at the beginning of the voyage?—If he could produce some kind of statement of service to the shipmaster he might. The master would be content to ascertain his service, and would look at the man, and if a better man was not available the master might take him.

186. What would be the harm if a seaman did not produce his old book and started a new one?—That would not disturb the present system, for instead of having a number of single certificates he would have a collection of books.

187. Of course if a man had a bad book he might throw it away and start another, but a seaman with a record of only one discharge in a new book would obviously be in a worse position than a better man who could show record of several discharges in an old book?—That is so now. A seaman who has only one discharge to show is in a worse position than one who has a cover full of them.

188. (*Mr. Howell.*) I suppose we may assume that a master now judges of a man's experience, and that if two men came to him for appointment on board ship, he would prefer the man who could show a record of eight or ten good discharges to a man of, say, thirty years of age who could only show a record of one discharge?—I think he would prefer the former.

189. It comes to this, that, of course, the seaman with the most satisfactory record is preferred by the shipmaster?—Yes. Unless you require the production of the certificate at the commencement of the voyage there is practically no change in the present system, for although a few men might get their certificates in a more convenient form for themselves it would not touch the case of the bad men.

190. (*Chairman.*) I don't quite understand the distinction you draw between the production of the certificate at the beginning and at the end of a voyage, for would not the certificate be naturally produced at the beginning of a voyage in order to enable the master to form some idea of the character of the man he proposes to engage?—Yes, the master should be required to keep the certificates throughout the voyage, and if a man deserted his certificate should be sent to the Registrar-General, and if a man had a bad character that could be entered on the certificate.

191. (*Mr. Howell.*) Is not that the practice in many ships now?—Yes, many of the masters keep the certificate for a short time.

192. But the captain has no legal power to detain it?—I think it is usually given to the seaman a few days after going to sea.

193. (*Chairman.*) You propose that the captain should hold a certificate as a security against desertion?—To make sure that the continuous certificate would be available at the time of discharge. If it were left in the possession of the seamen there would be no security at all that you will not have to issue a fresh book every voyage.

194. What can a seaman do with it on a voyage? When he is paid off he takes it with him to the office at which he is paid off?—But if he expects a bad character he will mislay it and he knows the master is required to give him a discharge. If the book is not forthcoming that does not relieve the master from his duty of giving him a certificate of discharge.

195. The master takes it to the office where the superintendent is to endorse the certificate according to the master's report. Then the seaman either throws his book into the sea or he keeps it, but if he throws it away when he goes again to try and get a ship he probably fails to get engaged because he cannot produce the book?—If the requirement were enforced that he should produce it on engagement he would come to the Custom House to get a copy and a register would have to be kept so that we could supply it.

196. (*Mr. Howell.*) When a man goes to the Mercantile Marine Office can he not have his character on a separate form if he likes?—No, I think not.

197. As I understand the Act the seaman can, if he pleases, insist upon having a certificate of his character upon a separate document, quite apart from his certificate of discharge?—I don't remember the exact wording of the Section.

198. The seaman could get his separate report of character if he chooses under Section 129?—The point is new to me.

199. The compulsion on the master is to give a report of character, and the superintendent has to give the man a copy and endorse it on the certificate if the seaman desires it, so that the option rests with the seaman. If doubtful of its value he can ask for it on a separate sheet?—The mere fact of it being omitted would excite suspicion.

200. Supposing it were the practice to issue the certificate of discharge by itself, and always take a separate character, that would not have the same effect, would it?—It would not. That would necessitate the seaman having separate bundles of documents.

201. (*Mr. Howell.*) It is now in the option of the seaman to do that if he chooses?—I don't think the seaman quite understands that.

(*Mr. Howell.*) That is quite possible.

202. (*Chairman.*) Would you suggest that if we tried this experiment there should be two forms of discharge sanctioned by the Board of Trade, or that if we put it in force at all, we ought to try and do it by approving a continuous form and that alone?—I should think that alone would be best.

203. The experience of the past has not led us to believe, if we had two systems running concurrently, the continuous system and the single system, that the seaman would be likely to adopt the continuous one in preference to the single?—No.

204. The optional character of the attempts which have been made up till now have probably been one reason of their failure?—Yes, I think the option has tended to defeat them.

205. Supposing the form sanctioned by the Board of Trade were a continuous one, how would that affect your office?—That depends very much on the conditions attached to it, whether it was made compulsory to produce it at the end or at the beginning of a voyage. I suppose all such certificates would be numbered, and in practice they would be produced at the beginning of a voyage, and the superintendent would be instructed to enter the numbers against the names in the office copy. We should then have the material available for keeping a register in the office. I think a register would be necessary in order that we should be able to give copies of these certificates.

206. Would that entail any addition to your staff?—Undoubtedly, it would be a serious task to keep up a

register. It would depend on what is to be put in the register, whether it was to affect all ranks and all ratings. I should estimate that a register containing the least possible particulars such as entries of engagement only would mean much extra work. If we had to keep a register for all classes and ratings, it would take something like fourteen men.

207. (Mr. Howell.) But it would be for the foreign trade only?—Then, probably, twelve men.

208. (Chairman.) What is the staff now?—About sixty. It is not only the additional men that would be needed, but the room for them, as we are now very much cramped for space.

209. Have you no place to put the twelve men?—No sufficient room for the men with their tables and desks.

210. (Mr. Howell.) I suppose the extra twelve men would be clerks of the lowest class?—It would be merely routine work which perhaps boys could do.

211. Or possibly women?—Yes, they might do the work.

212. At any rate the work would require the supervision of the present staff?—Yes, a little supervision.

213. Would the register be useful for anything else than to supply copies of lost certificates?—The register would be useful for several purposes. It would be necessary to detect the fraudulent use of certificates, or the use of cancelled certificates. The register could supply information that now takes a great deal of trouble to obtain. Relatives of seamen write frequently to us for information about their friends, and the superintendent has trouble in searching it out. At each mercantile marine office they keep a large engagement book, and I believe it involves much labour. That book is referred to, and its pages are searched to see whether any trace can be found of the seaman wanted. If we maintained a central register, perhaps these engagement books might be abolished, and the central register could do the work much better.

214. So that the suggested addition of twelve to your staff would not be confined to the continuous discharge business; but could be defended on other grounds, and would serve useful purposes apart from that?—Yes. I don't know all the uses to which the engagement book is put by the superintendents at mercantile marine offices; but if these books could be abolished it might

turn out to be a real economy to establish a central register. There must be an enormous number of entries at the different ports, and a mass of detail. The deserters' list would almost be useless if a central register of discharges were introduced. *Mr. G. A. Hooker.* 9 May 1899.

215. (Captain Chalmers.) With reference to a remark that a certificate of discharge would not be any good without a record of character, would not the fact of a man being able to produce a continuous record of service without any serious breaks in it, show at least that the seaman was industrious and kept his engagements, and would not that be an indication apart from a formal record of character that he was a man worth shipping?—Naturally it would speak in his favour; but it would be some years before the advantage of that experience would be available.

216. Then your objection would apply only at the outset of the scheme?—Mainly so. It might be several years before his record of service was sufficient.

217. I suppose it would require legislation to make the production of the seaman's book compulsory upon engagement?—I suppose so.

218. Could not the ship owners and ship masters so assist the scheme that instructions would be issued to demand the book, and not to ship any men who did not produce their books?—According to my experience we cannot much rely upon this. I have in mind the case of the prohibition of the use of advance notes which masters and seamen succeeded in defeating.

219. (Chairman.) What happens now in the case of foreign seamen who carry continuous discharges? When they are shipped in this country or discharged here, have they a copy of our Dis. 1?—Yes, they take our Dis. 1.

220. Do they under no circumstances insist that their discharge shall be entered in their books?—I never heard of such a thing. In fact the Act requires that the certificate of discharge shall be in accordance with the Board of Trade form.

221. Have you ever heard of any of the difficulties that you have mentioned being experienced in countries where continuous discharge certificates are used?—I do not know much of that. I have only a general impression and nothing that I could report with confidence from my own knowledge to the Committee.

## SECOND DAY.

*Tuesday, 16th May, 1899.*

PRESENT :

The Right Hon. The Earl of DUDLEY (Chairman).

Captain CHALMERS.

Mr. J. CLARK HALL.

Mr. W. J. HOWELL.

Mr. C. HIPWOOD, Secretary.

Mr. F. SHAW, called; and Examined.

*Mr. F. Shaw.*

222. (Chairman.) I understand you are the Superintendent of the Mercantile Marine Office at Cardiff?—Yes.

223. This Committee, as you probably know, is trying to find some means of establishing a form of continuous discharge, and we hope you may be able to give us your views upon that subject, founded upon the experience you have had with regard to the discharge of seamen. Would you please tell us about the present practice in your office? When are the discharges prepared?—Immediately before the discharge of the crew. The master gives the earliest notice he can, and deposits his papers. If the ship is to be paid off that day, a clerk is immediately told off to prepare the discharges.

224. What are the papers that you fill up these papers from?—The ship's agreement, and the official log book.

225. These give you all the information you require?—Yes.

2315.

226. Except with regard to the character?—The official log gives the character. 16 May 1899.

227. Is that entered before it is sent to you?—Yes; we see that the entries are duly made. If they are not, we ask the captain to put it right. Sometimes the characters are overlooked up to that moment.

228. The log is fully made up before it comes to you?—Yes, before it is deposited.

229. Has the seaman any voice as to the kind of character which the master enters in the log before he comes ashore; I mean, when the master is making up the log on board his ship, does he send for the crew, and tell them what sort of character he will enter?—No.

230. Do they know before they come ashore what sort of character they are going to have?—They may have some idea from their own conduct. They form an opinion as to what they deserve. Some of the seamen on landing begin

B

*Mr. F. Shaw.* to rail against the master for giving them, as they suppose, a bad character or a decline, when, as a matter of fact, he has really given them a good character, or even a "V. G."

16 May 1899.

231. Except for his own consciousness, I suppose the seaman is not really aware until he gets ashore what sort of character is recorded?—Not until he actually gets his discharge.

232. The certificate of discharge is prepared by a clerk?—Yes, by one of the clerks or deputies.

233. Have you anything to fill up when you give the certificate to the seaman?—No. It is then quite completed. All that remains is to get the man's signature to it.

234. Where does he put his signature?—Across the end.

235. And the master has to sign?—Yes.

236. At the same time?—Generally before the commencement of discharging the men. He signs them all at once.

237. And then have you to sign?—Yes. Either the superintendent or the deputy, who possibly has made out the discharges.

238. If any form of continuous discharges were adopted would that entail much extra work on your office?—It would depend upon whether we got the forms before the crew were paid off.

239. Has not the Federation some form of book?—It has a parchment and a book.

240. What does the parchment show?—It is a small certificate, which shows that the man belongs to the Federation.

241. Is not that what they call a ticket?—Yes, a Federation ticket.

242. But their book is a regular continuous discharge book, is it not?—Yes. It is a small cloth-bound book, with a record of service in Federation ships.

243. Of course, you have no cognisance of that officially?—No.

244. Do you know where the details of that are made up?—In the Federation office.

245. Does the captain of the ship send the ship's papers to the Federation office?—I think not, but he gets his crew together and collects from them such books as any of them may have.

246-7. If it is possible for the master to obtain these papers from the men belonging to the Federation, I mean the papers necessary for the clerk in the Federation office to fill in the necessary particulars beforehand in the continuous discharge book, it ought to be possible, if we had a general scheme of the kind, for the master to obtain the books for the use of the Superintendent?—There is a benefit attached to that. In case of accident the men are paid so much. It is a proof of service, and seamen are quite willing it should be posted up. The majority of the seamen have only the ticket, and not the book. The ticket does not entitle them to benefit; only the book does.

248. (*Mr. Howell.*) The number of books you would have to deal with if the system of continuous discharge were adopted would be much larger than the number of books the Federation has to deal with?—Much larger. In one vessel there may possibly be only three or four of these Federation books.

249. Would there be more trouble to your clerks in entering the particulars into a continuous discharge certificate?—There would be delay. We could not get the preliminary part of the work done unless we received the particulars in the morning. It would cause delay if we had to wait till the master arrived at time of discharge, and brought these books with him. The opening of the books and the preparing of them would take some time.

250. (*Capt. Chalmers.*) Would it not be the practice of the captains, when they gave notice that they were going to pay off, to send in the books at the same time. You get notice now from the captain, or from the broker's clerk, that the discharge is going to take place. What notice do they generally give you?—Perhaps half an hour or an hour.

251. Then you have to prepare the discharges?—Yes.

252. You would be in the same position if they gave in the books at the same time as the notice?—Yes, with the exception that it would take longer to fill up the books than to write out the discharges.

253. Would there not be less writing?—Not if you

propose to put a character on the continuous discharge, in addition to the other particulars of name, ship, rank, dates, and so on.

254. (*Chairman.*) Why should it take longer to enter fewer particulars?—There would be some delay in getting the books ready and removing the bands from them, and opening them at the proper page.

255-6. Let me assume that you get the continuous continuous discharge books at the same time as you get the notice and the ship's papers; would it then take longer to fill them up?—Perhaps not very much longer.

257. You don't think it would entail more labour if you were able to get the books beforehand?—Very little more.

258. On the other hand, of course, it is obvious that if you did not get the books beforehand, but had to wait until every seaman searched in his cap or in his pocket, it would take some time?—I think it undoubtedly would.

259. You don't suppose that under any circumstances the use of continuous discharges would entail an increase of your staff?—I am inclined to think it would. We sometimes get a dozen or more ships paying off in a day, and this would increase the labour.

260. (*Capt. Chalmers.*) Even if the books were handed in when notice was given?—I think so.

261. (*Chairman.*) Why?—It is easier to write consecutive sheets than to fill up discharges bound in books. When a man is filling up a number of sheets with say the name of the same vessel he has no need to refer in each case or to find which book belongs to a particular man.

262. (*Mr. Howell.*) Do you put more than one clerk to the work of one vessel?—Sometimes we have two or three. Perhaps one clerk, who fills in the age and place of birth of the man, will hand it to another clerk, who fills in the name of the ship, dates, &c.

263. If one did the entering up and the other read from the log book, would they not get very expert in time, so that very little additional time would be spent in the work?—No doubt they would become expert.

264. I don't think any of us quite understand why the clerical work under a continuous discharge system should take much longer?—I did not say very much longer.

265. I think we may take it that you think a continuous discharge system would entail more work and would involve some additions to your staff?—Yes.

266. (*Chairman.*) At any rate, Mr. Shaw declines to pledge his present staff to undertake the whole of the work. When a crew is shipped now does the master retain the previous discharges?—It is the usual practice to retain them.

267. Merely the previous one, or the whole of them?—Generally the last one. Some masters try to retain the whole, and some do so, but the seamen do not approve of that.

268. The whole bundle?—Yes. The discharges may all be in a discharge cover book. The seaman generally removes the last one and hands it to the master.

269. Do you find that these book covers are much used?—I should think about a third of the men shipped at Cardiff have them. The demand seems to be steadily increasing.

270. Do you issue those books from your office?—Yes, we charge sixpence each for them.

271. I suppose if we introduce a form of continuous discharge the first form ought to be given to the men free?—I think so, if its use is to become general. There were very nearly 2,000 of these discharge covers issued in Cardiff during the year before last.

272. (*Mr. Howell.*) Have you the figures for last year?—Yes, the total for the port of Cardiff then was 1,054, but on account of the four months' strike these figures are rather illusory. The figures for 1889 were 1,219. In 1895 there were 1,596, and in 1897 there were 1,963. This year, so far as the first quarter has gone, the total is 607.

273. (*Chairman.*) When does the master return to the men the discharge which he holds?—Generally during the voyage.

274. What is his particular object in returning it during the voyage. I suppose he holds it to prevent desertion?—That is the idea.

275. Then why should he return it during the voyage, when the seamen can desert at a port towards the end of the voyage, just as well as at the beginning of it?

—It is generally given after leaving the last port, practically just before the seaman returns home.

276. After his last chance of desertion is gone?—Yes.

277. I have a form here which is called Eng. 2, in which the master records any changes that have taken place in his crew during the voyage?—Yes. That is sent back after the vessel leaves, if there are any changes.

278. After she has left port?—Yes, it is generally brought ashore by the pilot.

279. If any men have been shipped at the last moment their names are recorded here?—Yes, any substitutes.

280. Who does the substitute sign before?—Not necessarily before any official; the master is empowered by the Act to ship substitutes himself at the last moment.

281. And the seaman signs a sort of supplementary agreement before the master, does he?—Yes. If one of the outdoor officers of the Board of Trade is at hand, the master may call upon him to witness it on board the ship.

282. If the master holds the last discharge of any seaman who either deserts or does not turn up when the ship sails, are these discharges sent back to you with the Eng. 2 form?—Not in every case; occasionally they are.

283. Only occasionally?—Yes.

284. Is there any statutory enactment about it?—No.

285. Is it purely within the option of the master to do as he likes in the matter?—Yes.

286. If he retains them I suppose he tears them up or burns them?—Occasionally masters bring to us a handful of unclaimed discharges at the close of the voyage.

287. What would you do if you had a certificate of discharge handed back?—If the owner applied for it we should return it to him.

288. Although you knew he had not turned up to go with the ship in which he had contracted to sail?—Quite so.

289. It is no part of your duty to record that fact upon the discharge?—No; we keep a record of the men who fail to join their ships, which may be shown to any master who asks to see it.

290. Supposing you knew that a man who is signing on is upon that black list, and the master does not ask to see that list, would you tell the master?—No; we should take no step.

291. And now, will you please tell us your views generally upon this question—whether you think it is possible to introduce a form of continuous discharge; are you satisfied with the present system, or do you think it might be improved upon, and if so, how?—I am inclined to think that a form of continuous discharge is an impracticable idea. It has been tried upon one or two occasions. It was tried in the first instance, I think, in 1844, when the register ticket was introduced, and it was abolished because it was found to be quite impracticable. It worked for a few years only. Then the E 2 certificates were introduced, and when used by seamen they were often in a very dirty, greasy condition, and it was difficult to write upon them, which caused delay. The men also frequently lose their discharges.

292. I don't quite follow you. Why is it so impracticable? The only reason, so far as I know, that you have given is that the tickets became so greasy that it was difficult to write upon them?—That was the case with the parchment certificates.

293. And I suppose they might lose them?—Seamen do frequently lose their discharges. We have no record of the number lost, but it is a large number.

294. But I suppose if they showed any good cause for the loss of them, such as a wreck or anything of that kind, you could give them another copy?—Would the idea be to make the continuous discharge go back to show a man's entire service, or would it merely commence at a certain date?

295. That would be a question for consideration. Supposing they started from a certain date?—It would entail a great amount of work now to start a system of continuous discharges covering a man's entire service.

296. Not if it was not made retrospective?—No, but there would be nothing to prevent a seaman getting two or three discharges.

297. Why?—If they were issued locally. He might change his port. If men misconduct themselves they shift their ports. If a man lost or destroyed his paper he could get another one at another port.

298. How?—At the shipping office.

299. Please describe to us by what operation a man would do that. Suppose that a man ships from Cardiff, and that the first entry in his continuous discharge is a bad one, that is, assuming that character and ability are included. Do you say that he might lose it—throw it away, in fact, and change his port?—He would ship at another port without a discharge.

300-1. Don't you think it would be more difficult for him to get a ship without a discharge?—

(Mr. Clark Hall.) At the initial stage the seaman might produce his old discharge and merely drop the one voyage.

(Chairman.) You mean he might produce his old single discharge. No doubt he might do so. That might be so at the outset in some cases, but not afterwards?—

302. (Mr. Howell.) Precisely the same thing might be done under the present system. A seaman may not produce his last certificate if it is a bad one. If he chooses to leave out the certificate of a voyage that is not creditable to him, he can do so?—And he does do it.

303. Then what distinction do you draw between that and the continuous discharge?—He might lose it purposely if he had a bad character.

304. That would apply in either case?—But the continuous discharge would lose its value if incomplete.

305. (Chairman.) At first a sailor might make out that he had not been to sea since the inauguration of the new system; but after a time the possibility of taking in a master in that way would grow less, would it not?—I think so.

306. And it would be no new evil, because it is done almost every day with the present discharges?—If a man had a continuous discharge book in which his character was recorded, I think it would be somewhat unfair to the man that he should be bound to produce against himself evidence from it of an unsatisfactory character.

307. Why?—It would prevent him getting employment.

308. (Mr. Howell.) Suppose the certificate of discharge were simply a record of service, what would you say then. Your objection would not then apply?—No, it would not, so far as the character is concerned; but the present Act of Parliament states that the character shall not be inserted unless the man so wishes it.

309. Supposing this Committee were to advise a continuous record of service that did not contain a record of the man's character, would not a great deal of your objection be removed, because a man could not object to a record of the facts of his service?—I rather think the fact that there was no record of character on the continuous discharge which was introduced in 1884, was to a great extent the reason of its failure.

310. Do you mean that the absence of an endorsement of any sort of character would be regarded as equivalent to a bad character?—Yes, if there was a space provided for the character.

311. Suppose there was no special space reserved for the record of character. What then?—If there was no record of character, the captain would have no means of satisfying himself whether the seaman was a good man or not.

312. But it would be at the option of the master to call for some other document to prove character?—Yes, he might have a reference.

313. Suppose the Committee were to recommend a continuous discharge certificate which should be simply a record of service, and that, if the seaman wanted a character, it should be given to him on a separate document, half of your objection would be removed?—Yes.

314. (Chairman.) Why do you think it would be unfair or hard on a man to be forced to produce his last discharge with a bad character? Why is it harder that a seaman should find it difficult to get employment with a bad character than that a domestic servant who loses his character? You don't think it hard, when you have reason to discharge your cook, that she should find it difficult to get another place because you have refused to give her a character. Why should it be harder for a seaman to be placed in the same position?—I think in different characters, or even "bad" or "declined," are occasionally given by shipmasters for very trivial causes. If a seaman has behaved himself well for years and then makes a mistake, and gets a "declined" character, it would be hard upon him to be bound to produce his book with that entry.

315. (Mr. Howell.) Do you think that a master, find-

Mr. F. Shaw.  
16 May 1899.

*Mr. F. Shaw.* ing a record of five years' good character, and only one bad character, would take any serious notice of the latter?—Masters usually look at the last character.

16 May 1890.

316. (*Chairman.*) You think there would be some danger of a seaman getting a bad character for a petty offence?—I think so.

317. Do you see no possibility of safeguarding that? Would there be no possibility of an appeal in such a case before a superintendent?—

(*Mr. Howell.*) I think Mr. Shaw would tell us that there is no provision in the statute for that.

318. (*Chairman.*) Suppose we had the power of making laws as we wished, would it not be useful to give the superintendent some power to veto a bad character unfairly given?—I am afraid that would be a very difficult thing to introduce.

319. (*Mr. Howell.*) On the ground that the master, who has daily experience of the sailor, is really the best judge of the man's character?—I think so.

320. Is it not your experience that officers very lightly give the "V. G." when the seamen do not deserve it?—Yes.

321. That rather destroys your other argument, because, although there may be cases of harsh masters, you have a large preponderance of masters who are willing to give a "V. G." character even when the seaman does not really deserve it?—That is so. I don't think characters are given with sufficient care, although matters are better in that respect than they used to be.

322. I suppose you think the feeling of most masters is to let bygones be bygones, and to give the seaman a "V. G." discharge when they are parting with him?—Yes.

323. (*Chairman.*) It would follow that the master's recorded opinion of his crew is not worth much, if he gives a "V. G." discharge to a bad man, or gives only a "G." discharge, or possibly even something worse, to a good man?—I have known cases where masters have sought to alter the character after the log-book has been deposited, because perhaps the seamen has made some remarks against the provisions supplied during the voyage.

324. (*Mr. Howell.*) And you have found other masters willing to efface a bad character, and to give the seaman a good discharge in spite of the log, through taking into consideration his conduct subsequently to the entry in the log?—Such entries do occur.

325. There is a disposition, in spite of adverse entries in the log, to give a "V. G." discharge. Is that your experience?—That is the case occasionally.

326. (*Capt. Chalmers.*) In a case of that sort, where there are entries against the seaman for drunkenness or insubordination, and no subsequent entries as to his conduct being condoned, have you any power, when the master brings up the official log, to prevent the master giving him a "V. G." discharge for both conduct and ability?—We are instructed in such cases to issue the discharge without a signature.

327. Is your power under the Act not limited to this, that you have to give the man a copy of the report as it appears in the official log?—That is so.

328. Then where does your power come in to protest to the captain or to say to the seaman, "I am not going to let you have this character"?—I mean, if you are really limited simply to re-producing a copy of the report from the log?—The report is made by the master, and we are not responsible for it. I don't think that a master would often attempt to give a "V. G." character to a seaman who had occupied pages in his log-book with reports of misconduct, unless indeed an entry were also made that the seaman's subsequent conduct had improved.

329. Supposing you met such a case, you have no power to prevent the man getting a "V. G." certificate?—The only way would be to issue the certificate without our signature if we found the character was different from the entries in the log-book.

330. Have you power to do that?—We have instructions to do so.

331. (*Chairman.*) What are the points to which you think that a master pays most attention in engaging a crew? I mean, what does he seek to satisfy himself of more than anything else?—Appearance. He looks at the man, and forms his opinion of him.

332. But in looking through the man's papers, does he care more for his general sobriety, or his ability as a seaman, or the length of time he has been at sea, or whether his last discharge was a "V. G."? What points do you think a master is keenest about?—He is taken

most by the man's appearance. He wants to have a likely looking man.

333. Smart looking?—Yes. He does not peruse the certificates very carefully. He takes the last discharge if it is satisfactory. The sailor may hand him a number of discharges. Foreign seamen produce the longest record of discharges, and take most care of them. They are able to produce more of them than our own British sailors.

334. Why is that?—I think they are more careful.

335. Do you think that masters are now rather careless in selecting their crew, and that they ought to pay more attention to the previous history of the men?—Often they do not take very much pains, especially in cases of steamers where it is known that the voyage will be short.

336. Don't you think that a really good seaman would have greater advantages in the way of showing his worth under a form of continuous discharge than he has under the present system?—I have no doubt about that. If he could show a long period of good service he would stand a better chance possibly than a man who had not such a good record.

337. Only "possibly" better?—That is all, I think. The seaman, as a rule, does not take much care of his discharge certificates, and can obtain employment with only his last one.

338. But under a continuous form, would he not be forced to take more care?—He would then have only one to lose, and might possibly take greater care of it.

339. (*Mr. Clark Hall.*) How would it affect his chances of employment if he lost his one continuous discharge just before being engaged?—He would have to send up to London to get another. In the meantime he would possibly ship at the pier head without production of a discharge.

340-1. (*Chairman.*) Do you think, if the difficulties you have foreshadowed could be got over, that a general system of continuous discharges would be beneficial in the interests both of the seamen and of the owners?—I should think it would.

342. Theoretically you agree with the idea?—Quite so. No doubt it is much better for a man to be able to fall back upon one document. Many seamen make so many short voyages that they would probably soon fill a book up, but a man might have several books. Of course these would contain a thorough record of his service if he took care of the books.

343. (*Mr. Howell.*) You say that you think the system of continuous discharges would be theoretically a good system, but you think it impracticable?—I think so.

344. Of course you know that such a system has been recommended by several Committees and Commissions, and various attempts have been made to introduce a system of continuous discharges? Are you of opinion, because they have been abandoned, that all these attempts, whether well considered or not, have failed in practice?—Yes.

345. You told us that an increasing number of seamen were using the pocket-book containing their certificates?—Yes.

346. Does not that show an appreciation on the part of the seamen of something like a continuous record of their services, otherwise they would scarcely buy these books for the purpose of keeping their certificates together?—Yes, they take better care now of their papers.

347. I suppose we may assume that the fact of their buying those book covers to keep their certificates together shows that they appreciate to a certain extent the value of a continuous record?—Of course, the book cover is merely a case for holding the discharges, and the men take care of such discharges as they wish to preserve.

348. If a man puts all his discharge certificates in that case or cover, it does provide him practically with a continuous record of his service?—It does.

349. (*Capt. Chalmers.*) If the use of a continuous certificate of discharge were made compulsory, and if it were the only form provided by the Board of Trade, would you then call the system impracticable?—If you have two or three forms running at the same time, they would not be taken up.

350. But supposing the continuous certificate was made the exclusive form of discharge—the only one approved by the Board of Trade—and that no seaman could be discharged except upon that form?—Then it would be bound to come into general use.

351. And there would be nothing to stand in the way

of its practicability?—I am still of opinion that it would be unfair to the seaman to make him produce an unsatisfactory report of his character.

352. I am coming to that. You think that in justice to the men the certificate should be exclusively a record of service and not of character?—I think it would be unfair to record the character in a compulsory and continuous discharge.

353. Do you find that it is generally known among seamen that they can exercise an option in that matter?—It is not known, and the option is never exercised.

354. So that the practice really is for the superintendent or deputy superintendent to hand the men the discharge certificates bearing a record of character, without asking them whether they want that character or not?—We do not ask them.

355. (Chairman.) I suppose you know that by the Merchant Shipping Act the Shipping Office may be called upon to give the man a record of character upon a separate document altogether from his discharge?—Yes.

356. But as there is no form at present approved by the Board of Trade for the Shipping Office to use under such circumstances, the practice has arisen of endorsing the character upon the certificate?—Yes. Section 129 of the Act provides that the master shall, if the seaman desires, give to him or endorse upon his certificate of discharge a copy of the report as to character.

357. If he desires it, you can give him upon a separate form a copy of the character which has been entered on the official log?—That separate form is the discharge certificate.

(Chairman.) I think not.

(Mr. Howell.) The seaman has to be furnished, if he desires it, with a record of his character, either on the back of his discharge certificate, or upon a separate form.

358. (Capt. Chalmers.) Section 129 gives the seaman the option?—Yes.

359. That being so, would it meet your point as regards the alleged injustice to the seaman if the continuous form merely contained a statement of his service, and if the seaman were able to obtain under Section 129 a separate record of his character? That section empowers him to obtain a copy of the report of his character as recorded in the log. At the time he signed on for his next ship, he could then produce his continuous record of service, and unless the master also demanded proof of character, the other paper containing his record of character could be kept back altogether?—That would clearly amount to introducing two documents.

360. (Mr. Howell.) Suppose a seaman now exercised the option that he undoubtedly has, and asked you to give him his character on a separate document, what would you do?—I am afraid we should hold him to the certificate of discharge in the ordinary form as provided.

361. (Capt. Chalmers.) Could you not take a blank slip of paper and rule out columns upon it for extracts from the official log, so as to give him a copy bearing the office seal and your signature?—Yes, that could be done.

362. Don't you think that would be a compliance with this section 129?—I think there is no doubt that if the seaman received a discharge without any character, he would ask the master for a character, and to give him one upon another form would be just doubling the work.

363. (Chairman.) If a seaman, having read the section, said, "I am not satisfied with that endorsement, and I want you to give me my character on a separate form, namely, a copy of what the master has recorded about me in the log," what would you say to him?—I would say, "There is no form provided for the purpose."

364-5. Are you sure that it is necessary that there should be a form? The section reads: "Where a seaman is discharged before a superintendent, the master shall make and sign on a form provided by the Board of Trade a report of the conduct, character, and qualifications of the seaman discharged, or may state on the said form that he declines to give any opinion upon such particulars, or upon any of them, and the superintendent before whom the discharge is made shall, if the seaman desires, give to him or endorse upon his certificate of discharge a copy of such report of character." From that it would appear that the copy if demanded need not be upon any form approved by the Board of Trade?—Perhaps not.

366. (Chairman.) Don't you think it would meet your view of the injustice of a continuous record of character if that section were fully carried out, and if a seaman received upon a separate form, whenever he desired it, a copy of his record of character?—I think so.

367. You might then have two books of continuous discharges—one of service and the other of character, such as they have now in some foreign countries, including Germany?—Occasionally we have these books presented by foreigners. Mr. F. Shaw  
18 May 1899.

368. Have you noticed that their books only show service, and that their characters are recorded upon a different sheet?—I have not noticed that.

369. (Capt. Chalmers.) If the certificates were simply a continuous record of service without character, and the seamen made a point of never asking for records of character, would there be any difficulty in that man getting a ship?—I think there would.

370. After producing his continuous record of service? I am still assuming that the seaman has got his continuous record of service showing, if the captain takes the trouble to look into the matter, that there are very few breaks—only such as are necessitated by short holidays, and that there are no desertions, and that all the entries are in order. Supposing that were to go on for a year or for eighteen months, would not that in itself be sufficient to prove that the man's character is good?—When once you have got the idea accepted that the certificate merely shows the service, it might gradually come to be accepted as sufficient if the record of service were satisfactory.

371. So that you would only anticipate a difficulty at the outset of the scheme?—Yes.

372. And all schemes have difficulties at the outset, have they not—especially those dealing with seamen?—They have. It is natural for seamen after a voyage to have some certificate of conduct instead of one merely showing service. It would have to be explained if there was no certificates of character that none were given.

373. (Chairman.) If the seaman chose he could still have his character record in a separate form?—Yes.

374. (Capt. Chalmers.) Supposing the certificate were only printed on the face and the back were a blank, if the seaman wanted his character endorsed on that blank, you could turn over the certificate and stamp it by means of a rubber stamp with the letters "V. G.," or whatever else was proper, and with the office seal. Would not that be doing what the seaman wished you to do and affording a sufficient record of his character?—Yes.

375. Don't you think it would be best to do that and keep out of the form altogether any lines or columns indicating space for records of ability or conduct?—I think it would be better to keep the lines off the form.

376. In connection with the report of character which the captain is obliged to give in the log book, has it ever been treated as an entry which requires to be read over to the seaman before he leaves the ship?—I think not.

377-8. It has not been your practice so to regard it?—It has not.

379. Do you think that if we choose a book form that the books should be numbered?—I think so.

380. And, of course, they would bear on the face of them the man's name, age, height, complexion, and general description?—I think it would be advisable to put these particulars there; in the case of the parchment form I think the record had to be sent to the Registrar-General.

381. Would it be practicable at the time of engagement for the men to produce their books and for an entry of the engagement to be put in the discharge form at the beginning of the voyage?—It could be done. The certificate could be partly filled up.

382. There would be no difficulty if the masters and owners assisted by requiring every man before he signed to produce his book?—That could be done. It would so far relieve the discharging clerk, but it would not materially affect our work.

383. You have no power to enforce that at present, have you? I suppose it could only be done by the agreement of the masters and owners?—The entry would be made by our own officials.

384. I suppose the only means of effectually compelling the production of the book would be by the master saying to each man: "If you don't produce your book, I shall not ship you"?—Yes; but the master need not refuse to ship a man if he says he has lost his book.

385. (Mr. Clark Hall.) If the man said he had lost it, would you not require to issue another one for him?—Yes. If the entry had to be made at the time of the engagement he would have to get a fresh book at once.

(Chairman.) Thank you for your evidence.

Mr. T.  
Porteous.

16 May 1899.

Mr. T. PORTEOUS, of the Victoria Docks, London, called; and Examined.

386. (*Chairman.*) I understand you are superintendent of the Mercantile Marine Office at Victoria Docks, and that you have been employed under the Board of Trade since 1863?—I have.

387. What has your experience been during that period?—I was in the Bristol office from 1863 to 1881, then I was a clerk and deputy, and from 1881 to 1883 I was superintendent at Avonmouth. Since 1883 I have been at Newport till 1892, and from 1892 I was at Grimsby until 1897, when I came to Poplar.

388. May I take it that the practice of your office in London is the same as at other offices with regard to the filling in of the certificates of discharge, viz.: that a clerk fills them in before the seamen come to be discharged?—No. I should think we do not fill in discharges for more than from six to ten ships in a year in our office. They are all filled up on board ship. I think it is rather extraordinary, and I don't think that applies to any other office in the kingdom, to such a large extent. Victoria Docks is my first experience of that kind.

389. Yours is an exceptional case where the certificates are not filled up in the office?—Quite so. We don't fill them up at all.

390. In other cases they are filled up in the office?—Always.

391. But at Victoria Docks they are filled up on board ship?—Yes.

392. Do you know any reason for that?—The explanation given to me is that when the office first started the work grew quicker than the Board of Trade supplied the staff, and the ship masters, who were in a hurry to pay off, said: "I will make out the discharges for you." The result is that now when a vessel is telegraphed from the Foreland the captain wires to his owner: "We shall dock to-morrow morning at 10 o'clock." The owner may write or wire: "We shall want to pay off at 12 o'clock," but if a fog comes on it may be the afternoon before the vessel arrives, and in any case we never send the master away without his crew being paid off.

393. When do you tally that part of the discharge which deals with character and ability with the official log?—I am afraid that may be overlooked.

394. (*Mr. Howell.*) It is all filled in when it comes to you?—Yes.

395. You have not time or staff to examine it?—Not to examine it properly. We sign and we are responsible for that signature.

396. How about your responsibility in the case of a man who gets a "V. G." discharge in the log, and yet by some oversight has only a "G." stamped on his certificate?—Perhaps I ought to have explained that we fill up all the characters. We stamp all the characters from the log. There are very few changes in the large vessels with which we have to do. By consent of the Board we give a blank book of discharges to the officer.

397. I suppose the ships you have to deal with are mostly large vessels?—Yes, they are nearly all liners.

398. And therefore their resources for doing clerical work of that kind are much greater than would be the case with the smaller and less prosperous classes of vessels in some other ports?—Yes. These line steamers have either a purser or a writer on board. Indeed, the P. and O. Company carry a writer as well as a purser.

399. Supposing that a man came ashore to be discharged and asked you to give him a record of conduct on a sheet of paper separate from his discharge, what would you do? At present the man's record of character is stamped upon the discs, but supposing he said that he was not satisfied with that, and wanted his character on a different form or sheet, what would you do?—We have nothing to give him instead.

400. What answer would you make to him?—That he must have the ordinary certificate and nothing else.

401. Have you ever heard of a seaman demanding a record of character on a different sheet of paper?—No.

402. They do not know that the Act empowers them to claim that if they like?—No.

403. Or that they need not have these endorsements unless they like?—No, no information of that sort is given to them.

404. (*Mr. Howell.*) Perhaps it has not occurred to you

that it is not an endorsement to put the character on the front of the document instead of on the back of it?—It used to be put on the back.

405. (*Mr. Clark Hall.*) Have you ever had a case where a seaman with a bad character has asked you to cross out the discs or to put nothing in?—No; he simply tears it up in such a case.

406. (*Chairman.*) Under your eyes?—Yes, and perhaps throws it into the spittoon.

407. The whole certificate?—Yes.

408. Is that done by men employed on these big liners?—Yes.

409. And will they get a ship again?—They will not get the same ship again, or same employ.

410. Do you find that the man who tears up a bad discharge leaves the port so that you never see him again?—We cannot tell that. He might go into another line until he gets a good discharge.

411. Have you seen men shipped into other vessels whom you have known to have torn up their last certificate?—I could not say. They would keep away from our office some time so that we should lose record or recollection of them.

412. Are the masters of these big liners careless or careful about the selection of their men?—I think they leave it entirely to their chief officer and chief engineer.

413. Are these officers careful or careless?—Careful. They are sometimes open to give a malicious character if the seaman has not done what they please, and the master generally supports his chief officer.

414. Do you find that these officers who are entrusted with the work of engagement and selection look to the men's discharge certificates?—Yes; upon the liners we have to do with they are careful.

415. Do they look at several discharge certificates?—Yes.

416. If a man produced some old certificates for two or three years and then said he had not been to sea since, would not that be suspicious?—Yes; such a statement would not be accepted. What I have been saying does not apply to other offices that I have been in.

417. Do the officers weigh considerations as to character?—Certainly.

418. Do you find that at Victoria Docks there is less producing of old certificates of discharge and less tearing of new ones than you have known in some other places?—Yes; very much less. I think ours is a most orderly office. We get a drunken or obstreperous man occasionally, but on the whole the character of the men who come to our office is very good.

419. Better than at Grimsby and Newport?—Yes, and especially Newport. The only troublesome men we have had are Liverpool and Glasgow firemen.

420. We are considering whether any form of continuous discharge can be adopted. Have you got any views about that?—At Bombay they have a continuous discharge, and during the last few days I found that Mr. W. H. Walker, late shipping master there, is now living in England. I put myself into correspondence with him, and have received a memorandum from him. He was the originator of the system of continuous discharges in Bombay.

421. Is it a purely voluntary system there?—He says it is not compulsory, but it has become practically universal in Bombay. Masters of vessels with native crews see it is a guarantee of the qualifications of the holder, and back up the Shipping Office by refusing to ship any native seaman (except a first voyager) who does not possess one. The masters found a great change for the better in the personnel of the crews after the continuous discharge system got into operation. The contrast in that respect is said to be very striking between Calcutta and Bombay, for in the former city the system has not been adopted, and the crimps throw any sort of trash on board ship. A chief officer has told me that they go two or three days' run to Chittagong for good men, as that is a nursery for good sailors.

422. Do the continuous discharges in Bombay apply to European crews or only to natives?—Only to natives.

423. Is a charge made there for the continuous discharge?—Half a rupee.

424. I suppose that is the initial charge for the book?—Yes, for purchasing the discharge, which takes the form of a roll in a tin.

425. What fee, if any, is charged for its renewal?—Eight annas, in the first instance.

426. When lost?—If the last discharge recorded on the lost certificate was a bad one (i.e., decune), the charge is five rupees on the assumption that it was purposely lost, but if the last record was a good one then the charge is a rupee. All fraudulently altered certificates are correctly re-copied, for which the holder has to pay five rupees, and a note of the fraud is made on the copy.

427. When filled up?—When the continuous discharge is filled up the seaman is granted a second issue, which gives a summary of the first, viz., so many voyages in the P. and O. Company, so many in the Clan Line; and in prosecuting those voyages he received so many V. G.'s, so many Good, Fair, Middling, and Decline, both for ability and conduct. The first line on the second issue is filled up with the last voyage and its character and wages as a fresh start, and the first certificate is then ruled across from corner to corner, and given to the seaman, who is advised to take care of it, but he can never ship on it, as the crossed ruling betrays the fact that there is No. 2 somewhere. Mr. Walker further writes: "The same rule is observed when No. 3 and No. 4 are issued. No seaman had reached No. 5 when I left Bombay. All these certificates are entered in a ledger: name, probable age, height, marks on person, and in the case of Nos. 2, 3, and 4, the summary of characters is also filled in, and thus a full description of every man going to sea is on record in seven large ledgers in Bombay. All damaged or torn certificates are replaced by the Shipping Office in those cases where the seaman is not responsible. The origin of the continuous discharge was my own dissatisfaction at the little that I knew of what was going on in my own office as regards the shipping and discharging of native seamen; and I went to the Government of Bombay with my objects and reasons in 1875, and after some correspondence, operations were commenced in November of that year, and when I left in April, 1896, over 58,000 were in circulation; and they have given satisfaction to all concerned with the one exception of the Serangs, who are not allowed to say Yes or No to anyone who is about to be shipped or rejected. My objects in introducing this form of discharge were: To identify the seaman with the discharge he produced; to make him stand alone and compel him to be independent of Serangs, who used to sweat him (I think there are cases now); to eliminate all the rowdy element amongst native crews; to show native seamen that if they did not behave at sea they would get bad characters, and it would only be a question of time when they would never get a ship if their discharge were ever shown to any master shipping a crew. There are several men working at daily wages who could not or would not behave themselves at sea, or at ports of call, and they cannot ship out of Bombay because no one would look twice at five or six declines on their certificates, and on the third decline we used to recommend them to look elsewhere for work, and this they were compelled to do. Amongst deck crews there are some seven or eight rates of wages according to ability, but the moment decline was written in either column it meant *two rupees per month less next voyage*. Engine room crews, having fixed wages in their several grades, were left severely alone, and they are fully alive to the value of a good discharge. During the last fifteen years of my official life I alone used to issue certificates, and measure and write down any marks, etc. We used to have about forty fraudulent alterations in the year, generally as regards their conduct or ability, although there were cases in which the height or marks were dealt with, but so clumsily done that it never escaped detection. Sometimes these certificates were found to have been stolen, but they were of no use except to the owner. In the event of any seaman deserting at any port during the voyage, the fact was noted on the certificate, and when the owner turned up he was asked to refund any unearned wages (they always receive their month's advance in cash) and if 'as was often the case) he pleaded that he had no money he was told to call when he had, but there was no hurry about it, any time would do. After we had these certificates in use about eight or nine years, Calcutta was ordered to adopt the same system, but, properly carried out, it interfered too much with certain interests, and therefore it never found favour with them, and has been permissive through indifference, and Calcutta is now the same as she was thirty years ago. More I cannot say, but Captain Hutchinson can enlighten you on other points. I felt amply rewarded," adds Mr. Walker, "for the time and trouble I had been at to bring the continuous discharge to

its successful working, when I was asked to send crews to join the City Line steamers in Calcutta, and we did on more than one occasion send crews and part crews across India by rail to join vessels moored, so to speak in the shadow of the Calcutta Shipping Office, and we never lost a man by desertion, but always received a telegram: "Men all right on board the steamer." I had nearly forgotten to mention that all characters below "V. G." were entered in a book for that purpose; it only contained the consecutive number and the character, and the book was productive of many fines of five rupees. I should mention that any man coming forward and saying he never had a certificate was shipped at lowest wages and grade, and never allowed to jump into high wages as a first voyager."

428. Does it not strike you that, excellent as that system may be, it is a little high-handed, and I am not quite sure that Britishers would appreciate all these rules?—Perhaps so. Another difficulty is that there they have plenty of seamen; but that is not always the case in our ports.

429. For instance, if we take the point after the third "decline," about advising the seaman to look out for other kind of work, the answer of the English sailor who was so advised might be rather strong?—No doubt.

430. Is it your opinion that we might attempt to put some system of continuous discharges into force here?—I think so.

431. Upon what lines do you think a scheme would be most likely to succeed? Take, for instance, the point about character and ability. Would you favour a system by which a discharge certificate shows also the character of a man or merely his service?—His character.

432. As well as his service?—I don't think a record of his service only would be of much value to him. Of course, I am speaking of able seamen and firemen; it might be different with officers.

433. You don't think the discharge would be of value if it did not also show the character?—I don't think so.

434. Supposing there were places for the record of character, but that he need not have it unless he liked, do you think the absence of any such record would destroy the value of the certificate? At present it is within the seaman's option. He can take his character or not, as he likes. If a man does not choose to have any record of his character put in his present discharge, he can maintain that attitude?—I think he ought to have that option.

435. Even under the continuous form?—Yes.

436. In carrying that same plan out, suppose you had a plain blank back to the certificate, without any of the present discs, and the seaman chose to have a record of his character as well as his service, the office could stamp a "V. G." or a "G." upon the back, as the case may be. A good man might then show, not only his record of service, but also some proof of his conduct and ability as well; whereas the bad man would probably not want a record of his character. A careful master might, therefore, be able to see from the absence of any record of character that there was something suspicious about the case; unless he thought that the records of service gave him sufficient indication of the seaman's character?—Quite so.

437. Would not that probably be just as efficacious as a lot of bad marks, i.e., the absence of a character might mean almost as much as the bad marks?—I quite agree; but if a master is judicious and careful, he will not decline to take a seaman because he has one bad mark against his character. I have asked some masters what view they would take of a suggestion of a bad character, maliciously given, and they have replied that, if a seaman had been two or three voyages in another ship with "V. G." they would consider that on the whole he had behaved himself well. They would look to see whether a man had gone more than one voyage in a ship rather than one voyage, even if he had made a mistake, and got a bad character for that one voyage.

438. Even although the last discharge was a bad one?—Yes.

439. As a matter of fact, although a master may say that, if you were yourself engaging a crew, and saw one man who had a clean sheet, and another who had a bad mark on his last discharge, would you not, other things being equal, prefer the man with the clean sheet?—I would. The man with the bad character must suffer.

440. Therefore he would only be taken by a liberal-minded master if he happened to find himself in company with other seamen who also had bad marks, but if

Mr. T.  
Porteous.

16 May 1899.

Mr. T.  
Porteous.

16 May 1899.

there was a sufficient supply of the best men, is it not probable that he might find some difficulty in getting a ship?—Certainly.

441. (Mr. Clark Hall.) Does that apply to Bristol as well as to the Victoria Docks?—There is sometimes a scarcity of seamen in Bristol.

442. (Chairman.) I think the point of Mr. Hall's inquiry was whether the masters at Bristol are less careful than those at the Victoria Docks, and that, therefore, a seaman with a bad or indifferent character would be more likely to be taken on at Bristol than at the Victoria Docks?—Certainly.

443. Do you think it would be at all essential to the success of a continuous scheme that the master should hold the book or certificate during the voyage?—Yes, I think he should, as he holds the certificate of his mates and engineers. Only I would suggest that a strong notice should be put outside his log-book calling attention to some circular from the Board of Trade on the subject.

444. A circular to what effect?—That the master should in the first place return the discharges of any of the men who don't join, and that he should be sure to give the certificates up to the superintendent at his home port at the end of the voyage, which masters now sometimes forget to do.

445. Is there any provision in the Act of Parliament to enforce the retention of all the continuous discharge books by the master?—I think the seamen would voluntarily give them up, as they do now.

446. Do they always give them up now?—Yes.

447. Have you never known a case where a seaman has refused to give up his discharge to the captain?—Certainly not.

448. (Mr. Howell.) The circular you suggested would be merely advisory?—Quite so.

449. (Chairman.) What would happen if a seaman refused to give his book up?—The captain would not ship him.

450. Supposing that these things were lost by the seamen during the intervals they were ashore, between

leaving one ship and joining another, what would happen then?—I can remember that when I entered the service the old continuous discharge was in force for two years, and we used to fill up the form E4, which was forwarded to the Registrar-General to be registered. I think that might be done away with if the number of the discharge was entered on the articles. If the man wanted a copy he ought to be able to give some account of the vessels he had served in, and the Registrar could refer to the records of these vessels.

451. (Mr. Clark Hall.) I suppose you don't contemplate having a central register kept by the Registrar-General of Seamen, showing the record of each man's service. A man who had deserted could omit any mention of the ship he deserted from?—That is so. I was thinking more of saving the work these continuous discharges would involve in the office.

452. In Bombay they keep a central register?—Yes.

453. (Mr. Howell.) I gather that you are in favour of trying a system of continuous discharges?—Yes.

454. And you see nothing impracticable in it?—Not at all.

455. And you don't think it would add very materially to the work of your office?—Not of mine.

456. You mean, because the clerical work is done for you on board the ships?—Yes, but if there is to be a record kept of the endorsements and of discharges, which must be done in the office, then it would seriously increase the work.

457. (Chairman.) A copy for the purposes of duplication afterwards if the seaman loses the certificate?—Yes, we should have to do that.

458. (Mr. Clark Hall.) Do you propose to keep a record of the man's service in your office?—No, I do not.

459. Would you propose to enter up a man's number upon the agreement at the time he was engaged, or would you wait till the time of discharge?—The time of engagement.

(Chairman.) Thank you for your evidence.

Mr. J. T.  
Rees.

Mr. J. T. Rees, called; and Examined.

460. (Chairman.) You are the superintendent of the mercantile marine office at North Shields?—I am.

461. And consequently you have had a great deal to do with the discharge of seamen?—That is so.

462. Under the present system of single discharges, when a seaman obtains a bad discharge, he often tears it up and destroys it, sometimes actually in the office, does he not?—He does.

463. Consequently when he next tries to obtain a ship he produces an old discharge?—That is so.

464. The present system is, therefore, unsatisfactory in that respect?—It is.

465. I suppose you are of opinion that it would be advantageous both for good seamen and also for the owners if some continuous record, which the men could not destroy, was approved by the Board of Trade?—Yes, it would be an advantage in several ways.

466. It would be an advantage in mitigating the evil to which I have just referred?—Yes. One of the advantages would be that a continuous discharge would prove a man's title to his rating. At the present time there is often a difficulty to prove his title to his rating. He may sail as an A.B., but under the Act he is not entitled to that rating unless he has been four years at sea.

467. But you cannot prevent a master taking a man under any rating which the seaman chooses to assume?—True, but the continuous discharge would prove his rating, and that would be an advantage to the seaman.

468. How would it prove his rating?—His service would be written on the continuous discharge.

469. That is only a record of his service, and it does not follow that he is what he says he is. A man may go to sea as an A.B. without four years' service; the master takes him as an A.B., and discharges him as such, and he would appear in the discharge certificate as such?—He would, but it is an advantage to a seaman to be able to prove his four years' service.

470. After he could show four years' service he would undoubtedly be entitled to the A.B. rating?—Yes, the certificate would prove his title, and, moreover, it would

prove his sea service at a glance for the Royal Naval Reserve. Frequently we have applications from men, and cannot make out their time, as they cannot remember all their engagements. At the same time the continuous certificate might be a disadvantage to the sailor in the event of his losing it, as it would be more difficult to replace.

471. I suppose that is merely a matter of record keeping if there was a sufficiently large staff either at a Registrar-General's office in London or at the local mercantile marine office?—In making an application for renewal the seaman has to state to the Registrar-General the dates of his service and the ships' names. The difficulty might be after four years' service to go back upon all these details and prove them.

472. If he can give the Registrar-General the name of the ship he served in, or the ships he served in, during a particular year, he can obtain a copy of the certificate?—The voyages are often short and quickly over. During four years a man may have done nearly forty or fifty voyages, and it is difficult, if he has lost his continuous discharge, to go back upon all that.

473. Difficult in what way?—Difficult for him to remember it?—Yes.

474. Still, if he performed so large a number of services in one year, say, thirty voyages in one year, it would not make much difference to him if in a copy of his certificates two of them were left out. If, through a slip in the man's memory, or in book-keeping, particulars were only given of twenty-eight voyages, instead of thirty, and there was a good character for each, nobody would criticise or make much difficulty if it was found that he had really served twenty-nine or thirty times. Is not that really a detail of book-keeping?—Yes, it could be got over.

475. You don't see any insuperable difficulty in giving a man a copy of his last discharge?—Not at the present time.

476. But under the continuous discharge system?—I should think Mr. Clark Hall could say better than I could whether there would be any difficulty in doing that.

477. You seemed to assume that there would be some

difficulty, but if it be taken for granted that we can have an ample staff to do these things, don't you think it could be done?—It is quite possible the difficulty could be got over.

478. On the whole, are you in favour of the adoption of a system of continuous discharges?—Yes, I am quite in favour of it; I believe it would be an advantage.

479. Have you thought about the form in which you would like to see it carried out?—I have not.

480. In the present discharge form there are discs at the bottom of the paper in which to record the character of the seamen. Would you like to see the record of his character placed on the discharge form if continuous certificates were adopted?—Certainly.

481. Would you make that compulsory?—It is not compulsory now. I think I should allow the sailor the option of saying whether he would or would not have his character upon it.

482. That is so now?—Yes.

483. You would carry out the present policy?—Yes.

484. You would not think it a good thing, even if we could pass an Act to do it, to force every sailor to have on his discharge a record of his character and conduct?—No.

485. Why not?—Because it is frequently the case that a man may be in a ship for a period of twelve months, and may have six voyages. He may have a good character for five out of the six, but in the sixth voyage he may not have got along so well with somebody on board, or may have got across the master, and the master may have given him a bad discharge.

486. Do you mean to imply that the master may have given him a bad discharge for rather a petty reason?—Bad discharges are sometimes given for petty reasons.

487. Personal friction or something of that kind?—Yes. The master may on the sixth voyage give him a discharge which practically cancels the good characters he has got during previous voyages in the same vessel.

488. Would that cancel the good discharges?—If the sailor had the option, and knew he was likely to get a bad discharge, he might say, "I don't want my character entered upon my continuous certificate." The next master to whom he applied, seeing the blank, would ask what it meant, and the sailor might reply, "I did not get along with the master that time, and I told him not to put down my character." This would leave the seaman the opportunity of an explanation.

489. That might not be the true explanation?—Quite so.

490. Would not that be the obvious explanation that any bad sailor might offer?—All the same, I should be disposed to give the sailor the option.

491. You are now speaking from the sailor's point of view?—Yes.

492. Now, look at the matter from the owner's or master's point of view. Has not the owner every right to say: "Before I employ a man on my ship I want to know what character is given him by other masters who have been over him"?—That is not done at the present time. All that masters ask for is the last discharge.

493. They have the right to ask for all the discharges?—Yes, if a man had twenty-eight good discharges the master would not put him down as a bad man for one indifferent character.

494. Supposing in the last discharge he had had no character at all?—If the man had a good many in front, and all "V. G.", I don't think that man would suffer in consequence.

495. I understood you maintained that a bad record might damn a man's character and make it difficult for him to get a ship. You may remember saying that you would allow the present system of option to continue, because if a man got a bad discharge for a petty reason it would make it difficult for him to get a ship?—That is so.

496. But he may tear up his last discharge?—Sometimes it is done.

497. It is within his option to do so?—Yes.

498. Under a continuous discharge system he might not be able to do this without it being apparent that he had torn up the character. I understood you thought that if he produced his discharge with a bad character upon it, that would make it difficult for him to get a ship, and that you thought it would be undesirable to put that power into the hands of the masters?—I did not quite intend to say that.

499. Then let us be quite clear about it. Why do you think it would be better to follow the present policy of giving the seamen an option?—Because at present it is not compulsory, and I think it would be better for him to be compelled to have his character inserted in a continuous discharge. I would leave that to his own option and explanation.

500. Why "better for him"?—Because if it is left unmarked there is nothing actually against him.

501. By "better for him" you mean easier for him to get a ship?—Yes. The master would be more likely to accept a discharge where nothing was filled in about character than one where there was a distinct record against a man.

502. In fact, it would be easier for him to obtain a ship and find a master who would not inquire into all the circumstances of his previous record?—Quite so.

503. That is from the sailor's point of view. Now, looking at it from the owner's point of view, is not the owner justified in saying: "I don't wish my master to be deceived in that way; I want him to have the true facts of the case with regard to every seaman he is asked to employ"?—Yes.

504. If you are engaging a cook, why should you be prevented from obtaining full information as regards the conduct of that cook in her last place?—I quite agree with you.

505. Then why is the case of the seaman different from that of the cook?—If I were a master I should be particular about the character, and if there were blanks in the certificate I should require to have them satisfactorily explained.

506. But if you leave it to the option of the seaman to explain them in his own fashion, how can you know if the information is satisfactory?—There would be no proof that what he is stating is correct. It would be left to the judgment of the master whether he accepted the explanation or not. The master would be justified in saying: "I won't take you."

507. Is the owner not entitled to say: "Why should my skipper be placed in the position of deciding when there is no evidence? If the man's statement is true it ought to be recorded." If he has a bad discharge ought it to be left to the seaman to say that although he was really a capital sailor, he and the master fell out? Is not that rather an unsatisfactory way of leaving it?—There would be no other way but to make it compulsory.

508. Do you think the compulsory method would be very unpopular among sailors?—I don't think it would, because the men of bad character are the exception and not the rule, by any means.

509. Do you think that the great proportion of the men have good characters?—Yes, a very large proportion. We may be paying off men for weeks together and not have a single bad discharge, all being "V. G."

510. Do you always take it for granted, when a seaman gets a "V. G." certificate, that it is quite certain he is a "V. G." man?—That is another thing; I would not say that at all.

511. When you say that the great majority have good characters do you mean that the great majority of the certificates are "V. G."?—Yes.

512. You can only judge by what the masters report?—Yes.

513. Still, you have a suspicion that they are often lax in that particular?—Sometimes very lax. Some captains may have disagreeable men all the voyage, but when they are done with them they will give them a good character for the purpose of parting friends.

514. It is easier to part friends with a "V. G." character than to continue the row by giving a bad character?—Yes.

515. Then you would retain the same procedure by giving the seaman the option of having a character discharge or not. Would you give him the option of having it upon the actual service discharge or upon a separate sheet. What I mean is this: under Section 129 of the Merchant Shipping Act the seaman has the option of having a copy of what is entered in the log book about his conduct on a separate sheet or form. I believe it is not customary to do that?—It is not the custom.

516. You either give him his character record on the discs or not at all. The fact remains that he is empowered by the Act to ask for it on a separate form. Would you under a continuous discharge system be in favour of allowing him to receive that record of character on a separate form, or would you, as is now done, have it

Mr. J. T.  
Rees.

16 May 1893.

Mr. J. T.  
Rees.

16 May 1899.

entered upon the service discharge?—I assume that it is not proposed to give him a second discharge over and above his continuous discharge.

517. You propose to make the discharge a record of service. The character would either have to be entered on that, as it is now, either on the back or front, or given to the sailors upon a separate form. Which do you think would be the best?—The character should be on the face of the form.

518. Or on the back of it?—I think it is an advantage to have it on the face of the certificate, but that is a matter of detail; it should be on the form.

519. Why should you not carry out the Act and give it to him on a separate sheet?—If he wants a copy of the whole entry in the log book it might be necessary to give it to him on a separate sheet.

520. Do you see any objection to a plan by which there should be two continuous books, the first merely showing a record of service, and the second a record of character, their numbers corresponding so as to show the relation of the character to the voyage; and then a master, before signing on a crew, could ask to see any of their character books so as to see what their record was for any particular voyage?—I don't think it would be well to have many books, the simpler the system is the better. All that has to be said for or against a man ought to be entered on one book. Sailors are unfortunately people who have great difficulty in preserving anything belonging to them; you cannot introduce anything too simple for the sailors; and I should say that the continuous discharge form should contain all that is necessary. The exception would be where a man required a copy of the whole of the master's entry from the log book. That could be given to him on a separate form if necessary. There might be some small form prepared bearing an official heading to meet such cases as that, but I never saw one yet. I have been twenty-seven years under the Board of Trade and I have never known a single instance in which a sailor has asked for a copy of the report from the log. It is very unlikely to be asked for.

521. They don't know that they either have the option of taking a character at all or that they can refuse to have these discs filled up?—I think they are schooled and educated now by those who are able to tell them if they do not get what they are entitled to.

522. At the same time they don't ask for it?—No.

523. (Mr. Howell.) I think the same difficulty occurred to me as Lord Dudley, namely, a slight inconsistency in your statements. First you said that a system of continuous discharge certificates would put a seaman at the mercy of a tyrannical master, and enable him to spoil a sailor's whole record by one bad entry; then you said that the whole of a man's service and character should be on one document. Of course, the seaman has the option now of having his character on a separate sheet, and I think you are in favour of letting him still have that option?—I am.

524. Supposing we followed the plan of some countries, such as Germany and Sweden, of letting the man, if he chooses to, have his character on a separate sheet, leaving the back of the continuous discharge perfectly blank unless he chooses to have his character endorsed there; do you see any objection to that plan which would leave the master the power of calling upon the seaman for his character in addition to the record of service?—I have the same objection to that as to introducing two books. I think the utmost simplicity is necessary.

525. Then your feeling that the whole character and certificate of service should be in one document is stronger than your feeling that a continuous discharge might be spoiled by one bad character?—Yes, I think it should be left entirely to the discretion of the seaman, but if his "V. G." is put down in every case and then there is a blank, the man should have an opportunity of explanation.

526. It would require legislation to authorise a continuous certificate of that kind?—Probably.

527. Yet you think it should bear a complete record of the man's service, qualifications, &c.?—Yes.

528. You do not think there is anything impracticable in that?—I do not.

529. Do you think it would cast much increased duty on your office if that system were introduced?—I don't anticipate that there would be very much; I don't know what is proposed in the matter of the master taking these at the time of the engagement.

530. You don't think that there would be, so far as you can see, any material increase in your work?—Not very

material, but I may remark that masters of vessels when they are going to pay off send us notice, and we prepare the discharges, which is a great economy of time.

531. Is that done in most of the cases?—Yes, under the present system.

532. I suppose very few have them filled up on board?—Never with us. It is all done by the clerical staff. The articles are sent to us and we complete the discharges, and it is important to know when, under the proposed continuous discharges, these particulars would come to our hands. They might not come into our hands until the men were at the counter waiting to be paid off. If the entry had then to be made, and the references made to the log book, that would lead to delay. If masters, when they send us notice that they are going to pay off, would at the same time send us the certificates and papers, there would be a great saving of time, but that is a matter of detail. I don't think it would entail very much extra work.

533. Are you at all acquainted with the previous attempt to introduce a system of continuous discharges?—I have had no experience of them.

534. I understand you to say you are on principle in favour of introducing a system of continuous discharges, and that you see no insuperable difficulties in the way of doing it, and don't think that the work of your office would be very materially increased?—That is so.

535. If any system of continuous discharges is introduced its success must of course depend very largely on the support we obtain from masters and owners in carrying it out, by giving a preference to seamen who have got continuous discharges?—That is so.

536. (Capt. Chalmers.) With regard to the difficulty which you might experience in getting the books promptly forwarded, of course you are aware that when a master or owner gives notice of discharge you can demand twenty-four hours' notice?—We might demand it under the Act, but that could not be carried out in our port. The Tyne is largely used as a bunkering port, and vessels are in the port about six hours, and under the "coal loading port" clause often change their crews.

537. But would not it be a remedy if you could say to a captain that if he forwards the continuous discharge books with the articles, you will take his case in two or three hours, whereas, if he does not, you will demand twenty-four hours' notice? Would not that get the masters into the way of collecting the books before the men went ashore and forwarding them to you with the articles?—We have twelve miles of river on the Tyne, and the master sends a seaman or the pilot or any river man to say when he will pay off, but we have no means of sending back a message to him on the river. If it were understood by masters that in giving notice of discharge the certificates should be forwarded along with the log and articles, that would expedite the work. It would be in the captain's interest to do so, and I believe that, generally speaking, he would do so.

538. You think that a circular issued to the masters or put on the official log-book drawing their attention to that point might serve the purpose?—Quite so.

539. You see no difficulty, if the masters co-operate, in making the men, when they come to sign on, produce their book of continuous discharge, and in making at that time the entry of engagement in these books?—I don't think there would be any difficulty about that. They produce them now, and would produce them then.

540. As a rule, they hand them over to the master, do they not?—Not in all cases. In fact, not in the majority of cases on the Tyne. The rule now prevailing is for the master to give the man his discharge back after the agreement is signed, but the masters sometimes lose them or humbug the men. Indeed, the men sometimes put the masters into court for having refused to return their papers.

541. Don't you think it would be necessary if this continuous discharge system were put in force that we should instruct the masters to take possession of the book whenever it is produced?—I think that ought to be done. It would facilitate the discharge.

542. And also in case of men who fail to join, or who desert, when the master sends back the Eng. 2 he should also send back the man's book?—He ought to.

543. Do you get the discharges now?—Not until the end of the voyage. They are put into cases alphabetically arranged in our office, and we deal them out as applications are made for them, which is pretty frequent in the case of local men. We find this more convenient than sending them up to the Registrar-General.

544. If books of continuous discharges were used would you recommend that such books be numbered?—Yes, I suppose that would be useful.

545. That number would be entered on the Articles?—Yes.

546. If that were the case and a central register were kept by the Registrar-General, would not that enable you to do away with your book containing the record of engagements?—The numbers would trace the men, but the engagement book is very useful, and I don't know very well that we could afford to let that go.

547. For your own purposes you find it useful?—Yes.

548. (*Mr. Howell.*) Useful locally?—Yes, because without it, when we parted with the agreements, we should be able to answer nothing, and we have many inquiries.

549. (*Capt. Chalmers.*) That would throw all the work on the central register?—I think it would be necessary nevertheless to continue the engagement book.

550. At present when men come to be discharged, do any proportion of them know that they have an option as to the filling in of the discs?—I could not possibly answer that question.

551. (*Mr. Clark Hall.*) Have you ever had a man ask for a separate report of his character?—I think not.

552. (*Capt. Chalmers.*) The superintendents have never informed the men of the option?—They, I believe, have never done so.

553. Do you fill in the discs before the man comes for his money?—We do.

554. The seamen never have any option presented to them?—It has never been put to them so far as I know.

555. If the continuous discharge were simply made a record of service, with a blank back, and the seaman knew that he could have the report of character endorsed upon it by means of a rubber stamp, don't you think that would be a useful system?—Yes.

556. Suppose a man consistently said that he was not going to have the back of his certificate stamped with records of conduct, and that he wanted to leave the space blank—would it operate against the man getting a ship if the document bore no character at all?—I should think so.

557. When the master is faced with that situation I suppose his only remedy is to look down the record of service. Don't you think if he found a fairly continuous record of service, with very few breaks and no desertions, that that would be a pretty good indication of a seaman's character?—Of course, the master exercises his discretion, and he may come to a conclusion upon that basis.

Mr. A. SMITH, called; and Examined.

569. (*Mr. Howell.*) Will you please tell the Committee shortly what your service under the Board of Trade has been?—I have been twenty years in the service, all at Dundee—the last eight as superintendent.

570. I think you know that the question before this Committee is whether the present system of certificates of discharge should be replaced by a system of continuous certificates?—Yes.

571. Supposing the use of a continuous system were introduced, would that involve much more time and labour on the part of your staff?—I am inclined to think it would simplify the clerical work.

572. Why?—Because the seaman's name and age and place of birth, etc., would be recorded once for all; if the system were introduced in such a way that half the work could be done on engagement, and half on discharge, that would simplify and lessen the labour.

573. What is the practice with regard to discharges at your port? Do the owners or masters send up the forms from the ship already filled in?—They are all filled in at our office, by our own staff.

574. And now let me interrogate you upon the subject of giving characters upon certificates. You know, of course, that under section 129 the seaman really has the option whether he will have his character endorsed on the back of his discharge certificate, or upon a separate document, or not at all? Have you ever known a seaman ask for a copy of it upon a separate document?—No, I cannot say I have.

558. But would not that indicate a fairly good character?—Yes, it would.

559. Supposing that went back for eighteen months or two years, and it was found that the man had never deserted?—When a man's certificate of discharge is examined, it is not looked at with an idea of finding out whether there are intervals of idleness. Masters don't go into these particulars much.

560. Not under the present system; but when a master is driven to that, and he sees no record of character, if he uses his common sense he will say, "The only indication I can have whether this man is a good fellow is by inspecting his record of service, and it will show whether the man has been idle or industrious"?—Yes, but nothing more.

561. It will also show that the man does not desert?—It may show that if the master gives himself the trouble to compare all the different dates and so forth, which I am sure he never will do.

562. (*Mr. Clark Hall.*) Would a master prefer a seaman with "V. G." on his certificate to one with a blank as to character?—He would prefer the "V. G."

563. (*Capt. Chalmers.*) The master might place the same value on the "V. G." as you do, and think that it is given in a very lax way sometimes, but what if he finds that a man's service was not very good, and that there were large breaks in his record?—A seaman could not have a continuous discharge if there were many intervals on shore. He would have to explain them.

564. The desertions would I suppose be apparent?—The man might be left in hospital or discharged abroad, which might be omitted from his discharge.

565. (*Mr. Clark Hall.*) I suppose masters, like seamen, have their peculiarities, and that some always give "V. G.," whilst others seldom give more than "G."?—I can remember one master who declined to give any other character than "G." to the whole of his crew.

566. At some ports I understand that to be not uncommon? Do you think that all should be limited to "G.," as it tells against a man's character when he only gets a "G.," whilst other men are getting "V. G."?—I think there is a little confusion at the present time in some ports between the "V. G." and the "G." If a man's character is good, the "G." ought to answer the purpose. I do not know that it is of much advantage to mark the degree of goodness. The certificate should be marked either good or declined.

567. (*Capt. Chalmers.*) If a system of continuous discharges were introduced would you favour it being extended to firemen, stewards, and cooks, and everybody, as well as the deck hands?—Yes, to the whole of the crew.

568. Regardless of rating?—Yes, regardless of rating.

Mr. J. T.  
Rees.

16 May 1899.

Mr. A. Smith.

575. Suppose one asked you for a separate form of character, what would you do?—We have no form for the purpose.

576. You have no doubt many difficulties to contend with, and probably that is one; what would you do?—The seaman could have the copy in manuscript.

577. But you have never had such an application?—No.

578. The seamen probably do not know that they have that option?—Quite so.

579. I suppose you have not had any experience of previous attempts to establish continuous discharges?—No, I have not.

580. Do you agree that the system of having a continuous record would be a good one?—Yes, if in book form.

581. Do you see any objection to a seaman having his character on a separate form if he wants it?—I see none.

582. You know that is the custom in Germany?—Yes.

583. Is it more usual for a master to give a bad discharge for a trivial fault, or for a seaman to get a "V. G." one, when perhaps he does not fully deserve it?—I think the latter is the more common experience.

584. The masters are more inclined to forgive the men than to be hard on them?—We have heard of bad cases where the men have nevertheless got a "V. G.," perhaps because the master felt satisfied that the voyage was over, and that he was parting with the man.

*Mr. A. Smith.* 585. Have you had much experience of masters giving "G." instead of "V. G."?—I think the general practice  
16 May 1899. all round is to give "V. G."

586. Do you see any advantage in having "V. G." as well as "G."?—It gives an opportunity to a master to be a little more explicit, or to give more emphasis to the character, one way or the other.

587. Does not the distinction between "V. G." and "G." depend often upon the idiosyncrasies of the master rather than on the character of the seaman, because we have heard of some masters who only give the "G."?—The value of these letters to a seaman are different from what would appear to the general public. Sailors regard "G." as a bad discharge.

588. They regard the "G." as meaning bad?—Yes, and "decline to report" is absolute condemnation.

589. I gather your opinion to be that on principle you are in favour of introducing a system of continuous discharges, and that you see no insuperable difficulties in administering such a system?—That is so.

590. (*Capt. Chalmers.*) If such a system were introduced, I suppose you would not be in favour of it being made permissive?—No.

591. You would favour one exclusive form for the discharge of seamen?—Yes, and I would favour the character being on the back.

592. You don't think that the discharge form should be a record of service alone?—No, I think the character should be given with it.

593. Why should you confound character with service? If a man wants a record of his service, pure and simple, is there any advantage in disfiguring it by putting his character upon it?—The advantage to my mind would be this—that I fancy the seaman would prefer such a form. He would prefer a record of his service and a record of his character on one document.

594. Do you think it would be a good system in that case if it was still left open to him to have the record of character endorsed, if he desired it, upon the back of the record of service by means of india-rubber stamps, but that otherwise the back of the certificate should be left blank, without lines or rulings, to call attention to the absence of a character?—What I think the seaman would take a pride in would be a series of good records, with the option of omitting a bad one.

595. Is it within your knowledge that a seaman ever learns, before it is handed to him, what character he is going to get?—Sometimes he may have an idea, but that is all.

596. Has the superintendent or deputy superintendent never considered it his duty before handing the seamen their discharges to ask if they wish the discs filled in?—I don't think it has been the practice to put that before them.

597. If the record of service was on the face of the leaf or page, and the back was left blank for an india-rubber impression of the character when desired, would that not meet the case?—I think so.

598. Would you rather have that, or have a space ruled, with headings for record of character, conduct, and ability?—I have brought with me a book, a kind of model, embodying my ideas. (*Copy of book handed in. See Appendix.*) I think it should be made the practice to ask a seaman whether he wishes his character recorded.

599. You would give the sailor the option as to what part of the record the character appeared on?—The record is not much valued without the character, except in the case of a man who is coming up for examination.

600. (*Mr. Howell.*) But the seaman has the option now of putting the character on his discharge certificate or having it separately. You would not destroy that option, would you?—If a seaman had a continuous record that was good he would be much against allowing a "G." or a "D." to appear on it. It might be assumed that he would not object to a "V. G." appearing, but if that did

not describe his character, he should be consulted whether he wishes the record to appear. If a seaman gets a "G." at present he can withdraw that discharge or tear it up.

601. If a seaman with a good record chanced to get into the hands of a tyrannical master, with whom he could not agree, you think he should be allowed to elect not to have a character record for that voyage?—Yes.

602. Would not the absence of a character operate in the same way as a "D."?—No, he could not complain of it.

603. That would show the virtue of the form of endorsement by means of india-rubber stamps?—Yes.

604. You think that the suggested system would lessen clerical labour?—Yes, if we could carry the masters along with us, and get them to bring us the books. It would be to their own advantage.

605. A circular or notice might be put in the official log drawing the attention of masters to the system, and requesting that if they do not hold the books, they should collect them before the men leave the ship, and send them to the Shipping Office?—I don't think that system would work so well as the masters taking charge of the books, for the seamen might leave them at home in some cases.

606. At the time of engagement, it might by instruction be made imperative on the masters to bring the books?—The only objection they might have would be that when they have perhaps thirty men it would mean a pretty cumbrous parcel.

607. But ships are big nowadays?—There would be the official log-book, the articles, account of wages, the discharges, etc. In some of the Baltic ports, Russian ship brokers supply masters with portfolios.

608. It would be very simple for shipowners to supply the masters with a tin box to hold all these papers?—Yes.

609. (*Mr. Clark Hall.*) Would there not be some loss of time, if the men kept the books, through their fumbling about at the time of discharge in trying to get them?—They would take a pride in them if the records were good. And as the record would include engagements as well as discharges, I think it would be better if it were called "Certificate of Service," rather than continuous certificates of discharge. I think it would tend to popularise the system.

610. (*Capt. Chalmers.*) When the system was in full operation, the seaman would take a pride in the books?—Yes, I think so.

611. Would you favour the abolition of the "V. G.," so as to have simply the "G." or the "D."?—I don't think that could be broken down now. It has been too long in operation. I think there would be opposition to such a scheme.

612. (*Mr. Howell.*) You don't think that any system of continuous discharges should be retrospective in its operation?—No.

613. What would be your idea of a reasonable period of notice before introducing such a system—a year, or a year and a-half?—I don't think long notice would be necessary.

614. How long would you suggest, to bring the system into force?—Perhaps six months.

615. Is there anything else you have in your mind you would like to mention?—There is the discharge of coasting vessels.

(*Mr. Howell.*) Discharges are only required now in the case of foreign-going ships.

616. (*Capt. Chalmers.*) Would you favour the coasting vessels having a continuous discharge?—Discharges are given now by their masters, but not in a continuous form.

617. (*Mr. Howell.*) Do you mean that to a considerable extent they have adopted in the coasting trade our system for foreign-going ships?—Not quite the same.

618. (*Mr. Clark Hall.*) It does not contain a report of character?—No, it does not.

## THIRD DAY.

Tuesday, 20th June, 1899.

PRESENT :

The Right Hon. The Earl of DUDLEY (*Chairman*).

Captain A. J. G. CHALMERS.

Mr. W. J. HOWELL.

Mr. J. CLARK HALL.

Mr. C. HIPWOOD, *Secretary*.

Mr. ECKELL, called; and Examined.

Mr. Eckell.

618 (*Chairman*.) You are, I think, the acting Vice-Consul in the Swedish and Norwegian Consulate General in London?—Yes.

620. And you have been kind enough to come in order to give us your experience of the system which is at present in force in Sweden with regard to Certificates of Discharge?—Yes.

621. Do you know what our present system is?—I do.

622. The Swedish system is rather different is it not? You have a form of continuous discharge?—We have a book for such discharges both in Sweden and in Norway.

623. As a record of the service of the seamen?—Yes, to some extent.

624. Then, do you in another book or paper give the seaman his character?—No, there is no official form for the character.

625. Is there nothing on which his character is recorded?—Nothing official. I have a copy of the Swedish Discharge Book here.

626. What is that book called?—The Seaman's Book. It contains columns for the name and other particulars of the seaman as well as his time of service and rating.

627. The record of service shows each voyage?—Yes.

628. Can you tell us why there is no record of character?—I think it was from the beginning meant to be only a record of service at sea. These books are issued in connection with the so-called Seamen's Houses which they have in Sweden. The Seamen's Houses in some respects resemble the Mercantile Marine Offices in England. It was established many years ago. The institution is now rather antiquated, I have been told.

629. Are they under Government?—Yes. Seamen's Houses were established in order to forward the interests of shipping and of seamen. The seamen are, according to the rules, entitled to a pension when they retire from the service, either from old age or serious illness, or from accident or other calamities. I suppose it is in that connection that these books were first given to the seamen. They have to be inscribed at the Seamen's House, Sailors have a right to be inscribed there. I cannot find that there is any absolute obligation upon them, but practically it has become universal. It may be said that every seaman is so inscribed. I believe these books were not meant originally to be discharges in the ordinary sense, although they serve practically the same purpose.

630. Am I right in understanding that this is what you mean, namely, that a seaman can obtain a pension in Sweden when he retires from old age, or when he is forced to leave the service owing to any serious accident?—Yes, according to the rules in force.

631. That is, so long as he shows certain sea service?—Yes.

632. And his mode of obtaining that service is first of all to become registered or inscribed at one of these Seamen's Houses?—Yes.

633. And when he is so inscribed, he obtains a book such as you have produced?—Yes. And out of his wages he has to pay a certain small amount towards the Seamen's House. When he is paid off the amount to be so paid is stated in this book, and the Captain has to account for that to the Seamen's House authorities.

634. At the end of his service does he show that book to the Seamen's House at which he is inscribed, and do the authorities then award him a pension upon such service as he can prove?—Yes, according to the regulations.

635. And although it is not necessary for every seaman to take a book, unless he chooses to make himself eligible for a pension, most of them, as a matter of fact, do so?—Practically they all do so.

636. When a seaman is paid off in Sweden what would happen if he did not produce a book of the sort you have shown—I mean is there any other method in force by which he could be paid off?—Oh, yes. There is no absolute necessity for producing the book. When sailors are discharged they have to be paid off.

637. Is there any other form apart from that book?—No official form.

638. As long as the sailor is paid his wages, and no disputes arise, it does not very much matter, does it, whether he is given a certificate of discharge in the book form or whether he is not?—No.

639. Really it is purely a voluntary thing altogether?—The fact is that every seaman has one of these discharges.

640. At the same time a man could be paid off quite easily without one of these books?—Yes, but some masters will not ship them without a book, whereas another will ship anyone whom he thinks a good man, if the man can prove that he is not a deserter.

641. If a seaman loses his book in Sweden, is there any means by which he can get another copy of it?—Yes, I daresay he would be able to get another copy. I may mention that the pension to which a man is entitled on retiring from the service is forfeited if he deserts.

642. Does the Captain of the vessel hold these books during the voyage?—He does, and if a seaman deserts his book is sent into the Shipping House.

643. So that the man would lose his book?—Yes.

644. As the object of the book is to make a man eligible for a pension on the ground of service, it was not thought necessary to include in it a record of his character?—No, apparently not, but it is so long since these books were first used that I could not say exactly with what intentions they were originally introduced.

645. Is there any means by which a Swedish Captain can find out what sort of character his seamen have?—Yes, because it is common to give certificates or testimonials to the seamen. Printed forms for the purpose can be obtained at the Seamen's House. I have seen many of them, and I think they are provided at most Seamen's Houses. There is no obligation upon the Captain to give such a certificate, but it is extensively given. The certificate states whether the seaman is sober and obedient, and what kind of work he can do best.

646. The Captain gives that or not as he likes?—Yes.

647. As a matter of fact, do most sailors when they join a ship produce their book of discharges and also the unofficial copy of the certificate of character?—Yes. I should not like to say that is always done, but it is very largely done.

20 June 1899.

*Mr. Eckell.* 648. Has there ever been any suggestion or demand that the record or character should be made official, and should be included in the book of discharges?—Not to my knowledge.

649. Neither from the masters or the seamen?—No.

650. And the record of character was not left out of the book because it was supposed to be unpopular with the seamen?—No. I don't think there was any such reason.

651. One other point that strikes me is this: You said that these books contain a record of the service, and also of the rating. Now how do you manage in Sweden about the rating? How do you prevent a man going to sea under a rating which is not really his own?—It is not possible to prevent that. We have no rules as to that.

652. If a seaman chooses to go to sea as an A.B. and the master chooses to take him as an A.B., you cannot prevent that?—No, but the captain has a right, as in England, to reduce a sailor's wages if he finds the man is not capable of doing the work he is engaged for.

653. Therefore the rating security in that book is not greater than the security we have in this country?—No.

654. The book simply tells what the man calls himself?—Yes.

655. Can you tell us anything about the practice in Norway?—In Norway these discharge books or papers are filled up with special reference to the Naval Service. Every seaman is liable to be called upon to serve in the Navy; when a man ships for the first time he gets a paper called a patent, before he is actually entered on the lists as a naval man. It remains optional some time for him whether he will leave the sea and go instead into other service ashore; but if the man has come to an age when he must decide what to do, and if he decides to follow a seaman's employment he gets a copy of the book. That is after he has either served in the Navy or become liable to serve, because the naval authorities do not want the services of everyone. That is to some extent a reason for giving these books, and no doubt another reason is the necessity of having proof of service if the man wants to be appointed, for instance, as first or second mate on board a vessel. He has in that case not only to pass an examination, but also to show a certain period of service on board ship; therefore we have these books. You will find that in the books there is nothing about the capacity of the seaman.

656. In neither the one document nor in the other?—No.

657. What does the paper patent contain?—It gives a description of the man. It is issued either for one voyage or for a certain limit of time. It shows that the man shipped on a certain date from one port to another port, and it contains the signature of the officer as well as the date of discharge. The time of service is provided for in another column, and there is a final column for notes or comments.

658. Does the seaman get a discharge book later on?—Yes.

659. (*Mr. Howell.*) What is that printed on the back of the book?—It is a copy of certain regulations as to the conditions upon which a new book can be got, and of the fines which may be imposed for losing the book.

660. (*Mr. Clark Hall.*) Does the master keep the book throughout the voyage?—Yes.

661. What does the book contain?—Practically the same as the paper patent.

662. Does he get the book after his first voyage or two?—After his name has been inscribed as available for naval service.

663. (*Chairman.*) Would he copy into that book his record of previous voyages from his patent?—No; but at the beginning of the book there would be a memorandum as to the period of service covered by the patent.

664. (*Mr. Howell.*) The sailor becomes a member of the Royal Naval Reserve when he is 22?—Yes.

665. (*Captain Chalmers.*) Then the patent expires automatically when a man is 22?—Yes.

666. (*Chairman.*) Then he does not get a book till he is 22?—Quite so.

667. (*Mr. Howell.*) Does he not get the book after he has joined the Naval Reserve?—Yes.

668. (*Chairman.*) In these discharges there is no record of character?—No record of capacity or character.

669. (*Captain Chalmers.*) Nor any rating?—No. The

discharge which I have in my hand belongs to a seaman who is not a Norwegian at all. He is a Dane. Every seaman shipping from a Norwegian port gets such a paper. He cannot ship in a Norwegian vessel from Norway unless he gets one of those papers.

670. (*Chairman.*) Does it not matter what age he is?—No, everyone has to get such a paper.

671. (*Mr. Clark Hall.*) If a man ships above the age of 22, does he get such a paper?—At that age I suppose he would get the book if he was on the naval roll.

672. (*Chairman.*) If an Englishman 40 years old were to ship, which would he get upon a Norwegian ship?—I suppose he would get one of those patent papers.

673. You say that the seamen are not always taken for the Navy. If a seaman were not taken for the Navy would he still have that form of discharge book given to him?—Yes.

674. Because he might be called upon to serve?—Not for that reason only; but, having such a book, he is not liable to be called upon to serve in the Army. In the Navy all available men are not called upon because the fleet is not so large as to require them all, but when a man has got his name inscribed for the Navy he cannot be drafted into the Army.

675. Men are liable for service in the Navy although they may not be taken?—Yes.

676. Do you find in Sweden that the use of these books has any effect upon the character of the seamen?—I mean do you think that the fact of having to show a record of service of this kind is a kind of guarantee that seamen will keep straight?—Yes.

677. If not a guarantee, it is at least an inducement to them to keep straight?—Yes.

678. I suppose they seldom lose their books?—Seldom, unless they desert.

679. No ordinary breach of discipline would involve the loss of the book?—No, nothing except desertion.

680. (*Mr. Clark Hall.*) If the book is lost, how do you replace it?—A new one has to be obtained from the authorities. If the seaman cannot show that it is lost through no fault of his own, he has to pay a fine for losing it.

681. Have you a central register from which a fresh copy could be given?—Yes, we have the Navy list.

682. (*Captain Chalmers.*) Do you keep an official log on Swedish vessels?—Yes.

683. But no matter what a seaman does on board a ship, even if he offends against discipline, the captain has no power at the end of the voyage to enter anything against him in his book?—There is no column for that.

684. (*Mr. Clark Hall.*) Do the Norwegians give a character similar to Swedish captains?—Yes, very similar. They tried to establish a voluntary form for the purpose at Fredrikshald, but could not keep it up. There was not sufficient agreement among the captains; but it is a very common thing for the captain in discharging a seaman to give him a note that he is a good man who can be recommended to any one requiring his services.

685. (*Captain Chalmers.*) Is there anything in the official log showing the character of the seaman at the end of the voyage?—No.

686. Is there no requirement upon the captain to enter that?—No, but if there is anything wrong he may do it. The captain may fine the seaman.

687. He does not at the end of the voyage give him a character?—Not necessarily.

688. I suppose there is a Seamen's House at each principal port in Sweden?—Yes.

689. Does the seaman choose at which Seamen's House he will register himself?—He will register and get his book at the port where he lives or where he ships.

690. If his book is lost he must apply to that Seamen's House for another copy?—Yes.

691. How does that work if he ships at different ports for different voyages?—He ships for a term, and at the end it is notified to the Seamen's House to which he belongs. They ship for a stated time, and seldom for one voyage only.

692. (*Captain Chalmers.*) Is it the custom of captains in engaging the men to ask them to produce their books?—Yes.

693. Both the unofficial character and also the discharge book?—Yes.

694. Do they always ask for the unofficial character?—The captains ought to do so, and if careful about selecting the men they would do so.

695. Is it the rule to do so?—Yes. The captain says to the seaman: "What papers can you produce?"

696. (Chairman.) If a seaman does not produce his record of character, which you say is generally given, is that fact likely to influence the master?—Yes, to a very great extent, especially if there are plenty of seamen to be had.

697. He would not take such a man?—Probably not. Most captains are very particular.

698. Do you find, as a matter of practice, that masters become rather lax about the form of certificate which they give as regards the conduct of the seamen?—I mean as it is the common practice for seamen to obtain a certificate of character, do the masters give them all pretty good discharges?—No, if they are not satisfied they refuse to give the seamen a certificate. They are not obliged to give them certificates.

699. Then you do not think that the captains scatter good characters about broadcast because it is easier to part friends?—They don't give them if the men are bad. There is no power to compel the captain to give them.

700. Then you can generally take it for granted, when a seaman gets a good character, that he really is a good man?—Yes.

701. It does not mean that he may be an inferior man, but that the master has not the strength of mind to give him a bad character?—No, the master has evidently been satisfied with him.

702. (Captain Chalmers.) Is the contribution which

seamen pay to the Seamen's House a fixed sum per month?—It is in proportion to the wages. *Mr. Eckell.*

703. And that is deducted from the wages account by the captain, who pays it over to the Seamen's House?—Yes. *20 June 1899.*

704. (Chairman.) Is there anything like that in civil life and ordinary employments in Sweden. For instance, in the case of a bricklayer or mason, would there be any deduction on account of old age pension in the same way as in the case of the seamen?—No, I don't think they have any such system.

705. Is not that the way the old age pension system is worked in Germany?—I believe that is so. There was some talk about old age pensions for other trades in Sweden, but I do not know how far the idea has advanced.

706. But you do follow the German plan with regard to your seamen?—Yes, or they follow our plan.

707. It is the same idea?—Yes.

708. (Mr. Clark Hall.) Is that partly with the view of encouraging them for naval purposes?—No.

709. (Captain Chalmers.) Does that apply in Norway as well as in Sweden?—No.

710. (Mr. Howell.) When a Swedish crew is discharged, is the master compelled to give a certificate of discharge to all his seamen?—No.

711. Is there no compulsion at all?—He has to sign his name in the book.

712. Does the same rule prevail in Norway?—The captain has nothing to write there. The entry is made by the discharging officer.

(Chairman.) We are much obliged to you for your evidence.

Capt. G. H. BARCLAY, called; and Examined.

*Capt. G. H. Barclay.*

713. (Chairman.) I understand you represent the Merchant Service Guild?—Yes.

714. You are kind enough to come to give us the opinions of that Guild with reference to the question of continuous discharges?—Yes.

715. You have brought with you some resolutions which your Guild has passed on the subject?—Yes; the resolutions are as follows:—Resolved: "That we express our gratification in that the Board of Trade are taking into consideration the advisability of instituting a system of continuous discharges for merchant seamen. The time has now come when it is urgently necessary that something should be done in order to effect an improvement in the personnel of the Merchant Service, and to enable those in command to maintain discipline on board their ships. We think that the step proposed is a very important one in the right direction, and we trust that the deliberations of the Departmental Committee will have a favourable issue." Resolved: "That, in view of a favourable decision by the Committee, we express our strong opinion that, in order to render the new system efficient, the present system must be totally abolished, and the continuous discharge system made compulsory. Each discharge should, in addition to the name and personal description of the owner, state his nationality and his character for ability, good conduct, and sobriety, the latter to be filled in by the Board of Trade officer at the end of each voyage the seaman may make."

716. Where these resolutions passed recently?—Yes, at the weekly meeting last Tuesday night. I should explain that the Merchant Service Guild is composed of masters and officers, almost all in active service. The members at present number about 4,000.

717. In active service? What about the cases of ex-masters and officers?—Few of our members have retired. Probably only two or three per cent.

718. Is it a guild of somewhat modern establishment?—Yes, the guild is now five or six years old.

719. You don't make any rule that when a member retires from work he should cease to be a member of the guild?—Not unless he enters the Navy or becomes a shipping manager or a Board of Trade official.

720. You yourself have had experience in the Merchant Service?—I have been six years in command in the Hall Line. I have been twenty-one years at sea.

721. You are not now at sea?—I am retired at present.

722. Do you find that the present system of discharges

in the Merchant Service requires alteration and amendment?—Yes, decidedly so.

723. What fault have you to find with it?—In the first place, under the present system of discharges, if you give a seaman a bad discharge he simply tears it up, and if he is drunk he may throw it at you. Then when he wants a ship he shows a previous discharge, and perhaps pretends that he has been working on shore in the interval. I have sailed with a continuous discharge system for Lascars.

724. You think that a man should be prevented, in the first place, from being able to get rid of a bad discharge, that he should be made to keep it in some way, and that a continuous form of discharge would have that effect?—Yes. I think it would tend to stop drunkenness and insubordination.

725. Would the seamen not still be disposed to tear out a bad character from a continuous form?—It might be arranged that he could not do so without detection. The Lascars sometimes burn a hole in their discharge when they have a bad character. They burn the piece out which contains the unfavourable record, and then say it had dropped in the fire or something of that kind, and they bring us the remainder to get the certificate renewed.

(Mr. Clark Hall.) I have now in my hands a sample of a discharge from which the material portion has been torn away. The man brought it to us to get a new one, but we found from the log that his character was bad, and that it was a "decline." We offered to give him a copy of that, but he said, "Oh, that is no use; you are too sharp for me."

726. (Chairman.) If a seaman had a book form of discharges, why might he not tear any bad records out?—If the pages were numbered, you could tell when there was a page missing.

727. If a continuous discharge form were brought in by the Board of Trade and made compulsory, do you think there should be only one form?—Certainly, only one.

728. You would not have the two systems going together?—Certainly not.

729. Then, with regard to the certificate, would you prefer to have it a mere certificate of service or a record of service and character?—A record of service and character and ability.

730. Would not that lead to difficulties? It would re-

*Capt. G. H.  
Barclay.*

20 June 1899.

quire legislation to begin with, for at present there is nothing to force a seaman to accept a record of conduct at all?—I could not say as to that.

731. You know that in the present form discs are provided for the record of character and ability?—Exactly.

732. But it is purely within the option of the seamen to decide whether he shall have these discs filled up or not?—I never heard that point mooted. I have always filled them in.

733. It is a fact, nevertheless, that it is purely in the option of the seaman, and that all he is required to have is the top portion filled in, recording his service?—His record of service.

734. The record of ability or character and conduct is purely voluntary, and if the seaman does not choose to have it, he need not have it?—Quite so.

735. If that was made compulsory legislation would, in the first place, be required?—Perhaps so.

736. Apart from any other consideration, don't you think that any legislation of that kind would be very difficult to carry through? I believe it would be very much opposed on the part of the seamen?—I think many would regard it as a benefit. It would only affect the worst class of seamen.

737. Would they not say that it was opening the door to all kinds of tyranny on the part of masters who might give them bad characters when they did not deserve them?—When an employer engages a servant ashore the first thing he asks for is a character from his last employment.

738. He can do that now at sea. When a sailor leaves, he can either ask for his conduct to be filled up in the discs on the discharge, or he can ask for it on a separate form, but there is practically the same system afloat as ashore. If, however, this was made compulsory, it would mean forcing every seaman to accept the record of character, which any master might choose to give him without providing any appeal, and under circumstances in which it would be very difficult to trace whether there had been tyranny and unfairness or not?—The captain is not the only man. The other members of the crew could give evidence on behalf of the aggrieved seaman if there was any dispute.

739. That may be so in very well-known cases, but is it not conceivable that a master might take a dislike to a man, and make up his mind to give him a bad character when he left, and is it not very easy to find an excuse for doing so. Even a good man may occasionally make little slips, which, if the master chooses to magnify them, might be put forward as sufficient ground for giving a bad character?—I think there is usually little fear of that. The masters more frequently err upon the side of leniency; at least, that is my experience.

740. A record of character and conduct is a tremendous weapon in the hands of the master?—It must be remembered that when we have a man on board we have to keep him for the whole voyage; if a man is troublesome ashore, you can tell him to walk out of the place, and pay him off; but when you ship a man, be he good, bad, or indifferent, you may have to keep him for eight or nine months. If there were continuous discharges it would be easy to see from the previous records whether the man was worth his money or not.

741. That is not exactly my point. Suppose you have a man who is constitutionally weak, as it is quite conceivable that a seaman may be, and not really equal to long, continuous work, might not an ill-disposed master give that man a lazy character, and might it not be very difficult to prove whether the man was really lazy or whether he was constitutionally unfit for hard work?—If he is constitutionally unfit, he is not an able-bodied seaman.

742. But is it not rather hard on a man who is constitutionally unfit, and yet does his best, and that he should be branded in a continuous discharge form as lazy, and that he should be forced to take that mark of conduct and character whether he likes it or not, and whether it is true or not?—The same thing applies ashore. If a bricklayer is bodily weak and cannot work as well as another man he is simply sacked and loses his position. If a seaman is not bodily fit he has no business to go to sea.

743. Surely a workman ashore would not, under such circumstances, be branded with an indelible brand of laziness?—I suppose he would not be employed. I may here mention that the White Star and Cunard lines have

a system of continuous discharges, and the books of each company are open to the other. They keep a joint record of the men each employ, and if a man gets a bad character in the one firm he will not be shipped by the other firm, so that practically, so far as they are concerned, the continuous discharge system is already in operation.

744. I understand your point is this, that for the sake of the general conduct of seamen, for the sake of maintaining a high standard of conduct in the Mercantile Marine, it would be advantageous for masters to be able to learn what was the opinion of other masters as to the conduct and character of a seaman during his last voyage, and that therefore the record of such conduct should be placed upon the man's discharge; but would it not meet your point if the two things were kept separately—that is, if the man had one book which contained merely a record of his sea service and another book or set of papers which contained a record of his character. Then, when a master shipped a seaman, he would first of all look at his sea service, and if that was all right he would say, "Now, what about your conduct record?" If the man was not able to show a good character from his previous employer that would no doubt weigh with the master before shipping him?—Exactly.

745. On the other hand, by that means the seaman would be saved from having on the face of his record of service a bad mark which he could not get rid of. You see under the present law, if a seaman chooses, he can have his record of conduct or character upon a separate form. Why should there not be a number of separate forms on which the character is marked, and which could be shown in conjunction with the continuous forms for sea service. In what way does that fail to meet your requirements?—The views of the Guild were that it should be in one book.

746. Somewhat similar to the Federation discharge?—Yes.

747. Perhaps they had not realised that that would require legislation?—That was not brought up at our last meeting, and the last meeting was the only one which I attended upon this subject.

748. In what respect would their views not be met by a suggestion like the one I have made?—I do not quite understand what is the object in separating the two records, because if both are asked for by the captain it would amount to the same thing in the end.

749. I don't think it would quite. It might amount to the same thing with good men, but not with bad men, would it?—Practically the same.

750. I think not, because a bad man would have the chance of showing his sea service only, and might suppress his other record; he might be able to get another chance in that way, whereas a good man would, of course, be only too glad to show both?—Would not that rather be conniving at fraud?

751. No, I don't think so. It would be giving an opportunity to a man to remedy a mistake?—So far as the present system is concerned, I never think of asking a man for his discharge; if he looks respectable and sober and smart I engage him, but I don't ask to see his discharge certificates.

752. Why not?—Simply because they are absolutely of no use. Indeed, I cannot know whether it is his own discharge that he produces or somebody else's, as there is no description of the man in it. Any man whose age is about the same, or within five or six years of his own, can allow him to use his discharge. I remember, as a boy, when I knew more intimately about the men than I do now, that very few of our men—that is, about fifteen years ago—went under their proper names; they went almost invariably under false names. I suppose they had deserted or had been guilty of insubordination or had bad discharges, and they picked up another discharge.

753. That is merely a question of identification, and could be easily got over consistently with the plan I suggest. In a form of continuous sea service record, you would naturally have a description of the man at the beginning of the book, and you might have the same thing in the record of conduct. There is no reason why there should not be some description of him put in front of what may be said about his character?—If you wish I will place that question before our Guild.

754. Do you see any material difference between having these records put on one paper or upon two?—The difference is this, that if they are in one book he cannot show one set of particulars without showing the other, whereas if they are on two he can suppress what it does not serve his purpose to show.

755. But if it were known that both existed and that one was suppressed?—The sailor would have some yarn about the inconvenient record having been blown overboard in a gale in the Channel or something of that kind. The opinion of our Guild was decidedly in favour of one book.

756. You can let the Guild know from us that, whilst we shall take their opinion into consideration, it would entail legislation to carry out their proposal. We have no power to do it at present without legislation. I suppose, if we had continuous discharges in book forms, you would suggest that the master should hold them during the voyage?—I do not know that I would insist upon that. In the case of natives, such as Lascars, we do hold them; in fact, we hold them from the time the man signs on. If you also hold them in the case of a European seaman, of course, it would give you a strong pull in inducing him to join the ship. That would tend to prevent desertion, although the book itself should be sufficient to check that.

757. But why? The book would not contain any record of his signing on, would it?—The Federation book has a column for remarks on conduct.

758. Suppose a man went to sea, keeping his book, and that he deserted; that would be a serious offence. He would go ashore, and perhaps try to do some other kind of work; but he would probably by-and-by seek to return to the sea if he found that shore work did not answer. He might get another ship and sign on, but in case of desertion the book would show no record of his having signed on?—If he deserted in a foreign port any master to whom he went would want to know how he got there.

759. There would be no record of his having signed on or of his having gone to sea?—If he had no record he would have a poor chance of getting shipped, especially if there were sufficient able seamen waiting for engagements.

760. He must get home again?—Jack has seldom money enough to pay his fare home. I think that, on the whole, the master should keep the discharge book, in order to check desertion.

761. Would that be done automatically, or would it require special regulation? I mean, would the master need to make that stipulation when the man signed on?—There would be no difficulty. When a seaman wants a berth he is always ready to leave his discharge with the captain.

762. Then it would not be a point which would need any cognizance on the part of the Board of Trade at all, but one which would be arranged between the masters and the seamen?—Yes.

763. (Mr. Howell.) I suppose the master would say, "If you don't choose to leave your book, I will not ship you"?—They are only too glad to leave it.

764. (Chairman.) Then, I suppose that if a man deserted, the master would send his book to the Registrar-General?—Exactly so.

765. I suppose that under a system like that you think there ought to be some means by which a man who has lost his book should be able to get a fresh copy of it?—Exactly. He should get it renewed. I think the Lascars pay a small fee if they need to have theirs renewed.

766. (Mr. Clark Hall.) Do you think the seamen themselves would object to a continuous discharge system?—I do not think the seamen would object—not the respectable men, anyhow—but I daresay the seamen's representatives would object. I think that if the sailors were left to themselves they would not object; but that is merely a matter of opinion.

767. If the master took the book from the seaman at the time of engagement, and produces it to the superintendent, and an entry were made of the engagement, and if the captain retained the book during the voyage, and the seaman deserted, there would remain in the book a record of his having shipped?—Exactly.

768. (Capt. Chalmers.) If you read the Merchant Shipping Act, it will be seen that the first necessity in a discharge form is that a record of service has to be kept?—Yes.

769. And the discharge form really came into vogue as a record of service only, don't you think so?—I don't remember with what object it was first brought in. That was rather before my time.

770. You quite recognise the necessity which exists under the Act that a seaman should prove his service on

account of his rating, and also to account for his time when he comes, if he does come, to pass for the rank of officer?—Yes.

771. Therefore the necessity for an official discharge would arise simply from the want of record of service?—And of conduct.

772. Why of conduct? Don't you know that in presenting yourself for examination before the Board of Trade you have to produce not your discharge only but written testimonials as well?—Yes.

773. Does not that rather go to prove that the official discharge form recognises simply the record of service?—In that case.

774. Don't you think it is far better it should remain so, and that if anything is to be added as to character it should be on a separate form, or, if the seaman wishes, he can have it at present stamped on the back of the page?—The voluntary continuous form at Liverpool has not yet been applied for. We were told so yesterday by the superintendent. It was not to be expected that it would be in demand.

775. Not as long as it was permissive; but supposing the system were made compulsory?—Then I think it should all be in one book, the service and character as well.

776. Do you recognise that that would require fresh legislation?—That is a matter with which I am not concerned. I am here simply to express the views of my Guild.

777. Do you think your Guild would be prepared to press the matter if it involved fresh legislation?—I am not instructed to say, but, as I said before, the matter could be placed before them, and I could let you know the result.

778. If you press it, are you not open to the retort, why should the State make the granting and acceptance of a character compulsory?—No doubt there is that consideration to keep in view.

779. Have you seen the continuous discharge form in Liverpool—the one which you said had not been applied for?—No, we could not get one.

780. You may take it from me that it is simply a record of service, and the back of every page is blank, so that, as the Act stands at present, if the seaman wants it endorsed, the character could be filled in. Would that not be satisfactory to you?—What we want is the one book.

781. Well, you would have the one book?—But we want the ability and conduct recorded in the book as well as the service. If a man has ability and has not good conduct he may be more troublesome than another man of inferior ability who has better conduct.

782. If you get a book showing a continuous record of service you may not want any further guide as to a man's general character or capability, and as to the desirableness of shipping him. Don't you think that a master who went carefully through a record of service extending over, say, two years could form in that way a fairly good estimate of the man's character, especially if the record was

\* The following letter was subsequently received from the Merchant Service Guild:—

The Merchant Service Guild, July 1st, 1899.

SIR,—With reference to the evidence as given before your Committee by Captain G. H. Barclay, and the opinions of the Guild which he was desired to obtain, I beg to inform you that the following resolutions have been carried, and I am directed to express the hope that they may receive favourable consideration:—

*Resolved:* That if the continuous discharge system is adopted we will, in order to avoid immediate legislation, have no objection to the filling in of the characters for conduct from the official log book being done, in the same way as at present, leaving their acceptance optional.

*Resolved:* That we are unable to approve of separate books for the discharge and character. We are satisfied that if this plan were adopted the result would shortly be that the character books would drop out of use altogether. We are strongly of opinion that to make the continuous discharge system efficient, the discharge and character, or blank, as the case may be, must be inseparable, and that otherwise it would be useless to adopt it.

I am, sir,

Your obedient servant,

(Signed) JOHN G. MOORE, Secretary.

*Capt. G. H. Barclay.* fairly unbroken?—There are times when a captain is glad to get anybody, and as regards British seamen I have sometimes been unable to get them in Cardiff.

20 June 1899.

783. Do you think that shipmasters want to be protected against themselves, because they are in such a hurry that they have not time to select the best men?—I was referring to what you said about the unbroken record. I think that as a general rule the seaman can get a ship when he wants one. The officers certainly cannot.

784. Is it not a good gauge of a seaman's character if he completes voyage after voyage, year after year, with only brief intervals ashore?—Completing a voyage in a ship proves that he has not deserted. The shortness of his spell on shore has little to do with that, for the sailor usually waits ashore as long as his money lasts.

785. However, you think that, in engaging men, the captain should have no difficulty in insisting upon the books being produced?—I don't think there would be any trouble about that.

786. Has it not been suggested that the superintendent should enter the date of engagement and then hand the book to the master?—Yes, when the seaman signed on.

787. Otherwise if the book is simply sent in without any record the careless master may give it to the seaman, and then there might be no record of the shipping?—Yes.

788-9. Do you think that if the continuous discharge system were adopted masters would decline to engage men who did not or could not produce their books on all occasions?—Possibly not. In Bombay there was a continuous discharge system, and it was a sore point with shipmasters who recognised it that other shipmasters shipped so many men who had no discharges but took the men upon the strength of their appearance, taking them because they looked like good men.

790. Don't you think the success of the system must in a great measure depend upon the shipmasters?—Yes, no doubt.

791. Do you think the influence of your various societies is sufficient with masters to give effect to an instruction that in all cases they are to decline to engage seamen who cannot produce discharge books?—I certainly think that a shipmaster would not engage a seaman without the book unless he was driven into a corner, which might mean delaying his ship, and a vessel's time is money.

792. In the case of desertions abroad, when shipping fresh hands would you also demand the book?—Certainly.

793. Then what would you advise being done with the books in the case of desertions abroad?—If you are asking me for my personal opinion, I should say it should be returned to the shipping master at home.

794. You would favour that rather than it being handed to the Consul?—Or to the Consul; it would not matter. The vessel might be lost on the way home.

795. Then you think it would be better to put it into the hands of the authorities as soon as possible.

796. Supposing that the continuous discharge system was in force, and that the back of the page was left blank for indications of character, such as "V. G." or "G." to be stamped or endorsed upon it when desired, do you think that if a seaman came forward with that space consistently blank, because he had chosen to accept no record of character, such a fact would operate against him in your opinion?—I should think so. It would amount to the same thing as the case of a man with no character.

797. Would you treat him as if he had the word "decline" under the present system? or do you regard that word with disfavour?—Personally, I never look now at a man's discharge certificates. You might then be able to identify the man, but at present one has no means of identification, and you do not know whether you have before you the man whose name appears upon the discharge which he produces.

798. You think it would influence you against him if you found the space for character consistently blank?—Yes, I think so.

799. Supposing the system were in vogue of having a separate form for character, would you ask for the production of that?—I would, certainly.

800. You would not be content with the continuous record of service?—No; a man who has good ability and bad conduct is worse than one with moderate ability and good conduct.

801. In engaging substitutes on board at the last moment, do you think that you would still insist upon the production of their books?—A captain might then have to take whom he could get; but if they had books, he would not be so much at the mercy of pier-head jumpers. Men would have better discharges if a continuous system was enforced. If a man had a good record and broke it, say, once in port, there are very few shipmasters who would not overlook the fault. I don't think I ever sailed with or knew a master who would give a seaman a bad discharge unless there was something rather serious against him.

802. You think that most captains err rather on the side of leniency by giving a "V. G." upon slight grounds, so as not to stop men from getting other employment?—Yes, I am confident of that. The continuous discharge system for natives is considered to have been a great success.

803. (*Mr. Howell.*) I understand you come here to represent the views of the Merchant Service Guild rather than any individual opinions of your own?—Yes, except where I have expressly stated that I was giving my own opinion.

804. I take it that the view of your Guild is expressed in their resolutions so far as they have considered the subject?—That is so.

805. You think the guild has not considered the question of fresh legislation being necessary in order to introduce into a continuous discharge certificate compulsory, not only a record of service, but also a record of character and ability?—I could not exactly say they have not considered it.

806. They have not expressed their view upon it to you?—Quite so.

807. You understand the explanation of the Chairman that such a record could not be compelled without fresh legislation?—Quite.

808. Perhaps you would explain that to your Committee, and ask them for an expression of their opinion. The present law requires a certificate of discharge to be purely and simply a record of service, but it gives the seaman the option of having a record of character either in a separate document or endorsed on the back of the page. We would like to know whether it would meet the views of your Guild if the two documents were established, as they could be under the present law, instead of one complete record, which would require fresh legislation. You have told this Committee that in your view the present system of discharges has completely broken down, and that many masters do not look at certificates, because they are given so lightly?—Quite so. At present you cannot identify the man who produces the discharge.

809. Supposing a system of continuous discharges were introduced, do you think that masters, so far as they could, would be disposed to insist upon the certificates being produced before they engage seamen?—Yes.

810. Might it not require the endorsement of their owners in some cases before they adopted that?—Owners, as a rule, do not interfere with the shipping of the men.

811. Emergencies might arise where it would be impossible for the master to insist?—Yes.

812. You think they would be much more disposed to insist upon the production of a continuous book than on the production of the present certificates of discharge?—No doubt.

813. You think a "V. G." character is given very lightly now?—Yes, I think a "V. G." is often given to avoid trouble.

814. You think that masters are much more inclined to give a "V. G." discharge when it is not deserved than to give a bad character when it is not deserved?—Very much more so.

815. (*Chairman.*) Why should the tendency of a master to give a "V. G." discharge when it is not deserved be altered under a system of continuous discharges?—As the discharge is at present the master knows it is really of so little value that it does not matter whether he puts "V. G." or "Decline," because, as I said before, if he puts "Decline" the seaman will tear it up or do away with it, and pretend to have been ashore during the period it covers, or he will get another discharge from somebody and produce it as his own. If a captain declines to give a good character there is often trouble, and no good done by it.

816. Don't you think that the saving of trouble and bother is much oftener the reason?—No; I don't think it is. I think it is because they recognise the uselessness of the discharge.

817. You think that if the discharges were made continuous and men could not tear them up the master would be more careful what character he gave?—I think he would give the seaman his proper character; but, if he erred at all it would be on the side of mercy. That I am confident of.

818. (*Mr. Howell*.) Is there anything you would like to add before concluding your evidence?—I don't think I have anything to add, except that I think the point about identification is a strong one and that any dis-

charge is absolutely useless without a description of the man to whom it belongs.

819. Do you think that a system of continuous discharge would be popular with the seamen?—I think it would be popular with the respectable and better class men. There is no difficulty at present in obtaining men for the leading lines. They get the best men, who are well fed and well treated. They get practically all the best Britishers in the big lines, where they have the system of continuous discharge practically in vogue. I refer to the Cunard and White Star lines, and I think the Dominion line do the same. They have no difficulty in obtaining men; in fact, it is just the other way.

(*Chairman*.) Thank you for your evidence.

*Capt. G. H. Barclay.*

20 June 1899.

## FOURTH DAY.

*Tuesday, 27th June, 1899*

PRESENT :

The Right Hon. The Earl of DUDLEY (*Chairman*).

Captain A. J. G. CHALMERS.

Mr. J. CLARK HALL.

Mr. W. J. HOWELL.

Mr. C. HIPWOOD, *Secretary*

LORD MUSKERRY, called; and Examined.

820. (*Chairman*.) I think, Lord Muskerry, that you have brought the subject of continuous discharges for seamen before the House of Lords upon more than one occasion?—I brought it forward there last February.

821. And the previous year?—In the previous year I alluded to it.

822. Have you not yourself had practical experience of the subject?—No, I can't say that. I never was in the merchant service; but ever since I left the Navy I have been mixing myself up more or less with these matters. I have always taken a deep interest in the subject.

823. I think you yacht a great deal?—Yes.

824. And therefore have some practical knowledge of this matter in connection with yachting?—Yes.

825. Before bringing the subject before the House of Lords, no doubt you considered the practical means by which an improved system could be carried out?—Yes. I have had the benefit of a number of suggestions from masters and others connected with shipping.

826. Would you tell us in what way you would like to see an improvement carried out. You may assume that we are acquainted with the disadvantages of the present system?—These disadvantages are very great. In the first place any improved system should be compulsory.

827. When you say compulsory, I suppose you mean that the Board of Trade should approve of a form?—Yes.

828. And that only one form should be so approved?—Yes.

829. That would make it compulsory?—Yes. The Shipping Federation issue a very good form; and the form for *Lascars* is similar. They all tend to the one point of identifying the man and giving a continuous record of his service. The good seaman who is steady will value that very highly, not only while he is serving *aboard* but also when he goes *ashore*. It is a valuable record for him to have. As for it being stolen or sold, I think that if the person is described, as is done in the case of the Royal Naval Reserve, personation would be almost impossible, unless in the case of a person who, in more than one respect, very closely resembled the real owner of the certificate.

830. You talk of the certificate and its value as a continuous record of service, would you make it any more than that?—I would include the man's conduct too.

831. In our present form, there are two discs at the bottom for character and ability. The Act says that the seaman on discharge, if he wishes for a record of his character, may have it either given to him upon a separate sheet of paper or endorsed upon the back of his discharge certificate?—Yes.

832. As a matter of fact we don't do either the one or the other, for if he wants it the character is put in these discs at the bottom?—Yes, I understand, V.G. or G., as the case may be.

833. You understand that it is within the option of the seaman to take it or not?—Yes.

834. He need not have it at all unless he likes. Now if we were to bring in a compulsory system by which every seaman was forced to take a record of character and conduct, that would require legislation?—The object, of course, is to try and get as good a class of seaman as possible, and a continuous record should tend towards that. Another object is to enable masters or mates, in choosing their crews, to have some good means of judging of the quality of the men who seek employment. An improved system should do away with men shipping as A.B. who know nothing about the business, and it should largely do away with what are known as pier-head jumpers. I think we must regard the feeling of masters in this matter, and their feeling is very strongly in favour of a continuous record. As for the case of a master giving a seaman a bad character who did not deserve it, that may be found sometimes in other ranks of life, but if a master took an obvious spite against a sailor and unfairly gave him a bad character I should think the seaman ought to have some remedy by means of an inquiry. He ought to be able to come before the Board of Trade and ask for an inquiry by a Board of Trade official. I am only putting this forward as a suggestion.

835. I am afraid we should want special legislation for that?—Such cases would be the exception. I am only saying they might occur, but probably they would be very rare indeed.

836. Do you think it would meet your point if a seaman had two books, one which showed his record of service and described him personally and the other with a similar description which contained his record of conduct, if he wished to have it. Under such a system good men would keep the two, and when seeking to be taken on board a ship they would first of all show their record

*Lord Muskerry.*

27 June 1899

Lord  
Muskerry.

27 June 1899. Royal Naval Reserve, and they have only one book, which seems to give no trouble.

837. (Mr. Clark Hall.) That book gives no record of character?—Indeed.

838. (Chairman.) They have these continuous discharge books abroad, but none of them record the character except the Federation book, and that is purely voluntary?—I thought the Lascar book, as used in India, recorded the character.

839. I don't think you can quote arrangements for native seamen in India as upon all-fours with the cases we are considering?—No, but the continuous record here also is a very necessary thing. Discipline has fallen off tremendously in our Merchant Service.

840. Don't you think that if you were to establish quite a new precedent, and compelled seamen to take a record of character, whether they liked it or not, upon a continuous form, and thus departed from the custom not only of this country, but of every country, that would be tremendously resisted by the seamen themselves?—No doubt it would be resisted by those I call the "bad hats."

841. It would be resisted very much on behalf of the seamen?—It is difficult to say. You would think that the best class of men would be only too glad to have such a record.

842. Don't you think that practically all you want could be achieved by a separate record of character, which might be done without much trouble and without the legislation that might otherwise be required?—I would be rather curious to know how that would work out. The "bad hats" would only produce their record of service.

843. Then would that not show that a man's record of character was not good enough to produce? It would be a safeguard to the captain. If the seaman suppressed his record of character, that in itself would be such a suspicious circumstance that it would put the master on his guard?—Yes, I agree with you there.

844. It seems to me that that would be pretty much the same as if a man declined to have the disc filled up, or as if the captain wrote "decline" with reference to character?—The record of service would show, to some extent, whether the man was capable or not. That would be found in rating him. If a man went on board a ship as an A.B. the master would soon find whether he really deserved that rating.

845. You mean that the master could disrate an incompetent man at sea?—Yes, and the master has to state in what capacity the man served during the voyage. It is for the masters to do their duty in making a true record.

846. If there were two books, any seaman could practically have a continuous record of his service, and also a record of his conduct?—Anything would be better than the present system.

847. Another important point is that we should in that way comply with the present law. That law gives to the seamen the option of taking a record of character or not. Any seaman discharged need not have one of these discs filled up. Indeed, he could even object, if he liked, to having these discs put there at all?—I understand that a seaman might have a continuous record of service now if he liked, as a discharge certificate is compulsory, although the other record is voluntary.

848. The service record would be compulsory and the conduct record would be voluntary?—I think that would be to some extent an advantage. It would certainly tend to do away with the risk of a master shipping a man in a capacity he is not fitted to hold. It would do away, for instance, with the case of a fireman shipping as an A.B.

849. Because his previous record of service would show in what capacities he had been employed?—Yes.

850. Do you think that at present they sometimes show somebody else's certificate of discharge?—Yes, sometimes. If a man gets a bad character he may either tear it up or not show it. Even the logging of a man is not regarded at all sometimes.

851. (Mr. Clark Hall.) You spoke of two books as meeting the difficulty; one for service and the other for conduct?—Yes, the chairman suggested that.

852. In the conduct book, as well as in the service

book, the man and the nature of the voyage would have to be described?—Yes.

853. If that were so the man who had a bad character for a particular voyage might produce only his service book for that voyage, and say he did not want an entry in the other book. But he might have his service entered in it and by-and-by he might produce his conduct book and not his service book when seeking an engagement?—The service book is absolutely compulsory; he must produce it.

854. He must receive it, but he might say he had lost it?—Another copy could be got at a very small charge, and a master has himself to blame if he ships a seaman who does not produce a service book. The other book is only to show character, and unless the seaman brings it out to have his character marked upon it he has no need to produce it at all. If the seaman says: "I do not want my character recorded," he need not have it. The description of the voyage would only be entered in it at the time of marking the character.

855. Then his character book would contain a record only of his good voyages and not of his bad ones?—Exactly. But against that you have the service book for comparison with the other, and if it appears that there is no mark of character corresponding to a certain voyage, it may be inferred that the man is a "bad hat." It is true that he might say he had left his conduct book behind him, but it will be for the master to judge as to the truth of that. I think the record of service is even more valuable than the record of conduct, because when a ship-master is paying off his crew he may be in a hurry and may log them all as V.G. in order to save time and trouble. I regard half of these certificates with the discs as being absolutely useless.

856. (Captain Chalmers.) Do you think that the masters would value a continuous record of discharge?—Decidedly I think so.

857. I should like to know your reasons for that, as you have just stated that masters at present pay little heed to the character record, and distribute V.G. right and left without much discrimination?—I say that often occurs when masters are in a hurry, but there are captains who do regard these matters.

858. Do you think that the masters who give haphazard characters because they are in a hurry form the majority?—I could not say that for certain, but I don't think they are.

859. What I want to be at is this, if the continuous record of service is introduced, its usefulness will largely depend upon the masters making it useful?—It will entirely depend upon that.

860. Do you think they are prepared to take the necessary trouble, which they are not doing now, according to your account, to make a true record of character?—Yes, I decidedly think so. I know that the feeling on the subject has been very strong. I believe it is rather the exception to find a man who would not do his duty, so that on the whole the average would usually work out all right. Captains very much want a continuous record, and I think it would do good.

861. Do you think the mere changing of the form would influence the masters?—I think the fact that it is continuous will influence them, because then it will be of value, whereas the certificate now given is often of absolutely no value at all.

862. Would you advocate the one book being a continuous record of service only, and bearing nothing upon it with regard to character?—I should have preferred to have the record of character with it, but as Lord Dudley suggested the desirableness of saving extra legislation, I think it might meet the case to have the conduct, which is voluntary, upon a separate record from the certificate of service and ability, which is compulsory. Then, of course, the matter will rest with the masters. If a master looks carefully into the papers and compares the two books together he can easily form an opinion.

863. Would you advocate the pages of the continuous discharge records being left blank on the back, to bear an endorsement if the seaman chooses to have it in that way, for at present he can choose whether he takes a separate form or has his character endorsed?—I think that is a very good suggestion. A good man would be only too glad to have his character endorsed on the back of his certificate.

864. In that case you think that a master would regard a continuous certificate bearing on the back of it a report of character as of value?—Most decidedly. That would be a great safeguard. The certificate of discharge would

show the man's experience and capability; if he has been a good man he will have his record of character, but if he has been bad or indifferent he may not have his character, and the master having that fact before him will be capable of judging. The master would then ship him or not with his eyes open, but will know, at all events, that the man is what he professes to be. Individually the man may be a "bad hat," but if the master has a good crew otherwise, one indifferent man amongst them may not count for much.

865. You are no doubt aware that at present the master is the only one who has anything to do with rating. If he has an ordinary seaman serving with him on the voyage, and thinks him an extra good man, he can upon the day before he arrives home, or a month before he arrives home, rate him as an A.B. and give him wages as an A.B. Would you leave the question of rating as it stands now?—Yes, I think that could be left as it is. It is only after about a month at sea that a master fully knows his men.

866. You would not attach to the continuous discharge any condition that after a certain time at sea as O.S. a man should automatically become an A.B.?—No, there are ordinary seamen who have never become A.B.

867. You mean that there are men with five or six or seven years' experience, who never become fit to be rated as able seamen?—That is so. Take, for instance, your London Tug Service. They are all mates. There is the master of the tug and the first, and second, and third, and fourth mate. They ship as cooks' boys and gradually climb upwards. My attention was drawn to this lately by seeing on one of these tugs a couple of fellows trying to run out a warp, and I saw from the way they were handling the boat that they knew little or nothing about the business, so I asked them, and was told what I have repeated to you. They do wonderfully good work of a kind, of course, but they are not seamen in any sense.

868. Then you would leave the rating question as it is now?—Decidedly.

869. And not mix it up with the continuous discharge question?—No, certainly not.

870. Do you think there would be any use in abolishing the intermediate G., and only retaining the V.G. and Decline?—No, I would keep the V.G. and the G. and the Decline as they stand now.

871. Suppose the book form to be in vogue and the crew to be assembled at the shipping office, what action do you think the master should take when he calls the men up. Should he make them produce their books?—I understood that as a general rule the chief officer selected the men.

872. Yes, but I am supposing that the chief officer has selected them, and that they have come to the shipping office?—If he has done his duty he should have looked at their record in picking the men. If there was a doubtful man among them who fails to produce some of his conduct certificates, although he might have a good continuous record of service, the mate might bring that man up for the master to say whether he would ship him or not.

873. Don't you think they should produce their books to the superintendent?—Certainly.

874. And that the entry of engagement should then be made in the book—that is, that the entry should be made in the continuous record book after they have signed on?—Yes.

875. And on paying off the entry of discharge would be made?—Yes.

876. You think it is necessary that the book should be produced at the time of engagement, and that the engagement should be entered at that time?—I think so. There would be then no mistake.

877. Supposing that were not done, and that the man deserted?—In that case the man would lose his book, but he could get a new book. I think it is necessary for the superintendent to keep track as far as possible of the books and entries.

878. Would you advocate a system of duplication; that each book should be duplicated or that the Registrar General of Seamen and Shipping should keep a record?—A record should certainly be kept, but as to the necessity of keeping a duplicate I should say no; it would take a very short time to write up a new book when necessary.

879. Supposing a man loses his book and applies to the Registrar for a new one, how is the service to be ascertained?—I am presuming that a record is kept.

(Mr. Clark Hall.) The seaman would apply, and would state the ships in which he had served.

(Captain Chalmers.) That would necessitate going through many ships' papers.

(Mr. Clark Hall.) It is done every day.

(Witness.) The same thing applies now if a man loses his present form of certificate. I think he can get a new one for a shilling or some small charge.

(Mr. Clark Hall.) For fourpence.

880. (Captain Chalmers.) (To witness.) Do you think we could depend upon the shipmaster to demand the sailor's book, and to keep it during the whole voyage?—I think you could. The shipmaster of the present day is very different to the old type of shipmaster.

881. In case of desertion abroad, what would you recommend being done with the book?—On return home the master should hand it to the superintendent, notifying that so-and-so has deserted; such a man might not come back for a new book.

882. Might he not ship before a consul in the port where he deserted?—That must be left in the master's hands. If a master ships a deserter under such circumstances without a certificate he does so with his eyes open.

883. Do you think it would be better for the books to be handed to the consul?—No, I do not.

884-6. If a man without a book or discharge certificate could not ship abroad, do you not recognise that in the case of a port where there were many desertions, the charge upon the State would be very great for sending home distressed seamen; I mean, supposing there was a port near a gold digging industry, and that there were wholesale desertions from ships, and that the books were to be kept in the master's possession, and brought home to the central authority, how would the seamen get away from that foreign port? If the men had no book of discharge, and could not ship without one, the State would have to send him home as a distressed seaman?—The probability is he would not ship in any vessel of the same nationality.

886. If the man had no book of discharge, and could not ship without one, the State would have to send him home as a distressed seaman?—The probability is he would not ship in any vessel of the same nationality.

887. If the book were handed to the consul the man could come and regain his book. The only penalty would be that there would be a blank in it showing that he had deserted?—Then, in that case I think you should have some proviso that, after a certain lapse of time, the consul should return that book to the superintendent of the port where the man shipped.

888. Going back now to the question of character; suppose the case of a certain class of men who studiously decline to have their character recorded, whether good, bad, or indifferent, and only want a record of service, do you think the fact of a man's papers being a blank with regard to character would influence the captains against engaging him?—It would influence me very much, and I suppose it would naturally influence captains.

889. But suppose you refer to his record of service, and find it pretty continuous, with only a few small breaks and no desertions; would not that be in itself a testimonial to the man's industry?—It might be an indication of his ability and experience. If a man was on the whole a decent respectable man, and there were only one or two blanks in the character record over a long period, I don't think the master would seriously regard that, because a man will break out now and again, and, moreover, it is possible that a man might not get on well with one master or with one set of officers. They might have fallen out over some trivial thing through incompatibility of temper, or something of that sort, and if the seaman had generally a good character, I don't think a master would seriously regard one slight lapse, but if the seaman had absolutely no record of character it might be assumed that there was something wrong.

890. Do you think, on the whole, that the masters would do all they could to assist a scheme of continuous discharges?—I think they would, and that they would regard it as a very great boon.

891. Considering the exigencies of the service, when a shipmaster has to engage substitutes at the pier head, would you make the rule rigid that he should not ship any such man without a book?—That would be an emergency where the man is waiting at the end of the dock, and the pier-master wants him to clear off, and the tug is ready to take out hands wanted by the master.

Lord  
Muskerry.  
27 June 1899.

Lord  
Muskerry.

27 June 1899. 892. But it is the exceptions which upset the whole system if they are allowed?—The adoption of a continuous record system would more or less safeguard the master against being suddenly left without hands.

893. I am supposing a case where a seaman had shipped and had failed to join owing to drunkenness or something of that sort, and that the boarding master takes him down to the pier-head in a sober moment and pushes him on board another vessel as a substitute. If a master is allowed to sign on such a man without a book, will the man not earn by that voyage the right to claim a continuous record book?—But that book will only start there and then, and if a man has been thirty years at sea he will start the new book as if he had been only one voyage.

894. Would you favour the giving of a new book to that man?—You cannot very well stop it; if he has gone his voyage, and done his work well, he must have his discharge book, but it would start there and then.

895. How are we to overtake such a case as that where a man's book has gone away in the ship which he failed to join, and he sails in another ship? When the first ship arrives, his book is handed to the superintendent to be sent on to the Registrar-General of Seamen. How can the Registrar-General trace the arrival of that man home and the granting of a new book to him when his old book is actually existing—

896. (Mr. Clark Hall.) If the man gives his proper name we should turn up in our central register the records of his ships, and would see that he had deserted that particular vessel, and we could give him his old book, which would show that he had not completed that voyage?—(Witness.) I presume that when the man did not turn up the master would not take away the book with him on the voyage, but might return it at once, with a note that the seaman had failed to join.

897. (Mr. Clark Hall.) He ought to do so, but in the case of pier-head jumpers that might not be done?—As the continuous record system would be a great boon to the master, I think I should be disposed to inflict some kind of penalty on a master who did not try to carry out as far as possible the intention of the scheme, as it is really intended to safeguard him. A captain would be a black sheep who, in the case of a drunken rowdy crew, would describe them all as "V. G." The continuous record system is very much needed, and I think it would have a very good effect. The masters may have been somewhat slack with regard to the form of discharge hitherto granted, because they knew that it had little or no value. A master might say, "What is the good of my doing my duty and marking this certificate with a bad character, when I know that the man will only chuck it away, and then ship with somebody else's." I think the description of the seaman

as a means of identifying him would be a most valuable part of the scheme.

898. (Mr. Howell.) You have suggested that when a seaman was not satisfied with the character he got from his captain, there might be an appeal to the Board of Trade. Now, as the character given to the man is an expression of the personal opinion of the master, what would be the good of appealing to the Board of Trade about that?—The master might be a bad hat, and might have taken a dislike to a particular man, and refused the man a really good character which he really deserved. In the event of an appeal to the Board of Trade the first, or second, or third officer might testify whether the character was a true one, but whether they would always give you their real opinion, I cannot say.

899. Would you seriously propose that every seaman dissatisfied with the character given to him should have a right of appeal to the Board of Trade?—Not every seaman. I was supposing quite an exceptional case, and my only reason for suggesting it was that when I brought this question before the House of Lords there was a suggestion made that the character record might be used as a weapon of terrorism or tyranny by an unscrupulous master, and I was anxious to meet that objection.

900. But I think you will admit that is what it comes to. If you give a right of appeal to any seaman, you must give to every seaman a right to come to the Board of Trade to settle a matter of opinion between themselves and the captain, which I think you will see to be impossible?—I think I made that suggestion before Lord Dudley suggested the system of having two books.

(Mr. Howell.) If your proposal means anything it means that every seaman dissatisfied with the captain's certificate might appeal to the Board of Trade with a view to determining whether the master was justified in his personal opinion of the seaman.

901. (Chairman.) I understand that Lord Muskerry is disposed to qualify that opinion upon hearing that it is purely optional whether a seaman takes a record of character or not, and he only suggested, as I now understand him, that there might be an appeal to the Board of Trade when he understood that it was contemplated to compel every seaman to take a record of character. (To witness.) If the record of character is optional you will withdraw your suggested appeal?—Oh, yes, certainly.

902. I suppose you understand that in foreign countries the discharge certificates are mere records of service, and contain no record of character?—I think the record of service, if continuous and compulsory, would go a very long way to meet the case.

(Chairman.) We thank you very much for your evidence.

Capt. S. R.  
Chandler.

Captain S. R. CHANDLER, called; and Examined.

903. (Chairman.) You are no doubt aware that this Committee is inquiring whether a change can beneficially be made in the system under which seamen are now discharged. It has been said that the present form of discharge certificates is worthless, because they can be destroyed if a seaman is dissatisfied with them, and because there is no means of identification to make it certain that the certificate really belongs to the man who presents it?—Exactly.

904. Would you tell us what your views are with regard to the present system?—I believe that the present system is perfectly useless.

905. For the reasons I have mentioned?—Yes, for those reasons. About eighteen months ago at Barry I had two men bringing the same man's discharges when they wanted to ship with me.

906. For the same ship?—Yes. At present there is no check upon them. One of the greatest drawbacks to the present system is that you can never tell whether the discharge really belongs to the man who presents it. We have often cases where men ship with discharges which could never have been given to them, because they are not sailors, and understand very little about ships, and we can trace the disparity in age, for instance, between the person to whom the certificate refers and the man who presents it.

907. Then you don't like the present system?—No, I can't say I do. I would almost as soon have no discharge at all, considering how very little good the present discharge is.

908. What would you like to see put in its place?—I

believe the only discharge that would be any good, would be a compulsory and continuous one—a book where a seaman's service and character on different ships and voyages were entered consecutively. One of the principal objects of giving a discharge I suppose is to induce men to conduct themselves properly when they are on board ship.

909. Would you not rather put it the other way, that they enable a master to have some means of forming a judgment of the men who apply when he is engaging a crew?—The one includes the other. If a seaman knew, when he misconducted himself or made himself objectionable on board one vessel, that such a record would make him less likely to get employment on another vessel, I believe that would be an inducement to him to behave himself better than a good many of them do.

910. Do you think that a man with a G. discharge is under any disadvantage compared with a man who has a V.G. discharge?—Yes, I believe he would be in some instances. At the same time some of the finest companies in England never give anything but G. discharges—the Cunard Co. for instance, and several of the large Atlantic lines.

911. Why is that?—I don't know, but I suppose they go upon the theory that a man cannot be much better than a good man. I know that, outside the big lines, the V.G. is freely given, but I have often thought it a great mistake to give it indiscriminately.

912. Is it given indiscriminately?—Yes, and has been for many years past.

913. And is it not the result that the men are shipped

rather indiscriminately?—Yes, and I think the shipping masters in the Mercantile Marine offices are one great reason of that. On several occasions I have given men G. discharges, not because they were bad, but because they really did not merit a V.G. discharge. Perhaps they were not particularly good helmsmen or they might be lazy, or not quite up to their work; but the shipping master has always interfered on behalf of the men, and said they could not get another vessel if they had only a G. discharge.

914. Have you known that done in more than one port?—I have seen it done in London, at Tower Hill, and in Cardiff several times, and in Liverpool too.

915. (*Mr. Howell.*) Have you allowed yourself to be so persuaded into giving a man a V.G. discharge when he did not deserve it?—I have not.

916. (*Chairman.*) Has the Superintendent actually said what you have mentioned to us?—I don't know that I am right in saying the Superintendent himself has said it, but it has been done by his deputy or the discharging clerk, which practically means the Superintendent.

917. You mean that he has reasoned with you and asked you to improve the record of character?—He has told me that nobody would take the men if they only had a G. discharge, but when I pointed to men who find employment on getting a G. discharge from vessels which I knew never gave anything else but a G. discharge, he has rather modified his view.

918. With regard to the continuous form of discharge which you would like to see introduced, you would, of course, desire to make it compulsory?—Yes, it would have to be compulsory.

919. You would not suggest that we should make again any attempt on voluntary lines similar to what has been done before?—No, that would be no use; it would be a failure in the end.

920. You want to see the Board of Trade approve of a particular form of continuous discharge?—Yes.

921. Would you like to see such form bear a record of character as well as a record of service?—Yes, I should think so.

922. On the same discharge sheet?—I have not thought particularly of any one precise form. There is a book form issued by the Shipping Federation from which one can see at a glance what a man's character and capacity are.

923. That is of course a purely voluntary thing. There are several countries which have continuous discharges in book form, but I don't believe there is a single instance, except the Federation book, which contains also a record of conduct and character?—I could not say as to that. I have seen foreign sailors with books, and they have asked me to fill them in so that they could take them to their Consuls to have them stamped, but I cannot say whether they contain any record of ability or conduct.

924. I want now to ask your opinion about a difficulty that there is in connection with this matter. The present law says that when a man is discharged he can take a record of his character and conduct either on a separate piece of paper or endorsed on the back of the discharge form. As a matter of fact, the character is never given on a separate form and never asked for?—Quite so.

925. The form of endorsement that has come into use is that on the discs at the bottom of the discharge paper. That record is entirely optional, and the seaman need not really have these discs filled up unless he likes. Indeed, he can object even to the discs being there at all; but if a record of character were made compulsory and if every seaman when discharged was required to take a record of character and ability, that would be adopting an entirely new principle in regard to discharges, and it would, of course, want a Bill to do that; but the point I am most thinking of at this moment is that it would be a new departure?—It would.

926. We have never yet forced seamen to take a record of their character, and no other country has ever attempted it. The Shipping Federation do it by a voluntary arrangement with their men, but that is a mere condition of service. They practically say, "If you come into our service you must accept the conditions of our employment, and one of these conditions is that you must have a book containing a record of your conduct." It is like a private employer making any conditions he likes in regard to the engagement of a domestic servant, but that

is a totally different thing from making a system of characters general and compulsory by means of legislation. If that were attempted, don't you think it would be very much resisted by the seamen?—I don't see why it should be. *Capt. S. R. Chandler.*  
27 June 1899.

927. It would force a seaman to bear permanently any bad marks against him?—Exactly, and that is one of the principal points in favour of the system from my point of view.

928. Don't you think that that would be resisted very strongly, and that the seaman would very much object to that, and don't you think it significant that such a system has never been tried, either here or abroad?—I take it from you that it is not so abroad, because I am not myself aware of that fact, but I don't see why that should be an insuperable difficulty.

929. Of course, you want to allow an owner or master when he ships a crew to have some means of learning what the past character of the man has been?—Yes.

930. Might not that be met in this way; supposing you had a book of continuous discharges showing merely the record of service, and that you left the back of that book blank so that the seaman if he liked could have his character endorsed there; you might also have another book exactly the same as the service book except that it would refer merely to the seaman's conduct and character, each voyage being identified by numbers corresponding to those in the service book. The seaman could have that character book filled up or not as he chooses. That would be voluntary. Then the master, having seen the record of services in No. 1 book might ask to see the character for that voyage. If a seaman did not show it that would be significant, and would put the master on his guard. At the same time good men would see that they either had their character endorsed on the back of their discharge certificate, or that they had the separate book of character duly filled up?—Unless it is made compulsory I don't believe it would ever be anything else but a dead letter.

931. Why should not the good men take every opportunity of having their goodness made apparent?—In the first place, I don't think that the masters or owners of vessels would as a rule take the trouble to write not only in the service book, but also in the character book, unless it was made compulsory.

932. It is the Superintendent at the Shipping Office who would fill up the book?—There is a small minority of men who keep their discharges for years and show them, but these men form only about 1 or 2 per cent. of the total hands on board ship, and, really, when you take into consideration that they are not a bit better off or have not the slightest chance over others of being employed (I mean over the men who come with only one discharge, perhaps belonging to somebody else), you cannot wonder at the men ceasing to value their certificates.

933. May not that probably be due to the fact that the present form of giving the certificate for conduct or ability is a very loose one, and that the V.G. is so generally given that it has ceased to become valuable?—Most captains pay little attention to it.

934. Is not that probably the reason why there is now so little inducement for men to keep their discharge certificates?—I have known men keep good discharges for ten or twelve years with a certain amount of pride, but in the end they have little advantage over other men who are less careful, and who make two or three voyages in different ships in a year, and have perhaps consecutively four or five bad discharges. There is a penalty under the Act for giving a false discharge or false character to a man. If a seaman has been logged for drunkenness or anything else that is serious and still gets a V.G. discharge, the master who gives it to him commits a misdemeanour, and is liable to be prosecuted, but masters still give it.

935. Is not that the reason why there is at present in your opinion, so little inducement to seamen to keep their certificates carefully?—That is so; you must also remember that those men who do keep them carefully have often a better chance of getting employment, but they find out that the blackguard who does not keep his certificate is just as well off in every other respect after getting employment as they are themselves.

936. Surely the employment is the point upon which the whole thing turns. You would not suggest, would you, that the seaman who has kept a succession of good discharges should be treated differently on board ship

*Capt. S. R.  
Chaneller.*

27 June 1899.

from the man who had some bad discharges, assuming that they were both of the same rating, and both employed under the same conditions?—Certainly not.

937. Then how does a bad man have as good a time as a good man?—In the first place, the keeping of the discharge certificate for years entails a certain amount of trouble.

938. Is not this the grievance, that the man who keeps his discharge certificates well at the present time does not have any greater chance of getting employment than the man who does not keep them at all, or who has bad ones, because the masters do not give sufficient preference to good men?—I cannot say that is so in every case.

939. If a seaman can show a succession of V.G. discharges properly kept, does not that give him an advantage in getting employment?—He does have some advantage certainly, but the inducement to keep these discharges and to take care of them is scarcely sufficient.

940. Why?—Well, when he is engaged he may be put into the forecabin with a lot of inferior men who have shipped with somebody else's discharge certificate, and who know little or nothing about their work.

941. Do you mean that he thinks it a shame that, having kept his discharge certificates carefully he should find himself placed on all-fours with inferior men, who have begged, borrowed, or stolen their certificates?—He is only placed on an equality with them, but he is really worse off.

942. Why?—Because he has to do their work, owing to their incapacity.

943. I can understand that may be sufficient to make a good seaman who finds himself in a plight of that sort very furious with the present system, and very desirous to see it made impossible for scoundrels to ship under false colours, but I do not see that that is any reason why he himself should give up being careful, or should cease keeping his own discharge certificates consecutively in good order?—I rather think so. I have heard men say "I have kept my discharges for a long time, but they don't seem to do me any good," and I must say that there is some truth in it.

944. (*Mr. Clark Hall.*) You admit that a master prefers a seaman who can show plenty of discharge certificates?—Oh, yes, but the proportion of men who keep such certificates is very small, so small that it gives men collectively no chance.

945. (*Chairman.*) Is not this probably the fact, that a seaman, when he first starts being careful, thinks he is going to gain an advantage by keeping these certificates and showing a continuous good record, but he finds afterwards that a lot of men get into his position who do not take similar care, and that men get a ship quite easily, without the trouble of keeping all their certificates correctly, and, therefore, he gives up doing it himself, with the result that, when he becomes lax, the captain becomes lax, and there is a general laxity all round. Is not that at the bottom of the whole thing?—There is quite as much laxity on the part of officers of ships in that respect as there is amongst the men. If the officers had in past years enforced the present discharge system, with the record on the back about conduct and capacity, it would have made a great deal of difference in the men who now go to sea, but they have never done it.

946. I suppose the captains are lax in the first place about the record of character, and everybody recognises that the present certificates are practically valueless, and that being so, a captain is apt to think that it does not make twopennyworth of difference whether he gives a man a good or a bad discharge?—Quite so, it is certainly no proof of his character.

947. Surely it comes to this, that it is the fault of the masters in first of all giving V.G. characters to men who do not deserve them, and secondly in shipping men who have not good characters?—I do not say all, but there is a good deal in that. If masters of ships had written true reports, even the present system of discharge certificates would have been a far greater check upon the behaviour of seamen than it is at present. The captains have never done it systematically. Some of them will give a man who has misbehaved himself in a most flagrant manner as good a discharge as a man who has not offended. I have spoken to some of the masters who do this, and they explained to me that they want to avoid a scene in the shipping office. The consequence is that the man who is a bad egg gets a discharge which enables him to find employment soon on another vessel, and thus to inflict

himself on somebody else in the same way, although he may be useless for his work.

948. And now to go back to the point from which we have rather wandered. I understand that what you want now is to put an end to that laxity. You want to bring about a system by which the discharge certificates should really mean what they profess to mean, and by which the evil of shipping under false discharges should be put an end to, that is, personation. Would that not be met by my suggestion of having a compulsory certificate of service, and a voluntary one for conduct or character, which good men would be glad to have. The bad men might not take their bad marks, but masters could judge when the certificate was presented to them?—Yes.

949. Is that not quite sufficient security and guarantee? Would it not be much better to have a system of that sort, which, if a master used his brains at all, would be sufficient to show him what kind of men were applying, rather than to try and bring in a system which would be strongly opposed by the seamen, which no other country has ever adopted, and which would be an absolute departure from our present practice?—I am afraid that as long as a thing is left optional in any matter pertaining to ships, it is apt to become a dead letter.

950. What would become a dead letter under that arrangement?—The voluntary part of the business.

951. What part?—The part concerning the record of the man's character.

952. Please describe to us what you think would happen?—It would not be filled up at all.

953. Do you mean to say that the good men would not seek to have the record of their characters filled up?—No. There might be the same small proportion, as now, but not more.

954. Remember it is not compulsory to have the discs filled up now. No seaman need have them filled up unless he likes?—That is a point I have not looked at. So far as the man is concerned, I should say he had better take his character upon the discharge certificates rather than in any other way. I never knew of a case of a man's character being given to him in any other form. That form has become practically compulsory by practice.

955. I believe that is quite true. The men don't realise that it is voluntary?—No.

956. But I don't yet quite follow what you think would lapse. Do you think that the record would not be filled up at all? That when the papers were sent to the Superintendent to be filled up, there would be no entries to put into them, and that, when the Superintendent or deputy Superintendent asked what the man's record was, the good man would not say, "Yes, I want my record put down"?—One or two per cent. might ask for it; I think anyone who knows seamen as well as I do would agree that if you want to do anything for them you must legislate upon it and make it compulsory. They will never do anything if it is optional, and left to their own choice. If one man takes a certain line, or is indifferent, the others are very apt to follow like sheep.

957. Why are they not more indifferent now as to the record of character?—They are never consulted. It is stamped upon the certificate, that is, upon the present form of discharge, without their being asked at all. The entries are first made in the ship's official log-book—a report on every man's character, conduct, and capacity—and are copied from that on to the discharges. The Superintendent or his clerk copies the G. or the V.G., or the decline, as the case may be. One thing that might be considered the greatest drawback to a compulsory discharge system is that it might be putting a man completely in the hands of a master who might have a spite against him. I have heard that reason advanced against it, but if the question were legislated upon, the Act could be so framed that it would not be left within the power of the master alone to ruin a seaman, or to spoil his career from motives of personal spite, in fact, even now it is almost impossible to do it.

958. How could you get over that difficulty?—Even now such a thing could only be done by a certain amount of conspiracy between different people. Suppose a man shipped in a vessel and did his work well, and kept sober, and, on going to the shipping office, got a bad discharge certificate because the master of the ship had some spite against him, that would be most unjust, but I never knew of such a case, and I don't suppose there are many cases where that happens. I never knew a man have a bad discharge given to him unless the log-book showed some

reason. A captain cannot reasonably give a man a bad discharge unless he has logged him for some offence, and the entry in the log-book must be signed not only by the master himself but by the mate, and, in the case of an engine-room offence, by one or more of the engineers. Why not have more to sign it? Why not require that the entry before it is legal should be signed by the master and the two mates and the engineer and two or three of the crew. There would be no difficulty about that.

959. Why need it be a matter for the log-book at all. Surely a master could give a man a bad character without actually logging him, or perhaps I should rather say, a less favourable character. You said you gave men a G. discharge instead of a V.G. not because they were bad, but perhaps because they were not good helmsmen or lazy. If you can do that without logging them why should you not give a man the character below G. for similar reasons; and if it comes to a question of conspiracy is it not quite possible for a master who wishes to do it, to worry a seaman into an act of insubordination? Supposing he has a spite against a man on board ship, is it not easy to go on pestering and worrying and nagging at the man until he is provoked to answer back, and then he can be logged for his offence. Is it not quite easy so to treat a man who has perhaps been ill or is not so strong as the others, to put him to the hard work, to send him aloft constantly, to worry him, and then, when he turns round to protest, to call him a lazy brute; is it not possible for any master to do that?—It is possible, but I have not such a bad opinion of human nature in captains. That sort of thing may be done in isolated cases even on shore. I saw a policeman the other day who went on nagging a man until the man turned and tried to hit him, and then the policeman ran him in.

960. It is not a question of whether that sort of thing would be done often. Of course it would not. I hope and believe that captains are not inhuman brutes, but you told us you had heard it advanced against a compulsory system, that a seaman might be placed too much at the mercy of a spiteful captain or of a nagging and unscrupulous skipper. How would you set about preventing the danger of that?—I would provide that any logging against a man should be witnessed not only by the master and mates, but should also be signed by one or two of the crew. That is all that is necessary. The master and the mates might possibly enter into a conspiracy, out of spite against a man, and might provoke the man even into assaulting one of them, but they could not pursue that line for days in succession without other people about the ship noticing it. I would have the entry in the log signed by more than the master and the mates.

961. What would the effect of that be. If you extended the number of signatures you would have to bring in some of the seamen, and in nine cases out of ten would not the situation then be that you would have the master and mate on one side and all the seamen on the other, and there would be a nice wrangle on board as to whether a man deserved to be logged or not, so that there could never be a unanimous decision?—In a case of drunkenness there would be no getting over the fact that the man was drunk. I have never had any difficulty in getting entries signed even in cases where fines were inflicted.

962. Supposing you got over the difficulty, so far as the logging was concerned, by extending the number of signatures—and I don't admit that you could—how are you to get over the possibility that you mention of the master saying "I will not log the man, but he is a lazy devil, and I am not going to give him a character; I will give him a Decline"?—That would be looked upon as a bad discharge.

963. Why should the master not say, "I will simply give no opinion about his character at all"?—Plenty of them do that in cases where the seaman cannot do his work.

964. But we were talking of the possibility of preventing grievances between seamen and masters who have a spite against them. If you have got to do this by legislation you have to show that you have thought of the difficulty and have safeguarded against it. How are you going to prevent a spiteful master refusing to give a seaman a certificate upon such grounds as I have suggested?—The law about log-books should be so changed as to make it almost impossible for a master unjustly to give a bad discharge to a seaman. It is not at all likely, unless in extremely exceptional cases, that a coalition would be formed between master and mates and engineers and others to persecute a particular man.

965. That is not the point I had in my mind. I did

not mean in regard to log-books, but in regard to declining to report?—At present the master has more chance of ruining a seaman with a bad discharge than he would have under another dispensation.

966. (Captain Chalmers.) I suppose you have had experience in command of both sailing vessels and steamers?—I never was in command of a sailing vessel, although I have been an officer on board one.

967. I suppose that, as mate, you have had to ship crews for sailing vessels?—Yes.

968. And did you in your past experience find that the present discharge certificate, with regard to ability—putting character on one side for the moment—was usually a fair indication of the seaman's qualification; and of course in sailing ships an able seaman's qualifications are more important?—Yes, collectively, I believe it was.

969. Did you find that the indications on these discharge notes was a fair guide?—Yes.

970. Then that pointed to the fact that the masters did not, through a mistaken policy of kindness, throw V.G. certificates broadcast?—Not in those days of sailing ships, but it is getting worse every day.

971. Was it any indication of character?—Yes, in many cases, one could form a better opinion of character from certificates twenty or thirty years ago than can be done now.

972. Do you think that now when steamers are so much in vogue, and when the majority of men serve on steamers the reliableness of these certificates has deteriorated?—Yes, considerably.

973. To what do you impute that?—I consider that one reason for it—and I do not know that it is not the principal reason—is the dislike which masters seem to have to incur a disturbance in the shipping office through giving less favourable discharges, even in cases where men have been at fault. There is sure to be more or less disturbance in most cases where bad discharges are given.

974. Do you not think it is due to shortness of voyages, and to the very frequent paying off and engagement of seamen, that the masters become careless, and that in the hurry of business of a shipping office they have not time to discriminate?—I hardly think so.

975. Then you think the reason is that the masters want to avoid a scene?—Yes, I believe that is the principal reason.

976. With regard to the statement you made about the deputy superintendent being sometimes in a measure to blame for seamen getting V.G. discharges who do not deserve them, I suppose you realise the gravity of such a charge as that?—Quite so; yes.

977. You understand that the deputy superintendents and superintendents have no right to dictate in any way?—No, but they do it all the same.

978. Can you give us specific instances, in your own experience, of such a thing happening?—Yes, I have known of two or three cases in Liverpool and one in Cardiff.

979. What was the action of the deputy in that case?—He said the seaman would never be able to ship with the discharge I gave him.

980. Did it simply mean that the deputy pointed out the difficulty which a man who had only a G. character might experience in getting a ship, because G. is generally taken to mean a bad discharge?—Yes.

981. You don't put it any higher than that, and you do not say that the deputy stepped in with any authority or quasi-authority?—He simply made the suggestion that these men were hardly likely to get employed in another vessel with that discharge.

982. I suppose that would never occur in a case where a bad character was supported by entries in the log-book?—No, I have never known of that. I know the superintendents are very lenient also on the question of fines. I suppose the same feeling or motive leads them usually to take, more or less, the sailor's part in questions of fines or grievances.

983. They have authority there, have they not, to settle any dispute up to £5?—Yes, if the settlement by them is agreed upon by both sides.

984. You think that some of them show a leaning towards the seamen, which is perhaps rather natural, in favour of the weaker side?—Yes, quite true. A good many of the seamen do not fully understand these questions.

Capt. S. R.  
Chandler.

27 June 1899.

*Capt. S. R.  
Chandler.*

27 June 1899.

985. When you are engaging men yourself, do you insist upon the production of their discharge certificates?—The mate looks after that. He gets the discharges wherever he can.

986. Is it your practice to encourage the mates to ship men who have discharges?—Yes, as far as possible.

987. Is it only in an exceptional case that you take a man without a discharge?—Yes, exceptional in the sense that it might be impossible to get anybody else.

988. What about engaging a substitute at the pier-head?—In that case you have to take anybody. One strong evidence, to show of how little use the present discharge certificates are, can be found in the disregard the seamen have for them. A sailor may come to join, bringing two, or three, or four discharges, and perhaps he never turns up, and he does not ask for them again, although the ship may sail the next day, and dozens and dozens of these discharges may accumulate voyage after voyage.

989. Is that due to the fact that the men do not value them, and that if they are stranded without one they can buy one?—Or exchange or borrow one.

990. Is that your principal reason for advocating the continuous record form?—That is one of my reasons. The boarding-house masters get some of the present certificates, and give them away to men whom they want to have shipped.

991. If the continuous discharge form were made the only form, and compulsory, do you think that the masters collectively would undertake to demand the production of these books when the crew were engaged?—I should say so.

992. You think they would?—Yes, because in some measure it would be at once their security, and that security would become greater as years went on, and would satisfy them that they were getting as good men as were to be had.

993. I suppose you understand that there is nothing in the Act at present which compels the man, upon his engagement to produce his discharge from his last ship?—No.

994. Therefore if the continuous record was approved by the Board of Trade as the only form, you can see that it would all depend upon the masters insisting upon the production of these books at the engagement table?—Yes, but it could be made compulsory by Act of Parliament that the books should be produced.

995. Would that not require fresh legislation?—Yes, probably.

996. I suppose you understand how difficult it is nowadays to get legislation, especially with regard to merchant shipping, where there are so many interests involved?—I think we have not had much difficulty in getting a lot of it already. The reduction of the load-line did not take much time; some changes have been easily made that we could have done better without.

997. That is a matter of opinion; but don't you think it would be better if the matter could be arranged without fresh legislation?—I don't think it would be a success in that case. As long as it remains optional it is apt to be a failure.

998. Do I understand that the shipmasters are asking for this?—Many of them.

999. If they are, does it not amount to this, that a public department has a right to look to them for certain help in the matter of carrying out the scheme, and that if they were requested to make it a rule not to engage a single seaman who did not produce his book, would not that be just as good as an Act of Parliament?—That could be done if they would take so much trouble, and take so much interest in it.

1000. Would the continuous discharge form be of any use at all unless produced at the time of engagement?—Not the slightest.

1001. And when the seaman signed on, would it not be right for the superintendent to enter the date of engagement?—Yes, at once.

1002. Don't you recognise that that could not be done unless the master demanded the production of the book?—Yes.

1003. And made that a condition of engagement?—Yes. There ought to be a description of the man. So far as I recollect there used to be a sort of continuous discharge in merchant vessels, and I believe that then there was a

description of the man entered on the ticket, but that was before my time.

1004. You hold that if the continuous record is to be of any use, it must contain the man's age, description, complexion, colour of eyes, and personal marks?—Yes, or it would be of very little use.

1005. When you take discharge certificates now or have them passed on to you, do you retain them during the voyage?—Yes, until the seaman is discharged, if, for any reason, he is discharged abroad.

1006. You would advocate that the book forms should be kept by the master during the voyage?—Yes, or by the mate or the chief engineer; they should be retained by some officer of the ship.

1007. When sending back the Eng. 2 to the shipping office, showing that certain men had failed to join, and that substitutes had been engaged, do you think the masters would undertake to send back the books of those men who had failed to join?—I should think they would, even if it was not compulsory.

1008. What is your practice now with discharges; do you send them back?—No.

1009. Do you stick to them?—The mate or some officer keeps them.

1010. What becomes of them eventually?—They are torn up or destroyed.

1011. At present, when you arrive home, the discharge forms are filled up in shipping office, are they not?—Yes.

1012. Suppose you had a continuous record form, do you consider it necessary that it should bear the record of character and ability that is given in the official log-book?—I should say it would be better if it did, but the continuous discharge, even with that omitted, would be better than the present form of discharge; I believe, however, one bearing a record of character and conduct would be the best.

1013. Don't you recognise the seriousness of making it compulsory for a man to accept a character?—I don't see the seriousness of it.

1014. Can you give us any instance of legislation, under which one is compelled to accept a character?—Seamen are practically compelled now. If I do not get a character stated in a reference when I leave a certain company's service, the next person to whom I apply for employment might go to the last firm for a character, and they would have a chance then of cutting my throat in the dark, because I would not know what they had said about me. That is different, of course, in the case of a written character, verified by other people besides the captain himself.

1015-6. But you must recognise that there is a great difference between a master and a seaman with regard to engagements. Shipowners have ample time to write to other shipowners as to the character of a captain, and in his case there is not so much need for a written character. Suppose the continuous discharge form simply showed, upon the face of it, the record of service, and that the back of each page was left blank for the optional endorsement of the report from the log-book, don't you think that would be sufficient?—I do not see that that would carry it much further than the present system.

1017. Would it not be sufficient to enable the master to discriminate what kind of man he is getting? Suppose a man presented himself to you with a continuous form of service, but with blanks as to character, what conclusion would you form?—It would all depend upon circumstances, but an optional form must become a deal letter in course of time.

1018. Would not the absence of any record of character be regarded by the shipmaster as a sufficient indication that the character of the man was not satisfactory?—Not always.

1019. You think that some good men might elect not to take a record of their character?—It might take years before seamen got to understand the working of the new system.

1020. But that is almost always the result of any new scheme, that the first years of it involve some confusion and misunderstanding before matters settle themselves?—I had an impression that there was a continuous record of service among domestic servants in foreign countries. I know there is in Germany, and I think there is in Holland, but I could not say whether there is any mention made of capacity or conduct in such certificates.

1021. What I want to get at is this, if you were engaging a seaman and you found that he had constantly declined to have his character endorsed on his record of service, would that influence you against him?—How could it when he is not obliged to take the record of conduct? A man may feel that if he starts having his service book endorsed with a record of character and conduct, he may go on very well for a while, and then perhaps make a drop and be constantly called to account for it.

1022. That is from the seaman's point of view, but now I want you to give me the master's view. What would be your judgment of such a man? Would you be influenced against him if he showed only his record of service?—I would judge that the man was acting quite within his rights, but I should be just as far off as ever from being able to find out from the discharge what he was really worth.

1023. (*Mr. Clark Hall.*) Of two men—one who had his character endorsed and one who had not—which would you choose?—I should take the man with the endorsements; but I doubt whether any endorsements would be made in any discharges, or in more than very few, if it were not compulsory.

1024. (*Captain Chalmers.*) You think most seamen would elect to have no record of character?—I am sure of it.

1025. Then would there be any harm done?—In such circumstances what would be the use of changing the present form?

1026. Is not the continuous record form intended as a record of service?—Yes, to some extent.

1027. If you examine a man's record of service and see that it is fairly continuous, with no desertions—which would be traceable if they existed—can you not form a very fair estimate of his industry and ability?—Yes, but beyond that there is an important matter, especially on board steamers, viz., a man's conduct and character. A seaman can ship in a vessel and go abroad and get into all sorts of messes, and be as obnoxious as he can to everybody, and, when he comes back, he does not have his discharge endorsed; therefore he has a clean record and can go on board another vessel to carry on similar tactics.

1028. That is supposing that the master is content to take him without a character?—Yes, and I doubt whether there would be more than two or three per cent. of sailors and firemen who would have their characters endorsed upon the certificates if it were optional.

1029. If that was the case, and it became general for seamen not to take any endorsement of character, you would be thrown back upon searching the record of service?—That would be the only thing you could go by. A man may be industrious and a thorough sailor and a splendid helmsman, but as soon as he gets alongside the shore he may give way badly to drink.

1030. In the case of such a man, who may be everything that could be desired when at sea, yet who becomes worse than useless so long as he is within reach of alcohol, but becomes all right again and one of the best at sea, how would you deal with that man at the end of the voyage?—I could give him "V.G." for ability, and could decline to report on his conduct. I do not say, however, that I would write "Decline" in the question of conduct for a single fault.

1031. If a seaman presented himself with a discharge of that sort, would you let the "Decline" to report for character operate against the "V.G." for ability?—I would not take him if I could get a better man.

1032. A man with the "V.G." for both conduct and ability?—Yes, for both.

1033. Regardless of the fact that, as you say, the majority of captains give the "V.G." broadcast?—Yes.

1034. How, then, can the "V.G." be a guide to you?—Often it is no reliable guide.

1035. How could we depend upon them being any better guide by simply changing the form? We cannot change the nature of the masters who you say do not sufficiently discriminate?—Make it compulsory, and fine him if he gives a good discharge to a man who has been logged.

1036. But you understand that offences are not limited to the cases that are logged. A seaman may be very lazy or disobedient, and may yet keep within the mark just so far as to avoid being logged?—Yes, but on the other hand, I have known many instances where men have been logged, and who have nevertheless got good discharges afterwards. About eleven years ago I had a fireman who got drunk and created a disturbance, and

was logged. Next, day, when sober, he came and apologised to the engineer, after which he was one of the best men on board the vessel. He was discharged in Cardiff, and Mr. Turner, who was then Superintendent there, was much against my giving that man a good discharge on the ground that he had been logged. I don't say that a single instance of fault or drunkenness should destroy an otherwise good character.

1037. Is not that obviated by the master making another entry towards the end of the voyage?—Yes, but Mr. Turner's theory was that after a man had been logged he should not be entitled to a good discharge even after he had apparently reformed and never relapsed.

1038. In engaging substitutes at the last moment, do you think it would be feasible for a master to demand the production of a man's book?—Not always, at least not for some time yet.

1039. How are we to provide for men getting afloat who have not a continuous book of discharge?—They would have some difficulty at first, until they began to realise the fact that they must keep their discharges. You cannot introduce any innovation without some individual cases of injustice or inconvenience.

1040. If a continuous record were adopted, you would still leave it open to the master in engaging substitutes to engage a man without a record?—Yes, you would have to do that, for under these circumstances seamen with them would not be always obtainable.

1041. In cases of desertion abroad, what would you recommend should be done with the deserters' book?—It should be returned to the superintendent at the Mercantile Marine office or to the Registrar-General of Seamen.

1042. (*Mr. Howell.*) I should like to ask you two or three questions with a view to focussing your evidence. I gather your opinion to be that there should be a continuous discharge for seamen, instead of the present form of discharge, and that these continuous discharges had better contain a record not only of service, but also of character and conduct?—Yes.

1043. In fact, what you would like to see is a complete record of the man's history as a seaman?—Yes, quite so.

1044. And you think that if it is necessary to give effect to that by legislation, an attempt should be made to do so?—Yes.

1045. I assume you quite understand what we can do by the present law—that the Board of Trade could approve of a form for continuous record of service and another form for the record of character, to be filled up if the seaman chooses. Would you rather wait until legislation became possible to do all you propose, or would it be worth while to alter the present system to the extent of having the character, conduct, and qualifications upon a separate document?—I think it would be better to have it in the same document.

1046. Therefore you think the thing had better not be touched unless it is done thoroughly by legislation?—I think it would otherwise be a failure.

1047. One suggestion you made was that, after a seaman has been logged, a master should be fined for giving him a "V.G." discharge. Is not that rather taking away from the master the prerogative of mercy? If a man was logged a few days after sailing and reformed for the rest of the voyage, would you not leave it to the discretion of the master to give his final opinion of the man on discharging him, taking all the circumstances into consideration?—Quite so. I would not deface a seaman's register book for one fault. That would be unjust and uncalled for.

1048. If a man acted in a moment of temper, and was logged, you would like a later opportunity of forgiving him?—Yes, but I have known cases where men have acted in the most disgraceful manner and have been logged, and yet have got good discharges.

1049. I understand you to say that the present system of discharge is practically useless for the guidance of masters, and you don't think that the form adopted a few years ago by the Board of Trade was much better?—No, it has not been taken up.

1050. You think that there should be only one book containing a complete record, and that seamen should be forced to have it?—Yes.

1051. And that masters would not take men who had not got them?—At first they might have to do so, but they would be forced to do so only by the scarcity of men holding the books.

*Capt. S. R. Chandler.*

27 June 1899.

*Capt. S. R. Chander.* 1052. Setting aside cases of emergency, you think masters would see that seamen had these books?—That is my opinion.

27 June 1899. 1053. You said something about a man having a continuous record showing five or six years' service as an A.B. being associated on board with some men who were not really sailors; have you ever considered the question of rating and the condition that a man should not be entitled to the rating of an A.B. until he has served four years before the mast? There is nothing in the Act requiring a master to take a single A.B. in his ship?—The best proof of the utter failure of anything left optional is found in that.

1054. What is your opinion as regards rating; should it be left to the master entirely, with a proviso that a man should not be entitled to rating until after some period of service?—Yes.

1055. Do you think that any compulsory provision as to discharges should be accompanied by some compulsory provision as to rating?—Yes, so that a man must know his business before he gets a good discharge.

1056. Do you mean that, if he engaged as a fireman, he ought to be able to show that he is qualified for that post, and so if he is an ordinary seaman or an "A. B."?—Yes.

1057. I do not think I have any more questions to ask you, but I hope you will add anything you think necessary?—I don't know that there is anything else.

1058. We should be sorry if you left anything useful unsaid simply because it was not elicited by questions?—I think I have made it clear that one of the main reasons why I should like to see a compulsory and continuous discharge system brought into use is that it would tend towards the better keeping of discipline on board merchant vessels. Amongst firemen one sometimes gets very wild fellows, who simply defy the master, because after they leave the vessel he has absolutely no check upon them.

1059. You mean that they can get employment almost as easily without a character as with it?—Yes. The discharge in its present form has simply become a farce; but it would no doubt have been of much greater use than it is, or ever has been, if masters and officers of ships had only had the moral courage to enforce the carrying out of what no doubt was the intention of the founders of the system.

1050. In other words, if captains discharging crews had given men a true character, and if due regard had been paid to that true character in engaging seamen, things would have gone better?—Yes, much better.

1061. Does not that show how absolutely necessary it

is to secure the co-operation of masters in this matter in order to secure its success?—Yes, it must be so. I don't see how else you could do it except by rendering them liable to fines or imprisonment.

1062-3. A suggestion was made to us this morning that there might be an appeal to the Board of Trade by sailors dissatisfied with their character certificates, but I strongly deprecated any such proposal as impossible?—I think a line should be drawn in cases where good discharges are given to a man despite general bad entries in the log against him.

1064. Such cases only illustrate the necessity of masters conscientiously discharging the duty placed upon them?—When a master is so much inclined to forgiveness that his action becomes subversive of all order, there should be some check upon him.

1065. Don't you think that the character record should be treated as an expression of the opinion of the master who, after all, is most capable of judging?—That might be so, so far as capacity and ability are concerned, but conduct is not always a question of opinion; it is in most cases a question of fact. If a man grossly and habitually commits himself on board a vessel there cannot be much difference of opinion about it among the other persons on board.

1066. Surely in such a case he ought to have a bad discharge?—Yes; but so long as a seaman does anything like what is right, a master is usually reluctant to give any discharge that would be detrimental to the seaman.

1067. I am sure you will agree with me that in these days nothing ought to be done that would weaken the power or authority of the master of a vessel?—Certainly not.

1068. But you see no harm in associating his officers and some of his men with him in signing entries in the log?—Quite so; in order to stop any chance of venting spite.

1069. (*Mr. Clark Hall.*) Taking human nature as it is, do you think the use of continuous discharges would make masters more lenient as to giving "G" and "Decline"?—I hardly think they could be more lenient in that respect than at present.

1070. (*Mr. Howell.*) I gather your opinion to be that for one case in which a master is too severe there are twenty in which he is not severe enough?—Yes, a thousand.

1071. Is there anything else you would like to add?—I think not.

(*Mr. Howell.*) We are obliged to you for coming and giving us your evidence.

## FIFTH DAY.

Tuesday, 4th July, 1899.

PRESENT:

The Right Hon. The Earl of DUDLEY (*Chairman*).

Captain A. J. G. CHALMERS.

Mr. CLARK HALL.

Mr. W. J. HOWELL.

Mr. C. HIPWOOD, *Secretary*.

Captain WILLIAM HALL, master mariner, was called; and Examined.

*Capt. William Hall.*  
4 July 1899.

1072. (*Chairman.*) You have had considerable sea experience?—Yes.

1073. I understand you have been a master for forty years?—Yes, forty years, in steam and sail, in tramps and in Eastern traders, and also carrying mails on the China coast.

1074. What body do you represent here to-day?—The British shipmasters.

1075. Is that a society?—Yes, the shipmasters' and officers' federation.

1076. What societies does that federation comprise?—It comprises all the incorporated associations of ship-

masters and officers of the United Kingdom, viz., the Mercantile Marine Service Association, incorporated by Act of Parliament, the British Shipmasters' and Officers' Protection Society, the Shipmasters' Society, and the Scottish Shipmasters' Association, Limited, the three latter incorporated under the Companies Acts.

1077. The Merchant Service Guild is not represented in that federation, is it?—No.

1078. When a member of your federation comes to give evidence before a committee, how does he arrive at the views of the federation?—These are discussed at properly constituted meetings of the Executive Committees

of the various associations. Individual members are circularised upon all important questions, and the Executive Council of the federation finally condenses the opinions of the members into a concrete form.

1079. Then you have discussed the subject of continuous discharges in that way?—Yes, it is many years since all the associations dealt with this matter.

1080. Do you mean "many years ago"?—We have been discussing it for many years.

1081. Then, in saying that it is many years since you discussed it, you mean you have discussed it for many years?—Yes.

1082. You are sure, therefore, that the views you hold on that subject are the views of the federation?—Yes.

1083. And what are your views, and the views of the federation?—Absolute unanimity that continuous discharges are desirable.

1084. Your federation is unanimous?—Yes.

1085. That continuous discharges are desirable?—Yes.

1086. Have you considered the question solely with reference to the shipmasters and officers, or have you regarded also the probable view which the seamen and firemen would hold?—Shipmasters and officers are seamen, and many of them rise from the ranks. We have, therefore, considered the question from the general point of view.

1087. How does the federation represent the mercantile marine service?—Its membership of *bonâ fide* shipmasters and officers is between 8,000 and 9,000, chiefly shipmasters in active employment, and in possession of certificates of competency.

1088. You have been able to look at this matter from the seaman's point of view, as a good many of your members have themselves served as seamen?—Yes, a great many of them. Our association comprises a clear majority of the employed certificated shipmasters of the United Kingdom, and a fair proportion of employed mates.

1089-90. What advantages do you say the continuous discharge will secure as compared with the present system?—The enormous preponderance of short voyages, especially in steamers, has undoubtedly led to facility for personation; and it is not necessary to say that this plays directly into the hands of the crimp. Continuous discharges will prevent this.

1091. Will you explain to me how it is that that plays into the hands of the crimps. Do you suggest that the crimps sell the discharge certificates?—Yes.

1092. Do you mean that when a seaman gets a bad discharge certificate he tears it up, and gets another from a crimp?—That has very often been done.

1093. Are there any other ways in which you think the present system plays into the hands of the crimps?—I have myself at Port Said shipped a Greek sailor who had a certificate in the name of John Smith, stating that he was born in North Shields. The crimps are always on the look out for such men to get them shipped, but the continuous discharge certificate would almost bind its real owner to join his ship according to agreement.

1094. How would that be so?—He would not like to lose his discharge certificate.

1095. Do you mean that after he has signed on, the captain would take charge of the book certificate, and that the seaman would not see his book again until the end of the voyage?—Quite so.

1096. Unless he turned up and joined his ship he would lose his discharge book?—He would be liable to lose it, if he did not join. The discharge book could be sent ashore at the last moment along with the return which we have to send back just as we are sailing, and it would be left for the shipping master or the superintendent to decide whether he would hand it to the seaman afterwards or not.

1097. You contemplate that, whenever a seaman signs on, he should give his discharge book to the master of the vessel?—Yes.

1098. Are there any other advantages that you contemplate and foresee from the use of continuous discharge certificates?—They will form a protection to respectable seamen and firemen, and if properly framed they should be a deterrent to the loafer, the drunkard, the man who fails to join, the man who deserts, the man who malingers, the petty thief, and other dregs who drift into the merchant service under the present system.

1099. You have already told us how it would affect the

man who fails to join, but how would it be a deterrent to the loafer, amongst whom I suppose you would class the Greek whom you shipped at Port Said?—Yes, I would include him amongst the loafers.

1100. How would the continuous discharge system affect the drunkard. Do you think that it would show his bad character?—Yes, it would be liable to. I would not like to put a black mark against a man for having become the worse for drink once or so, but it would be different if he got drunk frequently.

1101. You think the continuous discharge system would protect you against deserters? I suppose you mean in the same way as in the case of the man who fails to turn up?—In the case of a deserter, the discharge would be handed over to the Consul if he were abroad, and the Consul could deal with that man if he came before him, or we could hand the discharge certificate over to the shipping office when the vessel returned home.

1102. You advocate the system of continuous discharges in the interests of respectable seamen of all grades, masters as well as men?—Certainly, the only object of a continuous discharge is to protect ships and good seamen from the bad residuum.

1103. It would protect masters from the danger of shipping bad seamen?—Yes. He would be able to see how the men had behaved on previous voyages. A man may have a bad certificate, intervening between two voyages, for both of which he may have happened to get a good discharge; when the man is looking for another ship, he will not show the bad discharge but may pretend that he was working on shore during that interval. I have met with such cases.

1104. Are your answers framed on the supposition that legislation will be required to give them effect?—No. Any legislation in the matter will probably only result in weakening the power to maintain discipline which is at present in the hands of the British shipmaster, and we distinctly decline to have that power weakened, or the responsibility of the British shipmaster lessened in any way.

1105. Why should legislation weaken discipline?—Under legislation the shipping masters and superintendents would probably take some of the power which the skipper has at present.

1106. When I talk of new legislation, I don't mean a new Merchant Shipping Act. If it required legislation to bring in a system of continuous discharges, why do you think that a small Bill to effect that would weaken discipline? I don't see that it has anything to do with discipline?—It might lessen the power of the captain over the log book and other things.

1107. I do not think you need have any fears of that sort. What form do you propose that the continuous discharge shall take?—It should be in such a form that it can be easily glanced over by the master or mate when picking a crew. It should contain a description of the holder, to prevent personation. It should contain columns, not only for voyage, but also for—(1) Conduct; (2) Ability; (3) Remarks.

1108. Do you not prefer a form of continuous discharge without columns for Conduct and Ability?—This matter has been fully and carefully discussed by us. We have examined the various forms of discharges issued by foreign Governments, by our own dependencies, by the Board of Trade at various times, by the Shipping Federation, and by the Registrar-General of Seamen to the Royal Naval Reserve, and we are strongly and unanimously of opinion that the continuous discharge should contain columns for Conduct and Ability, but with certain safeguards to protect the seamen.

1109. What, then, do you say the form of the Conduct and Ability columns should be?—We think that there should be three columns: one for Conduct, one for Ability, and one for Remarks. We think that the conduct and character columns should be filled up just as at present, except that in no case should the entry "Decline to report" be allowed unless the offence upon which it is based has been duly and properly entered in the official log.

1110. And you think that this is sufficient to protect ships from bad seamen, as well as to protect the rights of seamen?—Yes.

1111. Do you support the view that entries should be made on the continuous discharge of desertion, mutiny, or other statutory offences?—After most careful deliberation, we do not think that that is desirable.

Capt.  
William  
Hall.

4 July 1899.

*Capt.  
William  
Hall.*

4 July 1899.

1112. Why not?—When you come to make these entries in the discharges it sometimes causes ill-feeling.

1113. Do you think that it is desirable that the superintendents of mercantile marine offices should, in place of the master, be made responsible for entries of bad conduct on the continuous discharges?—Distinctly not. The seaman is the servant of the shipowner and shipmaster. He is in no sense whatever the servant of the Board of Trade, and the superintendent of a mercantile marine office, who is the servant of the Board of Trade, should not have his statutory powers carried beyond their present limits.

1114. What do you intend the column of remarks for?—Solely to record instances of gallantry, bravery, or exceptionally meritorious conduct on the part of the seamen. We think that such record would be highly valued by the seamen, and would help to make the continuous discharge popular among them.

1115. Have you any further suggestion to offer?—Yes. With a view to prevent "failures to join" and desertions, we suggest that immediately upon the seaman signing articles, his continuous discharge should be placed in the custody of the master, the master holding it until the discharge of the seaman. But (1) in the event of the seaman failing to join, the master should return the continuous discharge with the form containing changes in the crew; and (2) if the seaman deserts, the master should return the continuous discharge to the Registrar-General of Seamen, through the British shipping authority at the first possible port.

1116. You think that at the end of every voyage it should be compulsory to put a record of the seaman's conduct and ability upon the discharge form?—Yes.

1117. Don't you think there is a possibility there of tyranny, and that some masters might give a man a bad mark through having a spite against him?—I don't think so.

1118. Why not?—To speak from my own experience, masters are more likely, at the end of a voyage, to lean towards leniency than to be too severe.

1119. The V.G. certificate is rather too frequently given?—It is very often given.

1120. Don't you think that is because masters recognise that the present form of discharge is worth nothing at all; consequently they become somewhat careless as to what kind of discharge certificate they give, whereas if seamen had a continuous discharge book it would matter very much what kind of discharge certificates the master gave?—You should be able to trace up any master who gives a false discharge certificate.

1121. Who is going to do that? Do you mean that some kind of pressure should be put upon the master, or that there should be some kind of appeal?—If a man came to me with a continuous record, showing one bad discharge, I should ask the seaman the reason for the bad mark against him, and he might be able to explain it.

1122. If a seaman came to you whom you contemplated taking in your ship, and you found that he had a very bad discharge, and you asked him to explain it, and he explained that he was really an angel, and everything he ought to be, whereas his former master was everything he ought not to be, do you mean to say that you would accept that explanation against the character given to the seaman by his former master?—I am not saying I would accept it, because a bad character would make me cautious in engaging such a man.

1123. Quite so; would it not probably make you so cautious that you might not take him at all?—I would at the same time judge to some extent by appearance.

1124. If you are prepared to set aside a written character given by a previous master, and to form your own judgment from the seaman's appearance, why should you attach so much importance to the column in the certificate for recording his character and ability?—I do not say that I would judge altogether by his appearance, but if I found that the man had a bad character on one voyage, and that it was preceded and followed by voyages where he had a good character, I should endeavour to get an explanation, because there might be some special reason, and I would not condemn a seaman for one fault.

1125. Supposing that a seaman had a series of good characters, say from three to six good characters, and that his last character was a bad one, and he tried to explain it away by saying that the master had had a spite against him, and if such a man looked truthful, and appeared a good seaman, would you take him or not?—If I was pleased with his appearance I might take him.

1126. In spite of his bad marks?—I should make some inquiries before I took him.

1127. Given that a seaman is a smart looking fellow, and appears truthful, you do not think that the risk of a bad mark put against him through spite would prevent him afterwards getting a ship?—I don't think so; not in all cases, but it might in some.

1128. If it might in some cases, don't you think it is rather unfair to put even some men into that position?—I don't think it would have the effect of preventing them getting any employment at all.

1129. Why? Do you mean because there are too few men?—There is often a scarcity.

1130. Is the scarcity so great that you have often to take a man no matter what he is?—It is not so much a scarcity, as that men who have signed fail to join at the last moment, and the captain then is often glad to take anyone to make up his crew.

1131. How would it suit if there were no columns at all for conduct or ability, and if the discharge certificate were a mere record of service, upon the back of which the seaman could, if he wished it, have stamped a record of his conduct, so that it would be left to him to say whether he would take a conduct mark or not. If he preferred not to take any record of conduct, would that make you suspicious, just as if he had a bad record?—Yes, I should feel suspicious if there was space at the back of the certificate expressly for a record of character, and if the seaman refused to accept it.

1132. The good men would all ask for it, and would have the record?—Yes.

1133. And the bad men instead of having a bad mark would have no mark at all?—Yes.

1134. Would not that be just as great a safeguard to the master as a compulsory record of character?—It would have almost the same meaning.

1135. Therefore, it would satisfy you if the custom was to leave it optional to stamp the character upon the back of the certificate when the seaman desired it?—Yes, that would satisfy me.

1136. (*Mr. Clark Hall.*) I think your association is distinctly opposed to the entry of desertion by the captain on a continuous discharge?—Yes.

1137. When a seaman is engaged before a superintendent, would you propose that the superintendent should enter the engagement on the discharge book?—Yes.

1138. Then if the man deserted, you propose that the master should make no entry in the book, but should return the book to the superintendent?—Yes.

1139. Then there would be blanks in that book?—Yes.

1140. Do you propose that these should be left blank or would you leave it to the registrar to fill them up as instances of desertion?—I would leave it to the registrar.

1141. You would not leave it blank altogether?—I don't think that would be policy.

1142. So that there would be an entry of desertion in the discharge book, but the master would not make it?—Yes.

1143. Supposing a seaman is discharged, and is either G. or V.G., would you draw a distinction between these two descriptions?—Sometimes when a seaman is an extra good steersman we give him a V.G., or if he is especially careful on the look-out, whilst good men who conduct themselves well during the voyage, and yet can scarcely be called thorough seamen, although they may be willing workers, would be discharged with a G.

1144. Is it not a fact that in the Royal Navy and merchant service a G. is looked upon as pretty much the same as bad?—In some cases it is viewed in that way.

1145. (*Chairman.*) In contradistinction to V.G., I suppose you would treat "good" in the ordinary meaning of the word, would you not?—A seaman with V.G. is usually preferred.

1146. Good may mean an excellent man, but not so good as V.G.?—Yes, not so good as very good.

1147. (*Mr. Clark Hall.*) In the column you suggest for remarks, would you not note the fact that a particular man was a good helmsman, or anything of that kind?—Yes, if I had a very good helmsman, or a man who could be depended upon on a dark night for keeping an extra good look-out, and not being careless, I should always make a point of mentioning that in his discharge.

Capt.  
William  
Hall.

4 July 1899.

1148. And it is for such entries that you would keep the remarks column?—Yes.

1149. (Chairman.) Would you put such a remark as this in that column: "I should have had much pleasure in giving this man a V.G. discharge had I found him a little more experienced"?—Yes.

1150. That could be stated as the reason for simply giving him a G. discharge?—That could be stated quite easily.

1151. Such a note would explain the G. discharge, and would fill up your remarks column?—Yes.

1152. (Mr. Clark Hall.) You spoke of crimps being baulked by means of a continuous discharge, but as such a discharge would become a valuable property, might not a seaman be induced to part with it to the crimp and to apply for another, so that the crimp might hand it over afterwards, upon terms, to any loafer whom he wanted to get shipped, and who might answer, more or less, to the description. Is there not some danger of that?—I don't think there would be much danger of that. The seaman would have great difficulty in getting a second book.

1153. But if he *bonâ fide* lost his book he would be entitled to another?—Yes, but if his first book turned up in a shipping office, or if the certificates were traced, it would be awkward for him.

1154. (Captain Chalmers.) Is it your practice now, when engaging seamen, to make them hand their discharges to you?—Invariably.

1155. And you retain them for the rest of the voyage?—I retain them until we are on the homeward passage, and then I prepare a list of all monies paid or owing to the seaman, and such other matters, on a slip of paper, so that he has leisure to look it over before he arrives home, and at the same time I hand over his discharge to him. That is the rule I have acted upon.

1156. You don't do that until you have passed your last port of call?—Yes, quite so, or when we are coming into the Channel.

1157. Is that practice general amongst shipmasters?—I could not say, but I have tried to spread it amongst shipmasters.

1158. If a man fails to join, do you send his discharge back with the Eng. 2?—Yes, to the shipping master, so that the shipping master would have it in his hand, and could ask for an explanation if the seaman went to him for the purpose of shipping with someone else.

1159. Why do you hold that a certificate of discharge should contain a report on character, and remarks?—We would have nothing to guide us if there was nothing of that sort, and we want to be enabled to judge whether a man is well qualified or not.

1160. Are you not aware that the certificate of discharge is simply what it purports to be, namely a certificate of discharge, nothing more and nothing less?—Yes, but in that certificate there are spaces left for some brief record of what the seaman's character has been during the voyage.

1161. Have you hitherto considered that you could fill up these discs as you liked in the present form, without asking the seaman whether he wanted them filled up?—I have considered that.

1162. Your opinion was that the seaman had not the option?—I should have said that if he came and mentioned to me that he did not want a character, it would be left with me whether to fill up the blanks or not.

1163. Has it been your practice, in making out the discharges, or having them made out by the shipping office officials, to direct them to be filled up in the discs from the report written in the official log before the seaman comes up to the pay table?—Yes.

1164. So that practically you did not give the seaman an option?—They never thought of asking or taking the option. The form has generally been filled in from the report in the log book, with either V.G. or G., before the seamen go to the shipping office.

1165. Do you think the seamen don't know that they have the option of choosing whether these discs should be filled up or not?—I don't think they do.

1166. And that really, when they come to the pay table to receive their wages and their discharge, they take the discharge with "decline" on it, or with other indications of character, not knowing that they could refuse such record of character?—I don't think they know that they have that option.

1167. Did you know?—Until you mentioned it this

morning, I had quite forgotten it, but I once had a case where a man refused.

1168. Do you hold that the seamen should still have the option, or that it should be taken away from them?—I think they should still have the option.

1169. If they are still to have the option, do you think that the certificate of discharge should bear upon it any column for a report on character?—I think the column ought to be there for the report on character, but if the seaman strongly objected to have it, it would soon be understood among ourselves that there was some hitch in that seaman's behaviour, to account for his reluctance to have a record of character.

1170. Supposing that the certificate of discharge bore upon its face simply the name and description of the man, with service, date of engagement, rating, etc., and that the back of the page was left blank, so as to have stamped upon it with an india-rubber stamp, if desired, a report of character or left blank at the seaman's option, would not that meet the case?—Yes, I think so.

1171. If you were engaging seamen, and a man handed you his book, and you found it consistently blank as to character, showing that the man had not accepted a record of character at all, would that influence you against engaging him?—It would tend to. I would think that there was some reason for his refusing to accept a record of his character.

1172. Would you refuse to take him if other men were standing by who had their certificates filled in with V.G.?—I might do so, but I would not like to say positively that I would.

1173. Would a single bad discharge prevent you from shipping a man?—No, because I have had experience that a seaman might lose his temper under certain circumstances, on board a ship, and on the impulse of the moment, that may be put down against him, or may cause a blank, or only a G, when he would otherwise have got a V.G. I would, therefore, not condemn a man for one fault.

1174. Do you think, if the suggested form were adopted, and the back of the form were left blank for an optional record of character, that either that record, or the absence of it, would be some indication of the man's character, and would your Association not ask for anything else?—I don't think they would.

1175. They would not press for the ruled columns?—I don't think they would, under such circumstances.

1176. I think you said that if a master wanted to decline to give a report on character, there should be power given to the superintendent to forbid him to do that, unless there was an entry in the official log book for some offence. Do you still hold to that view?—I think it might not be just for a master to decline to give a man some kind of character unless there was some specific and recorded fault to be found with the seaman.

1177. Have you not had experience at sea of men who were idle and worthless, but who yet do not commit any specific offence that you can put down in the log book—men who are from beginning to end disobedient or idle, and yet keep within the line which prevents an entry in the log book?—Yes.

1178. Then why should the master be forbidden to give a "decline" to report, unless there is some corresponding entry of an offence in the log book?—The captain should have the liberty to decline or not, but not many captains would decline to report, unless the man had been persistently troublesome.

1179. You led us to understand that "decline" to report should not be allowed unless there was an entry in the log book to justify it. Who would have the power to step in and prevent it but the superintendent?—He might step in.

1180. Does not the condition of affairs equalise itself when you have, on the one side, a master who has the power to decline to report, and when, on the other side, you have a seaman who has the option of taking no character at all, and having nothing endorsed on his discharge certificate, because if he found that the master was going to decline to report, he could refuse to take it?—I have known men refuse to take a discharge at all, but in such a case they lose credit for the period of service covered by their engagement in that ship.

1181. Do you think your association would agree to put it out as an instruction to all their members that they were, in every case, to demand the seaman's book at the time of engagement?—I think so.

*Capt.  
William  
Hall.*

4 July 1899.

1182. Do you realise that under the present Merchant Shipping Act, there is no power on the part of the superintendent to demand the last discharge?—I was not aware of that.

1183. Did you think the superintendent had that power?—I always thought so.

1184. You may take it from me that he has not. Now, knowing that, don't you recognise that the success, or at least a great part of the success, of the proposed scheme of continuous discharges would depend upon the co-operation of the shipmasters, and upon their refusing to engage any man who did not produce his book. Would the masters co-operate in that?—I think so.

1185. Do you think they would in all cases—in cases of emergency, such as pier-head jumpers and the engagement of substitutes?—In cases like that they would be almost compelled to take the men who offered, but a system of continuous discharges would make it more likely that a man, after being entered for an engagement, would join the ship.

1186. You think that if a continuous form were in force, and if the seaman knew that his discharge was in the possession of the master, there would be fewer cases in which it was necessary to engage substitutes?—I don't think we would have anything like the number of cases that we have at present, but there might be some chance ones.

1187. In the case of engaging substitutes, so as to catch a tide, would some masters take men at the last moment without demanding their books?—To save a tide they might be compelled to do so.

1188. But if you once allow an exception, would not that destroy the rule?—The new system would take a little working in at first before it became universal amongst sailors, but it is greatly needed.

1189. You think we could depend upon the masters doing all they could to assist this scheme?—I think so. We have had the subject thoroughly threshed out in our societies, separately and jointly.

(Chairman.) We are obliged for your evidence.

*Capt. John  
Carrington.*

Captain JOHN CARRINGTON, called; and Examined.

1190. (Chairman.) You have been a master for a number of years—about twenty years, I think?—Yes, I have held a master's certificate since 1873, and have been in command of sailing ships and steamers since 1876.

1191. You represent the Mercantile Marine Service Association?—Yes.

1192. I understand that body represents nearly three thousand shipmasters and officers?—Yes.

1193. I understand you are prepared to give us a statement of the views of your society and yourself upon the subject of continuous discharges for seamen?—Yes. The Council of the Association is of opinion that a system of continuous discharge certificates should be adopted in the Merchant Service, and that these certificates should be in such a form as could easily be glanced over by the master or mate in selecting a crew. It should contain a description of the holder to prevent personation. It should also contain (1) a column for conduct; (2) a column for ability; (3) a column for remarks. The master of the ship should have full discretion in giving a character to a seaman, as unless this is provided for, the continuous discharge will lose half its value, because it is essential that a master or mate should know the character of a seaman before shipping him. I know that there is an objection in official quarters against allowing the master this discretion, on the ground that the master, in a fit of temper, might, undeservedly, give a man a bad discharge. This we strongly deny. Shipmasters are more inclined to err on the side of leniency, as witnessed in the well-known fact that a large number of seamen are at present given V.G. discharges upon signing off, when their conduct during the voyage has been far from satisfactory. This I attribute to the fact that shipmasters generally are over considerate of the seaman's interest, and are averse to giving a bad discharge because they do not want to jeopardise the seaman's chance of obtaining future employment. The shipmaster, as a rule, is very cautious in giving a bad discharge. In the case of continuous discharges he would take care that no bad character is given unless the conduct is certified by the entries in the official log, signed by himself and the officers, showing that the man has been guilty of such offences as confirmed drunkenness, mutiny, desertion, or other statutory offences. As a further precaution, instructions might be printed in the discharge book cautioning shipmasters that a bad discharge must not be given unless supported by the evidence of the official log. But the shipmaster should still have the option of declining to report, or offering "no remarks," in the column for conduct. I do not consider that one bad discharge in a book of continuous record would be fatal to the chances of future employment. If a man's record previously has been fairly good, most shipmasters would, I think, be disposed to give him another chance; at any rate, a man's average conduct during a course of years would have more weight than one unfortunate lapse. The advantages of a system of continuous discharges are fully recognised among shipmasters and officers. The present system of single discharges readily lends itself to personation. I have had considerable experience in the San Francisco and West Coast of South America trade, and I have known of cases in San Francisco where the boarding-house masters have fitted out a nondescript crew of landmen

with good discharges taken from seamen, and supplied these men to a ship signing on. A compulsory system of continuous discharges would remedy many of these evils. The form adopted might be an adaptation of that used in the Navy, or an improvement upon that authorised by the Government of India for Lascar seamen. To make the record more effective, I would suggest that an entry should be made immediately upon the seaman signing articles, and that the book should remain in the custody of the master until the vessel had sailed on the outward voyage. My object in suggesting this is that it would have the effect of checking many of those numerous desertions, or "failures to join," after signing articles. The book could be left in the possession of the Board of Trade officer after the seaman had failed to join, and the Superintendent would then be in a position to more readily trace the offender. It is an almost daily occurrence for vessels to be detained through their complement of seamen not being full at the last moment, thereby incurring a great expense upon the owners. Many seamen sign on a ship's articles simply to obtain their advance notes, and after getting someone to cash them they clear out to some other shipping port, and do the same again. The continuous discharge would be a means of putting an end to much of this and many other frauds.

1194. You think that the master of a ship ought to have full discretion in giving a character to a seaman?—I should say so.

1195. What do you mean by full discretion? Do you mean that if a master insists upon giving a seaman a bad character, the seaman has to accept that, whether he likes it or not?—Yes; if a master feels that a man deserves a bad character, he has every right to give him one.

1196. And the men should be obliged to accept it?—Yes.

1197. I suppose you know that is not the present state of the law?—I know that.

1198. You would, therefore, change the law?—Upon that point I would.

1199. Probably you know that at the present time it is within the option of the seaman not to take a bad character unless he likes?—I know that when he takes his discharge from the hands of the master at the payable he can destroy or keep it, as he likes.

1200. I don't mean that. I mean that he need not accept a V.G., or a G., or a "decline" to report at all. He need not have the discs filled up unless he likes?—Then I would decline to report upon his character.

1201. He need not have that. I believe that at present seamen do not know it, but there is no reason why they should accept any remarks about their conduct and ability, as they can merely ask for their discharge?—In other words a seaman can ask for a certificate simply as a record of time of service.

1202. That is so. Did you know that fact?—I was not myself aware of it.

1203. Of course, the object of your suggestion is to provide some security that when a seaman comes and applies for a ship the captain may be able to form a judgment from the man's previous record?—Yes.

1204. Would not your point be sufficiently met if the continuous discharges merely showed sea service, and then still allowed every seaman the option which he has at present of taking a record of his character and ability on the back of the discharge, or of not taking it, as he liked?—That would not show his character.

1205. But the good seamen would naturally all take a record of conduct and ability, and would have their discharge certificates duly endorsed, whereas the bad men would probably refuse to take it, and that would be in itself sufficient warning to the master that there was something wrong?—Quite so; if the character was not endorsed, I should conclude the reason to be that it was an indifferent one.

1206. Would not that meet your point?—I think so.

1207. Therefore, there would be no reason to change the law, and to bring in a compulsory measure to force every seaman to take a character?—The continuous form of discharge would enable a man to show his past record of sea experience. All those who have anything to do with shipping crews know that the majority of sailors are a very rough lot to deal with, and perhaps especially English sailors. The sailor is probably a man who has tried most things on shore, and gone to sea as a last resource, or he may have been a boy so thoroughly bad at home that his parents have sent him to sea. That is the class of material we have to work with. Masters are put to a great deal of trouble to manage such crews. I have had charge of vessels from a schooner to a four-masted sailing ship, and several mail steamers on the West Coast of South America, and I have found that the foreign sailor is easier to deal with than the English sailor, so we have to give him a preference. The Scandinavians, for instance, are hardy, good seamen, and more amenable to discipline; but, of course, we would rather give our own countrymen the preference if we had sufficient law to back us up in making them behave themselves. At present if you threaten a seaman, if you call him aft, and tell him that he has been insolent, he knows that you cannot by law punish him for that, and that he must strike an officer before he can be punished. It is very *infra dig.* for any young fellow in charge of a watch to have some of the crew giving insolence, but he knows that he has no way of getting them punished by law. We may be away four or five months in a sailing ship, and the crew find that by sticking behind one old sea lawyer they can have pretty well their own way, and do as they like, and work just as little as they wish. If an officer speaks to them of their lack of interest in their work, they give him a lot of insolence, and it is no use a master trying to punish these men, for there is no law enabling him to do so. If we had a discharge form by which a captain or officer could see the past record of a man, the seamen would feel that unless they behaved themselves and got good discharges—at all events occasionally—they would stand a bad chance in competing with other men who were also applying for a berth.

1208. I don't suppose that in a case of that sort you would have any power under the system which I have sketched for you of doing anything more than leaving the back of the certificate of discharge blank, because if you proposed to write on the back of it that the man had been consistently insolent or consistently lazy, the seaman would, of course, decline to have that. You would, therefore, be unable to actually express your views about the man on his discharge. At the same time, if the shipmasters co-operated sufficiently, I don't think there really would be any necessity for that, because the very fact that a seaman had the back of his certificate man?—Certainly, if a blank was left under such circumstances at the back of the discharge a captain would come to the conclusion that there was something against the seaman.

1209. Unless the man also had a number of good discharges?—Quite so.

1210. I presume you would rather have a system of that kind, which could be easily brought about, and which could be given effect to without the delay and trouble that always attend the introduction and passing of a new Bill?—Yes.

1211. Then probably you would not press for the suggested columns for a compulsory record of character and ability?—No, I think I would not under these circumstances.

1212. You said that a shipmaster would be very cautious in giving a bad discharge under a continuous discharge system, that he would take care not to give a bad character unless it were justified by

entries in the log. Would the master also be careful, on the other hand, that he does not give a good character unless it is deserved? I am quite certain that every reasonable man would be careful not to brand a seaman with a bad character which he did not deserve, but is it not true that many masters give V.G. discharges when men do not deserve them?—Yes, that is done.

1213. Do you think under a system such as is proposed that shipmasters would have the courage of their opinion, and would decline to give a seaman a V.G. discharge if he really did not deserve it?—I think if a master felt that a troublesome seaman had tried to mend his ways, if he had been antagonistic to the officers in the first part of the voyage, and had afterwards shown that he wished to be a better character, and to serve the ship in a more manly fashion, I think the master would be inclined to give the man a V.G.

1214. Would you give a V.G. under such circumstances?—I might if I thought the man had made up his mind to do well, and had shown himself, during the latter part of the voyage, determined to be what I considered a very good seaman.

1215. If you gave a V.G. to a man who has had any thing against him on the voyage, would that not be rather unfair to other men who had had nothing against them on the voyage?—I consider that if a man, after trying to get a little bit of his own way to start with, had mended his ways, and shown himself to be very good, that I should be in form in giving such a man a V.G. at the end of the voyage.

1216. What is the real reason why V.G. discharges are now given with so liberal a hand to many men who don't really deserve them?—I could not say.

1217. Have you never thought about it, because I suppose that more than half the discharges now given are V.G. discharges?—Yes.

1218. Why is that?—I consider that the masters give them because they think the men have tried their best. When even a troublesome man finds himself in a ship where discipline is maintained, he may settle down to his work, and behave himself, and deserve a good discharge.

1219. Don't you think that V.G. discharges are more commonly given because the captain, at the end of a voyage does not want to part enemies with the sailor, and prefers to let him go in peace?—I should say not. I would not take that into consideration in the slightest degree.

1220. Do you believe that in every case where a V.G. discharge is given the master really thinks that the seaman is trying his best to make amends, and to do well?—I would not say in every case.

1221. In the majority of cases?—In the majority of cases I think that a captain, before giving a V.G. discharge, feels that the man ought to have it.

1222. Then I think you must have been very successful in dealing with the rough material you spoke of?—I think I have.

1223. I don't mean you, but shipmasters as a whole. Do you think the shipmasters realise that the success of a scheme of continuous discharges would absolutely depend upon them, because obviously if they are careless about the kind of characters they give, the whole advantage of the continuous form is done away with at once?—I consider that if masters, taken as a body, saw that the continuous discharges were given with the object of really enabling them or their officers to select the best men, they would be more inclined to be exceedingly careful in giving really just characters.

1224. You think they would be impressed with a sense of their individual responsibility in a general scheme?—I do.

1225. (Mr. Clark Hall.) You propose that the master should retain the continuous discharges until the ship has sailed?—Exactly.

1226. Would you not rather require him to retain the continuous discharge until the man is discharged, in order that the proper entries might be made?—The certificates of the officers might also be retained till the ship has sailed; at the present time they consider that they are the best people to take care of their own certificates.

1227. But I am speaking rather of the A.B.?—If a man's book were given to him when the ship sails he would probably be able to take care of it as well as if it were put into a drawer in the captain's cabin, and in case of shipwreck the seaman would not want to have his re-

cord lost, if he could keep it in his pocket when he is rescued in a boat. It would be a valuable possession to him if it were a good record.

1228. As a matter of fact, masters usually do retain the discharges?—Yes, I do, until I am discharging the men, or until shortly before that time.

1229. With regard to the form to be used, have you thought whether a sheet would be better than a book?—I think a book would be preferable.

1230. (*Captain Chalmers.*) With regard to the officer's certificate, are you aware that under the Act the master has power to retain it until the officer is discharged?—I am aware of that, but I have had officers who do not favour that, and the shipping master has said to me that if we get the number of the certificate that is sufficient, as the officer is the best one to take care of his own certificate.

1231. The superintendent has told you that?—Yes.

1232. Knowing that under the Act you can retain them, do you retain them?—I do.

1233. You think the certificates should be retained until the discharge?—Yes.

1234. If a continuous form came into operation, would you demand it at the time of engagement and keep it during the voyage?—Yes, if I could legally do so.

1235. Would all shipmasters co-operate in that way, by refusing to take a single man who did not produce his book?—I should say so, if the supply were equal to the demand; but there are some ports where we cannot easily get men of the best character, or at least not sufficient of them, and where we are obliged to take those who offer. Personally, I would not take a single man who had not a good discharge.

1236-7. I am talking about the production of a book

form, the leaves of which might be blank on the back. Would the shipmasters undertake, at the time of engagement, to demand the production of the book from each man?—Yes, and to hold it during the voyage.

1238. Do you think they would assist the scheme to that extent?—Yes.

1239. Do you know whether there are in the Royal Navy discharges any reports on conduct, character and ability?—I do not.

1240. But I understood you spoke of the Royal Navy form as being a good one?—The last form of theirs which I saw gave some indication of conduct and ability.

1241. Do you still seriously think that a bad discharge should not be given to a man unless it is supported by entries in the official log?—I think most certainly that a seaman should not have a bad discharge unless he has committed himself, and been logged for an offence.

1242. Is it not possible at sea to have an idle, disobedient or worthless man who keeps inside the four corners of the law, and does not commit himself to such an extent that you could make an entry against him in the log book?—In such a case the captain might decline to give him any report on his conduct.

1243. You do not mean that there should be an addition to the Act or anything of that sort, preventing a master from giving a bad discharge?—Oh no, I think it should be left to the discretion of the master.

1244. But you think that shipmasters should be advised not to give a bad character unless there was some justifying entry in the log book?—I do not think that such advice is necessary, but they might be cautioned. That might do some good, and could not do any harm.

(*Chairman.*) We are much obliged to you for your evidence.

Captain W. KENNETH PRITCHARD, called; and Examined.

*Capt. W. Kenneth Pritchard.*

4 July 1899.

1245. (*Chairman.*) Have you been connected with the sea for a long time?—Yes, about twenty-five years.

1246. And you have been a master for a long time?—Yes, about thirteen years.

1247. And you are a member of the Shipmasters' Society?—Yes, but I appear here independently.

1248. Are you in favour of a system of continuous discharges?—Yes.

1249. What advantages do you think that would have over the present system?—Under the present system we have a very poor guarantee that the man who presents a certificate of discharge to us is the real owner of it. In picking out a crew we have great difficulty, under the present system, in knowing whether we are getting good men. The present form is easily lost, easily lent, and the fraudulent use of it is also easy.

1250. What proportion of these discharges issued now are bogus, in your opinion?—The discharge itself is not bogus, but often it belongs to another man than the one who presents it.

1251. How often?—I cannot say, but a foreign seaman, who cannot speak a word of English, may produce two or three different certificates of discharge in different names.

1252. Does that occur often. I suppose it doesn't happen every time you sign on a crew?—I think there would scarcely be any occasion of that sort when it would not occur, especially when we take the pier-head men into account.

1253. The jumper who takes the place of the one who has not turned up?—Yes.

1254. Do you mean that almost every time you sign on a crew you have reason to doubt the genuineness of some of the discharges?—Yes.

1255. Where do they get them from?—I think a good many of the discharges really belong to foreigners who have gone home, after they have been some time in English ships, and who leave all their discharges with the boarding house masters. They are not returned to the registrar of shipping as they should be.

1256. Does the boarding house master usually have a stock?—Yes, only yesterday I found a boarding house master with fifteen, one of which, singularly enough, I had given myself in 1891.

1257. As the foreign seamen are generally the steadiest,

I assume that the discharge certificates of foreign seamen are those most in request?—Foreign seamen are certainly steadiest, at least some of them, but I know that masters very seldom give a bad discharge; it is too much trouble for them.

1258. One witness has told us that he believes the reason why so many V.G. discharges are given is that the masters are genuinely under the impression that the men, if they had been troublesome, wished to amend their ways and deserved the V.G., and the same witness told us that if a man misbehaved himself on the voyage and afterwards showed signs of repentance he would give him a V.G. on discharge. Don't you think it much more likely that the reason for giving so very many V.G. certificates is that the majority of masters don't want to part enemies with the men?—There are many things which conduce to that. My experience has been largely in what is called the tramp service or independent steamers. We may come into Cardiff on a Friday and have to clear out on the Saturday. If you have had any trouble with a man and want to record his case, it may take up all your Saturday, and consequently, instead of bothering about it, you give him a good discharge, and let him go.

1259. If you decline to report or give him a bad character, and he objects, or you have an argument with him, that may delay you?—Yes.

1260. Do you think that under a continuous system that may be changed, and that masters would be more careful?—I think that under those circumstances a seaman would not so readily part with his book to another man.

1261. But would the master be more careful as to what kind of a discharge he gave?—If the man was decidedly a bad character, and the master felt bound to give him a bad discharge, he would know that by giving such a man that discharge certificate he was really inflicting some punishment upon him.

1262. You think one of the reasons why V.G. is given so freely is that masters recognise that the present certificate is worth nothing, and that if it were bound up in a book form and made continuous, it would be worth something, and responsibility would then lie upon the captain to give the seaman a proper and true discharge?—I think so.

1263. Is it not obvious that, if they do not do this the value of continuous discharges will be seriously dis-

counted?—If a continuous discharge does not give some indication of ability and conduct it will be of comparatively little use.

1264. At all events, if V.G. were given when it was not deserved, the safeguard to the next master employing the man would be gone; but you think, I understand, that the point is recognised by the masters?—At present the majority of us don't consider that the V.G. certificate means very much in every case.

1265. Do you think it would be more considered under a continuous system?—Yes.

1266. And now about the form of the discharge. I see you would like to have columns showing a record of conduct and ability and remarks?—Yes; a strong, handy book form is probably the best.

1267. With regard to the columns you suggested, they would, of course, mean, if filled up, that you would be forcing a seaman to accept a statement about his conduct and ability and character, whether he liked it or not?—In the form used during the last eight or nine years there is a printed line which says that the seaman may object to any character. The expression is that if the seaman objects to a certificate of his character, a cross should be put through the disc.

1268. If the column for character was left, do I understand that you would make it compulsory, or leave it optional, as it is now?—I am afraid you would have to leave it optional. If you did not, it might involve legislation.

1269. And such a change would probably be resisted by the seamen?—I have never yet met with a seaman who was aware that he had the option, not even amongst the officers.

1270. Perhaps, if they were aware many more would object to the character?—I have had a man tear his character up and throw it back in my face.

1271. But he would not tear it up and throw it back in your face if he were aware that he need not have a bad mark at all?—Probably not; he would then say, "I want no character."

1272. You think that under a continuous system you would leave the character optional, as it is now?—Yes, although it would give us, as masters, infinitely more trouble, because we would have to fill in the discharges at the pay table.

1273. You recognise that the other plan would entail legislation, and might entail agitation?—It might.

1274. Suppose that in a continuous form you did away with those discs, which, as a matter of fact, are not altogether regular now, and treated the certificate as a mere record of service, and left the back blank, allowing any seaman to choose whether or not he would have his character and conduct endorsed on the back of his certificate or not. I should have thought—but I want your opinion upon it—that the good men would naturally seize the opportunity of having a record of their good conduct placed in the book, whilst the bad men would avoid it; that in itself would be a sufficient warning to masters, for if a man could not produce his certificate with a good character endorsed on it, the failure to produce such a certificate of character would alone be so suspicious a circumstance as to put the master on his guard?—Yes, that is so. If a man has a good record, with only one blank, or one "decline," you can ask him, under a continuous system, why that is, which gives him a chance of explaining, and the man, after giving an explanation, could point to his otherwise good record.

1275. Do you think that the fact of a man having a blank and no record of conduct would, in itself, be sufficient warning to a master, without the character column. If that were arranged, would you press your point about the compulsory character column?—I think not, but the discharge should be one that the master could easily pick up and refer to. A small book, like the Federation book, is almost big enough for the purpose.

1276. Is our optional book too bulky?—It is, perhaps, rather bulky.

1277. But there is very little difference in size between that and the Federation book?—Voyages are now so short that discharges accumulate quickly, and the seamen might very soon make up a volume of them.

1278. At any rate, you think that the form ought to be continuous, and in as handy a shape as possible?—Yes. When one is selecting a crew, they all crowd forward with their books, and one has to judge their character very quickly.

1279. I suppose you would be of opinion that when a captain signed on a man, he should keep that man's book in his possession, and give it to him towards the end of the voyage?—Yes, we do that now with the discharges.

1280. But I suppose that is very little security now?—Not very much, because the man can easily get another discharge.

1281. If a man deserts or does not turn up and join the vessel, he could account for the interval by pretending that he had not been at sea, but had been working ashore during the period?—He could make an excuse; the discharges are often, I think, destroyed.

1282. But you think that if they were in book form they would be kept?—Yes.

1283. If a seaman did not turn up to join his ship, you would return his book?—Yes, I would send it back to the Mercantile Marine Office.

1284. If a man deserted abroad, what would you do with the book?—Deliver it up to the consul.

1285. You think that would be better than bringing it back to the port of departure?—Yes, unless the steamer were coming directly back; the certificate might come home sooner if left with the consul.

1286. A witness was asked, the other day, if the books were sent straight home, whether that might not cause the deserter to be brought back at the public expense as a distressed seaman?—It might give the consul some opportunity of identifying him; the man would get home in a reasonable time, and could apply at the Board of Trade for another book.

1287. (Captain Chalmers.) At present, when you are engaging men, do you insist upon the production of their discharges?—Yes.

1288. You won't engage men unless they produce their discharges?—No, we always take their discharges.

1289. If the book form came into force, would you, when engaging a crew, refuse to engage any man who did not, or could not, produce his book?—Yes.

1290. Are you speaking now for the Shipmasters' Society, and do you think that shipmasters generally would undertake to do that?—I am only speaking for myself. Even in the case of the present discharge, we take it, so far as it goes, as a deterrent to keep the men from deserting or failing to join. Now that voyages are so very short, a seaman in the Mediterranean trade gets a discharge every six weeks or so, and if one voyage was unaccounted for, it would be easy for him to say he had been on shore six weeks. We want some guarantee that the men who apply to us are of good character.

1291. (Chairman.) You don't think that the masters would get slack, and would ship men of an inferior class in their ships, whether these men had books or not?—I think not. Masters in the tramp service are very careful, at present, about getting good men.

1292. Is that so in every class of trade?—In the Mail Service it goes without saying that they have a good class of men, for it is regular employment.

1293. Is it the tramp service that has to deal with the rougher class of seamen?—Yes, that is so; the ships themselves are quite as comfortable, but the men don't always know where they are going to or how long they are to be away, and we are often much pressed for time in collecting a crew.

1294. (Captain Chalmers.) Would you insist upon the production of books upon the engagement of substitutes?—Yes, I would; but if it was a case of possibly losing a tide, we might have to do without.

1295. Don't you think there would be a great deal of mischief in that, as it would not then be an absolute rule that a man must produce his book, because if you make one or two exceptions and break a rule, it all becomes of no effect?—It would only be in the case of pier-head jumping, when the vessel was ready to start, and when a captain must take someone at once from the shore; but if the continuous discharge system came into general use, good men waiting for an odd chance of employment would have their books with them.

1296. Did I understand you to say that a bad character or "decline" should not be given to a man unless there is an entry in the official log?—Not unless there is an entry to justify the character.

1297. But surely you would not take away from a master his power to decline to give a character to a very indifferent man, who may yet not have offended in such

Capt.  
W. Kenneth  
Pritchard.  
4 July 1899.

*Capt.  
W. Kenneth  
Pritchard.*

4 July 1899.

a degree as to warrant an entry in the log book?—Then I should give such a man a good discharge. Masters, as a rule, err on the side of leniency, and they don't give bad discharges as often as they should. Unless a man has been more than once in the log book, a master would seldom give him a bad discharge.

1298. But you recognise that only serious offences are logged?—Drunkenness may be logged.

1299. But is not that a serious offence?—Yes, especially when it is recurrent. And disobedience may be logged. At the present time we have to put entries in the log book to safeguard ourselves, and not to do the seamen damage.

1300. Is it not the fact that in a well-disciplined ship one sign of that good discipline is the absence of entries in the official log, and is it not in the ill-disciplined ship that you get the log loaded with entries from beginning to end?—No, my experience is, that in ships where the log book is filled with entries, they generally refer to one or two members of the crew, bad eggs, and not that the discipline of the ship is bad. I am not disposed to make entries except in bad cases, but some men are so ill-disposed that the entries have little effect.

1301. Don't you think that there are any offences which deserve a bad character, except those which warrant an entry in the log?—Yes, but to safeguard a man you must have his bad behaviour proved before you give him a bad character.

1302. Supposing you have a man who takes about twenty minutes in relieving the wheel, and who cannot be roused for his work, but requires too long a time to collect his senses, and then comes loafing in late, and carries that conduct all through, whether he is ordered for look-out duty or going aloft—a man who does not refuse or disobey, but who goes about in such a deliberate manner that he sets a bad example to the rest of the crew—what entry can you make in the log against that man?—If his conduct in that way were persistent I might make an entry to that effect in the log, but as a matter of fact you will not have such a man often, because the man who is going to be relieved at the wheel will take care that the other comes to him in good time. I think that would right itself in the forecabin without the master's interference.

(Chairman.) The Committee are obliged for your evidence.

## SIXTH DAY.

Thursday, 13th July, 1899.

PRESENT:

The Right Hon. the Earl of DUDLEY (Chairman).

Captain A. J. G. CHALMERS.

Mr. W. J. HOWELL.

Mr. CLARK HALL.

Mr. C. HIPWOOD, Secretary.

Mr. J. H. BEAZLEY called; and Examined.

*Mr. J. H.  
Beazley.*

13 July 1899.

1303. (Chairman.) You have, I think, been kind enough, Mr. Beazley, to come and give us your views upon this question that we are considering—the question of continuous discharges?—Yes.

1304. You are a large shipowner, I believe, are you not?—Yes, a steamship owner.

1305. Connected with what firm?—The firm of Robert Alexander and Company, Liverpool.

1306. You are also connected with some association in Liverpool?—Yes, the Liverpool Steamship Owners' Association.

1307. That is a very large association?—Yes. They are the managing owners of about 2,100,000 tons of steam shipping, embracing all classes of steamers, but chiefly large "liners."

1308. Have you ever before considered the question of whether a continuous discharge system would be advantageous?—Yes. I first advocated it in 1883. At that time shipowners were very much worried and inconvenienced by seamen failing to join their ships after having signed articles, and I thought that the adoption of the continuous record in place of the single voyage discharge would be of great assistance towards inducing men to carry out their agreements, part of my proposal being that the master should be empowered to retain the men's certificates of discharge upon their signing articles as a voucher that they would join the vessel. At that time it was quite a common thing for men to sign articles for two or three ships on the same day, and to take their choice as to which they would join. I thought this proposal would put a check to that kind of thing. This trouble arose not long after imprisonment for desertion was abolished, and it extended to all classes of seamen and ships. On one occasion 16 firemen who had signed for a Cunard mail steamer refused to proceed in her because they were not guaranteed hot rolls for breakfast every morning.

1309. Was your view shared by your association?—Yes. Early in 1883 the two Liverpool shipowners' asso-

ciations, though not very cordially, adopted my suggestions as to the "continuous discharge," and we had some correspondence about it with Mr. Thomas Gray, the then Assistant Secretary to the Marine Department of the Board of Trade. He went dead against the proposal, and nothing came of it. We dropped it.

1310. Can you tell us what were the objections which Mr. Gray advanced?—So far as I can recall them they were—First, that many years ago a register ticket was in vogue, but that the men struck against it, and it was abandoned. I rather think that that register ticket involved a kind of conscription. I think it required the men to join the navy if called upon, or something of that kind.

1311. There were other reasons besides the register ticket?—Yes. Another objection was that a certificate giving a continuous record of services was already obtainable. Again, that a special pocket book in which to keep the present form of discharge was obtainable, and that this would answer all the purposes of a "continuous discharge" if the discharges were placed in it. He objected to put it in the power of a captain to spoil a good record by perhaps unjustly giving a man a bad character. Again, he thought the proposal was that men were not to be allowed to ship unless they presented a "continuous discharge," and this, he foresaw, might prove a serious hindrance to the shipping trade which it was inadvisable to bring about. He thought the continuous certificate in book form would cost £1,000 or £2,000 per annum more than the present form, which someone would have to pay. Those, so far as I remember, were his objections.

1312. Did you argue with Mr. Gray on that?—Yes. I did, but I could not make him alter his opinion. I pointed out to him that he was mistaken in supposing that it was proposed to make it illegal to ship a man who did not hold a "continuous discharge"—such an enactment would have met with the most strenuous opposition from shipowners and would do now. The proposition was merely that the continuous record should take the place

of the single voyage discharge. I wish especially to draw the attention of the Committee to Mr. Gray's opinion on this point, as I think in view of his long and intimate experience of shipping matters his opinion carries great weight.

1313. And have you considered the question since that time?—Yes. In August, 1888, this question of the continuous discharge certificate in conjunction with certificates of competency for carpenters and boatswains was taken up by the Board of Trade, and a Bill was drafted by the Department containing clauses by which it was made penal for men to go to sea without such certificate or for shipowners or masters to ship them. In November, 1888, Mr. Gray paid a visit to Liverpool in order to confer with shipowners as to the proposed Bill, and a joint meeting of the two shipping associations was convened for the purpose. At that meeting Mr. Gray expressed himself as opposed to both propositions, as also did the shipowners, and these clauses were dropped out of the Bill. The Bill went forward with some other clauses in it. Here again I would like to call attention to Mr. Gray's expressed opinion as to the inadvisability of making it illegal for a man to ship without producing a certificate of discharge, and also of requiring carpenters and boatswains to hold qualifying certificates. His opinion is of importance in view of the Rating Certificate Bill now being promoted by Mr. J. Havelock Wilson, M.P. Mr. Gray approved, however, of my suggestion that masters should be empowered to hold men's discharges upon their signing articles. I may remark that in cases where men ship under the Indian Acts, they have that power. Under our laws masters have not the power to hold the certificates of discharge.

1314. You know, of course, that some years ago a form of continuous discharge, called E2, a voluntary form, was issued by the Board of Trade, but that it was not adopted. I think only two or three books were sold?—Yes. I have seen it stated in the Press that in 1857 the old form was abolished, and that a new continuous form took its place. I have seen it stated in the Press, but, myself, I do not think it was the case. I think it was only a voluntary form.

1315. I think that was so?—There was one in Liverpool also which used to be issued to Liverpool sailors. For a long time it was thought a good deal of; the men, I think, paid half a crown for it; it was in a little tin case. That also gradually became obsolete, and fell into disuse. (*Handing in a document.*) This is one, dated 1845. It has been used five times—i.e., for five voyages.

1316. (*Mr. Howell.*) That was not issued on the initiative of the Government; it was a local experiment?—Yes. It was purely a voluntary one. It is rather interesting.

1317. May we keep this one?—You may.

1318. (*Chairman.*) You say that in 1888 there was some discussion between the Liverpool associations and Mr. Gray on the subject of continuous discharges in conjunction with other matters like certificates of competency?—Yes.

1319. And that at this meeting the shipowners of Liverpool had seemed to modify, rather, the view which they expressed originally as to the expediency of a system of that kind—of the continuous discharge?—Yes. They were never very enthusiastic about the continuous discharge. I persuaded them, and I think they were very glad to have an excuse to go back on what they had agreed to.

1320. And what do they think now about it?—Theoretically they think it is unanswerably the best form of discharge; but they were very fearful of it being made compulsory for men to produce a certificate before they are allowed to ship, which would have the effect, perhaps of making a compulsory apprenticeship to the sea. They were very much afraid of that.

1321. They are afraid of it being made compulsory. I will deal with that in a minute. But have you any view as to its success in practice?—I think it would be very successful with all the better class of men.

1322. You think it would. For instance, do you yourself see sufficient reasons for making a change at the present time?—No. I do not at present. We are pretty comfortable as we are, and the less interference we have the better pleased we are. We do not make any complaints of the sailors at present. The fact is, you do not want really technical sailors, as you used to do in the old sailing-ship days. Sailing-ships are gradually

disappearing, and a man soon gets to know what he has to do on board a steamer.

1323. Mr. Beazley, you say that your association are afraid that a scheme of this kind might entail some enactment to the effect that no master shall be allowed to ship a man unless he produces his continuous discharge form?—Yes.

1324. Now, even supposing that that was so—which, of course, I do not admit—why would you object to that?—Because in no other trade has a man to produce a certificate before he is allowed to accept employment, and any artificial restriction put on shipping labour would be objected to. It would naturally restrict the field of selection.

1325. Why should it?—Fishermen would not have a continuous record.

1326. If they went to sea they would?—For the first time they would not.

1327. Why not?—He would not have a discharge from a fishing-boat, and he would not have been discharged before. For instance, when there is a strike we get a lot of fishermen from Yarmouth and places like that. If there was an enactment that no man should be allowed to be shipped unless he had a continuous discharge certificate to present at the time he shipped, we should be shut out from all these men, although they are splendid sailors.

1328. An enactment of that kind surely would not mean that a sailor must have had a voyage before. I mean it would not prevent you from shipping a man for the first time to go to sea. If a fisherman found that owing to a strike he could make more money by shipping in one of your vessels than by fishing, he would go to the superintendent's office and get a book, and would come to you, and say: "I understand you want men. I have never been to sea before as a seaman. I am a fisherman, and here is my book." Why would that restrict you at all?—We should have the book without anything in it; it would be an empty book.

1329. Of course, you could not have a discharge certificate if he has not been discharged. But it would be exactly the same as in the case of a sailor who was proposing to make his first voyage, would it not?—Supposing it was enacted that we should not be allowed to ship a man unless he produced a certificate of discharge. What would be the effect?

1330. Surely nobody would dream of making it compulsory that everybody should produce a certificate of discharge—that it should be compulsory in the case of a man who has not had a certificate of discharge?—But you would not allow him to go to sea under such an enactment?

1331. We are supposing that no one would try to do that. We are supposing that the enactment is to prevent a seaman from being taken on who had a discharge certificate and could not produce it. What do you say to that?—It depends upon how the law is drawn up, and whether it provides that a man is not to ship as an A.B. until he has served three or four years as an ordinary seaman.

1332. I do not mean anything about rating. Suppose it merely prevents a man from being taken on a steam ship at all unless he can produce the record of his past services?—You would have the ship owners up in arms immediately.

1333. Why?—Because there are lots of men who cannot produce them.

1334. Why not?—You know what sailors are. They are careless fellows, and lose them.

1335. Suppose you have some provision for cases of loss?—To show the practical working of anything like that, suppose we have a steamer with 400 or 500 passengers on board, and supposing at the last moment she is in want of somebody who must have a certificate of discharge, and probably she must not go to sea without so many A.B.'s—

1336. Do not talk about the rating. Tell me why it would be a restriction on shipowners if you enact that they should not take a man who cannot produce his certificate of discharge. Why would you object to that?—Supposing there are a couple of trimmers short on board and two men offer themselves; though they are all right for this unskilled labour, if they have no certificate of discharge you would not be able to take them. Perhaps the ship is at the dock gates waiting to get out, and she has to wait another tide until they hunt up men with certificates.

Mr. J. H.  
Beazley.

13 July 1889.

Mr. J. H.  
Brazley.

13 July 1899.

1337. You think that would be the case in regard to "jumpers"—pier-head jumpers I think you call them. When you do not know whether you have a full complement on board or not, you often have substitutes ready who jump in at the last moment?—Yes. They might not have certificates of discharge, and you would be precluded from taking them, although as trimmers they would be quite good enough.

1338. Let us divide these two again. Is your objection merely that an enactment of that kind would make it difficult for you to take men on at the last moment as substitutes in the place of men who have not turned up, or is it that it would cause you inconvenience in the shipping office when you ship on the men?—Both.

1339. Let us have one first. I can quite understand the inconvenience with regard to the pier-head jumper, but what is your objection with regard to the other?—Supposing there were strikes going on; we should object to be restricted in our field of selection of the labour that presented itself.

1340. How would you be restricted?—If we take the risk as to whether a man is a good or a bad sailor, we say we ought to be allowed to ship anybody we like just the same as people on shore are allowed to engage anybody they like if they take the risk as to whether he is a good workman or a bad one.

1341. That is a statement of principle. It is an excellent theory. I want to know what you would be afraid of if that theory was departed from. Why would you be restricted? I can understand you saying, "I object to anything at all because I maintain we ought to have a free hand to ship anybody we chose, whether he be Hindoo, Parsee, sailor or soldier, or anybody. I don't want any interference at all; I don't want any restrictions." But if you do not go so far as that, if you merely say it would hamper your trade and make it very difficult for you to ship men in the case of a strike, I want to know how it would have that effect. Why would it make it very difficult to ship men?—It would make it very difficult inasmuch as we should have our field of selection limited to men who could produce certificates, whereas at present we can take anybody we like to select, even if he has never seen a ship before.

1342. I really think you have misunderstood my question?—I understand you to say, supposing it were enacted that a man should not be shipped without a certificate book—

1343. I do not think that even under a law of that kind, if you think of it, that you would be prevented from shipping a man for the first time. All he would have to say is, "I have come to you to go to sea. I have never been to sea before in my life. Here is my blank book. If you are willing to ship me I will go. All I have to do is to give my book up to the captain when he signs me on, and there is an end of it"?—Do you mean this, that the new form proposed should merely take the place of the present form?

1344. Certainly; take the place of the present form?—Nothing more than that?

1345. No. You abolish the single voyage discharge form and have the continuous discharge?—If that is all there is no objection to that.

1346. There is no objection to that?—No.

1347. I am very glad to hear that?—So long as it does not go further.

1348. Do not you think, when you say you are afraid it would hamper you in your trade if it were made illegal for anybody to ship a man without a book of this sort, that really you a little misunderstood the situation. Do not you think, on second thoughts, that it would not hamper you?—If he has only to show a book, and it does not matter whether it has got a discharge in it.

1349. Of course, obviously it cannot have a discharge in it, if he had not been to sea?—No, of course not.

1350. (Mr. Clark Hall.) In the case of a strike you endeavour to get men wherever you can get them?—Yes.

1351. It may be that men who have left the sea for some time, and who have lost their discharge come forward and volunteer to ship?—Yes.

1352. That would be one of those cases in which the insistence upon the production of the discharge book would throw difficulty in your way?—Yes.

1353. There is another case I want to put to you. I fancy that in regard to large liners you have what you call a shore gang; that you know the men very well;

that they are good seamen; and that you sometimes draw upon them in case of difficulty, without requiring the production of a discharge certificate, which they have probably lost?—Yes.

1354. (Chairman.) With your knowledge of shipping you do not foresee any difficulty for a seaman who has lost his book, whether he has retired from the sea or whether he has not, obtaining a copy from the official log?—I believe he could get a copy, of course, but it would take a little time.

1355. That would be a matter of arrangement. If it could be so arranged that a man could speedily get a copy of the book he has lost, the difficulty pointed out in the case of a strike would be done away with?—If you knew beforehand. But this is what happens in times of trouble. Perhaps it is only at the last moment that you know you are short, and when you find a man without a certificate he would have to refer to London to obtain a copy and it would take two or three days. Practical difficulties crop up in cases of this kind.

1356. You do not want a system of this kind to hamper you in your power of signing men on quickly?—That is it.

1357. And as long as that danger is safeguarded against you have no objection to the system?—To the system *per se* there is no objection.

1358. So long as you are not hampered by it in obtaining men quickly?—Yes, and that it is not made illegal to ship men without continuous discharges.

1359. That, of course, is going back to what we have already said?—I think we are a little at cross-purposes as to that. Allow me to add that the certificate of discharge book is not a certificate of discharge; it is only a form of discharge. The certificate of discharge must be given by the captain after a man has made a voyage.

1360. I do not think we are at cross-purposes there. You say that you do not see yourself any reason for any change now in the present system; that you are content with the present system?—Yes.

1361. I do not know whether you have had any experience of it in your steamers, because I understand that you get the best class of men, and there are probably fewer scenes in the shipping office with your men than with others; but you have heard, I suppose, that very often under the present system when a discharge on a single sheet is given to a man he tears it up and throws it about the office?—I have heard of such cases a few years ago. I have not heard of many lately.

1362. You believe such a thing is possible—has occurred?—Yes.

1363. And you cannot defend a system where that is possible?—The same thing would happen with the continuous record, I think.

1364. Why?—If a captain gave a man a bad discharge for a voyage that man would tear up his continuous record just the same as he would a single voyage record.

1365. Do you think he would?—If it was a very bad one I think he would.

1366. Tear the whole book up and throw it away?—I think he would.

1367. I am perfectly certain he would if all the employers were as liberally minded on that point as you are, and were ready to accept men without any sort of knowledge as to their previous record or character. But do not you think that there is, at any rate, a good deal in this view, that in tramp steamers the captains, before they sign a crew on, do wish to know something about their previous record?—Yes.

1368. I suppose you have the same men over and over again in your ships?—Principally, we carry lascars.

1369. And you know all about your men?—Yes. All the liners take the same men over and over again.

1370. Therefore, you know from your own experience, and from the report of your own officials what the men are like. That is not so in the smaller ships—in tramp ships?—No, particularly in sailing ships.

1371. You can understand that in this case a man does want to know something about his crew's previous record?—Yes.

1372. Do you think it would be a great help to masters in vessels of that kind if they were able to see from a book what the men had done before?—Yes.

1373. And do you not think that if these masters only engaged their men when they had some such satisfaction

given to them, the men would be very chary about destroying their books?—I daresay it would tend to prevent them from destroying their books of discharge. They would not be so apt to tear up a good record as they would a single sheet.

1374. How if it had one bad record in it?—No, I admit that, although I believe some sailors would tear up anything.

1375. If it would have the effect that they would not be so likely to tear the discharge up as they have been, is not that a reason for the change?—Yes, I admit, theoretically, everything in favour of the continuous discharge.

1376. In theory, at any rate, there is a reason for the change?—Yes. The only thing is the fear of making it illegal for men to ship without one of these discharges. That is the only fear in the shipowners' minds.

1377. You say, of course, that there are no complaints of your seamen, but they are all lascars?—I am speaking generally. I have made inquiries among other shipowners, trampowners, and others, and they have no complaints to make, with one or two exceptions, of men not joining after they have signed articles. They have no complaints to make, in fact, either as to men not keeping their engagements or as to quality. I made it a point to inquire among the shipowners before coming here.

1378. Your view then is that the British seaman has very much improved of late years?—Either that or so much is not required of him now that steamers have displaced sailing ships to such a large extent.

1379. Steamers displacing sailing ships would not affect the behaviour of the men ashore, nor would it affect their cleanliness and discipline on board ship, I suppose; or would it affect their readiness not to turn up after they had signed articles?—No.

1380. You say there are fewer cases of men failing to join than there were originally?—Yes.

1381. Surely that is not due to steamers having displaced sailing ships?—I cannot explain that. There was a regular outbreak of men failing to join in 1883.

1382. (Mr. Howell.) Was not that immediately after the abolition of imprisonment for failing to join?—It was.

1383-5. At any rate, you think that the British seaman has rather improved of late?—Yes.

1386. As regards their behaviour on board and on shore, do you think they are steadier and more sober than they used to be?—I think in many cases they are steadier. I do not think you see so many drunken men going to sea now as you used to do.

1387. You admit your experience of a worse class of vessels in which these men ship is not a great one?—No.

1388. As regards rating. You seem to think that the continuous discharge form would involve some rating requirements, do you not?—I am afraid so, seeing that the Department once themselves drew up a Bill which combined the continuous discharge with rating, and there is a Bill now before Parliament something to the same effect.

1389. (Mr. Howell.) I think the Bill Mr. Beazley refers to was simply a draft of proposals?—It was never put before the House.

1390. It was not put before the House, and it was never adopted by the Board of Trade. It was a draft of certain proposals that was drawn up in order to elicit the views of the shipowners?—(Producing a document containing the recommendations of the Royal Commission on the loss of life at sea.) There it is.

1391-2. Yes, that is it?—It is enough to frighten shipowners by the look of it. It looks rather like a Bill, and as if it might develop into a Bill. In fact, part of it—about half of it—has become a Bill.

1393. It was simply sent to the shipowners for the purpose of eliciting their views. Part of it was endorsed by the shipowners, but part of it was very much objected to?—The Board of Trade flew a kite in which they were both mentioned. There is also the fact that there is a Bill before the House, and that deals also with continuous discharges.

1394-5. (Mr. Howell.) I think you are aware that the Bill has been withdrawn?—I daresay, but it will be presented again some other time.

1396. And that it was first introduced by the Government?—Oh, no.

1397. (Chairman.) Would you object to an attempt to

bring in a rating Bill on the same grounds as those which you urge against the continuous discharge being compulsory?—Yes.

1398. Merely the interference with freedom?—Yes.

1399. You do not think it matters that captains in some steamers go to sea, and then discover when they are at sea that they are short of good men?—I do not say it does not matter, but they always select the best men offering themselves. What I am looking at is that in the event of disturbance, in the event of labour troubles, if a Bill were brought in making it illegal to ship a man unless he had a certain certificate it would be playing into the hands of the agitators right away. You would circumscribe the field of labour altogether for shipping.

1400. If you were not allowed to ship men except under a certain rating?—Yes. For instance, we will suppose that there is a strike, and that a Bill had been passed making it illegal that shipowners should ship a man unless he produced and had a certificate of discharge, what would there be to prevent the secretary of a union from buying up all these certificates of discharge?

1401. Do not let us go back to the certificate of discharge; let us talk about rating?—Well, for buying up the certificates of rating. The shipowner would be non-plussed. Then they would not be able to get men.

1402. (Mr. Howell.) Do not you think that it would cost the union a considerable sum of money?—Not if they did it at one port, and if they gained a victory at one port, it might serve their purpose.

1403. There is nothing to prevent shipowners from importing men from other ports?—You cannot get carpenters and boatswains easily. There is only one of each on each ship, and there is only a limited number of them.

1404. Any such proposal would place additional power in the hands of the union?—Yes.

1405. (Chairman.) Do you not think that a system of continuous discharges would probably have the effect of warding off any attempt to deal with the rating instead of hastening it, because it seems to me that it can at any rate be argued with some force that a skipper is in a very difficult position if he goes to sea and finds that half his men who called themselves A.B.'s are not A.B.'s at all? Very well. It is, of course, possible that that system may go on for ever, and people may be content to be placed in that position. But, supposing it is not so. Supposing that those who are not so fortunate as you are count it rather a necessity that they shall have some knowledge of what their men are before they ship them, would it not be less dangerous for you if the continuous discharge was adopted, because a skipper would from that be able to judge to a great extent what the capabilities of the men were? It seems to me that if you do bring in some system by which masters shall have that knowledge, there are only two ways of doing it—either by a continuous form of discharge, or by having some compulsory rating, and I should have thought, as you strongly object to compulsory rating, that the continuous discharge was the lesser of the two evils, unless, of course, you say that the grievance is so slight that it will never be dealt with?—I have said before that I admit that theoretically the continuous form is preferable.

1406. Yes. But from that point of view?—And it would be easier for a captain to see whether a man had been for a certain period at sea, and whether he had got good records for a certain period, or not. It would be much easier than under the present system.

1407. And he would be able to judge of the capabilities of his men?—Yes.

1408. Do not you think that that would go a long way towards meeting the grievances which some of these people allege that they have to submit to now, when they say they want some compulsory rating in order to safeguard themselves?—Are you speaking of making this compulsory—of making it illegal for men to ship without a certificate?

1409. We can leave that out. Do not you regard a continuous discharge system as a counterpoise, and an alternative to a compulsory rating Bill?—No. I do not think it does unless you make it compulsory, and then that would be strongly objected to.

1410. You can always make it compulsory by adopting it. You have the effect of compulsion by unanimously taking it up?—If you do away with the single voyage form and put this continuous form in its place, I have nothing more to say. I have no objection to make if

Mr. J. H.  
Beazley.

13 July 1899.

**Mr. J. H. Benzley.**  
**3 July. 1899.** that is all you do. If you go back and say no man is allowed to ship unless he produces a continuous discharge or any discharge, then I say the shipowners would be up in arms all over the country.

1411. Of course, this proposal that it should be illegal to ship men without a discharge, has never been suggested from here?—Yes. In this proposal that was distributed.

1412. That it should be illegal to ship men?—Yes.

1414. (*Mr. Howell.*) I think we may take it that you have not altered the opinion you expressed in 1886—you still think, theoretically, that the continuous certificate of discharge is preferable to the other?—Yes.

1415. It is only the possible results that may follow the introduction of such a system which you fear?—Yes.

1416. Were there not more than twenty-five or thirty

years ago general demands for a continuous certificate of discharge?—I do not know that.

1417. The Royal Commission on the Loss of Life at Sea recommended it. Mr. Gray, whom you quoted yourself, said it would be to the convenience of everybody concerned, except, perhaps, bad seamen, that the records of a man's service should be continuous. They were recommended by the manning Committee?—Yes.

1418. In those circumstances do not you think it would be advisable to make a serious effort to introduce a system of continuous discharges in order that it might be fairly tried?—I see no objection, provided that in the future it merely takes the place of the present system.

(*Chairman.*) We are much obliged to you for your evidence.

**Mr. J. H. Wilson, M.P.**

**Mr. J. H. Wilson, M.P., called ; and Examined.**

1419. (*Chairman.*) You have been kind enough to come and give us your views on the subject of the forms of discharge for seamen, and, of course, with your knowledge of seamen you are in a position to speak with authority upon a subject of that kind. Are you satisfied with the present system?—No, my Lord. I think that the present form of discharge is of no use whatever. It is no guide to masters to give them any idea as to the ability of the men or the conduct of the men, and it is most unsatisfactory to the seamen themselves.

1420. Why unsatisfactory to them?—It is unsatisfactory to seamen for this reason: that very often incompetent men—in fact, men who have never been at sea before—are engaged as able seamen, firemen, cooks, and stewards, and at the end of the voyage these men get the same rating as men who have been years at sea. They get these certificates of discharge marked "V.G." for conduct and "V.G." for ability, and, although these men have not been able to do their work as qualified seamen or firemen, or cooks or stewards during the voyage, yet they get this discharge, and then they enter into the labour market to compete with men who are competent to do the work. So from that point of view it is very unsatisfactory to the seamen. I have a statement here from one man which will show you what is an every-day occurrence. He is a man named Henry Hessler. He says: "I have never been at sea before, and I was shipped on the steamer — at Baltimore on the 30th of the fifth month, 1899. I was accosted by a boarding-house runner, who asked me if I would go in the ship as a fireman. I said, 'I have never been at sea before.' He said 'That don't matter. You'll do.' And, of course, he was engaged as fireman, and thirty dollars in advance was paid for him by the captain, of which the man got something like five dollars in the way of clothes, and a dollar in cash. And at the end of the voyage he gets a "V.G." discharge as a fireman for ability. Now, I suppose, that man will be signing on board other ships as a fireman, and yet not at all competent to do his work. That is only a sample.

1421. It does not at all follow. He may have been stoking all that time?—But he says not.

1422. He says he went to sea as a fireman?—He says, "I have not been at sea before." The other man says, "That does not matter. You will do." It might quite possibly happen that he may have been stoking on shore, but I do not think it at all probable.

1423. Would he not call himself an engineer if he had gone to sea in a skilled capacity to look after an engine and not to stoke?—No.

1424. (*Chairman.*) What do you think he would do on board this ship?—There is a great deal of skill required in stoking, because if, say, 190 pounds of steam has to be maintained, a skilled man will maintain that steam—not quite easily, it depends on the kind of ship she is—but an unskilled man would not be able to maintain 130 pounds of steam. The result is that the engineers would have to put that man to trimming coal in the bunkers. Anybody can do that provided they are not seasick. A man who is strong and not seasick can do trimming—shovelling coal along the bunkers. But if he is not able to do as a fireman, that man would be put to trimming, and the other men instead of doing four hours at the fires and eight hours off would have to do six hours watch. They would have to do this man's share of the work, and then that leads to grumbling and fighting.

1425. Is it not quite possible for a man to go to sea in the engine-room department without having ever been

at sea before, and yet earn a "V.G." certificate?—Not and do his work.

1426. You think that it is absolutely impossible for a man to go to sea in any circumstances whatever, unless he has had a previous training at sea, and earn a "V.G." certificate?—That is perhaps carrying it a little too far, because you might have a man employed in a ship yard or boiler shop, fitting in boilers and engines. Such a man would be employed in getting up steam for trial trips, and without any sea experience that man would make some kind of shape when he got to sea if not seasick. If you take a "green" man who knows nothing about the business whatever, and put him into the engine-room or stoke-hole without any previous sea experience, I say it is impossible for that man to do his work.

1427. Supposing you shipped what you call a "greenhorn"—a man who knew nothing about his business at all—and placed him on board your ship and put him to doing certain work, at the end of the voyage, if the man had behaved himself perfectly well and had done the work you told him to do perfectly well, what other discharge could you give him than a "V.G."?—My Lord, you might give the man with every confidence a discharge marked "V.G." for conduct. The man might have been a perfectly civil man.

1428. But if he has been merely put to polishing up brass work down in the engine-room or cleaning steps, or anything of that sort, and has done it perfectly well, you cannot do less than give him a "V.G."?—We are dealing with the stoke-hole department. How are you going to give a man a certificate that he has served on board your ship as a fireman when he has only been polishing brass work or trimming coals? How are you going to rate him as a fireman?

1429. (*Mr. Howell.*) You mean, I think, that if a man, a "greenhorn," goes into the engine-room department he might begin at the bottom as a trimmer—that he is entitled to a "V.G." discharge as a trimmer, but not as a fireman?—That is so. The same thing applies to a man who is a cook. It is an every day occurrence for men to be engaged as cooks who have never had one day's experience in that capacity. I know a case where a man was a butcher. He became a bankrupt. He had a friend who was a managing owner, and who, to get him out of reach, got him on board a ship as cook. Unfortunately I had to suffer from this man's ineffective cooking, and I know something about it. Many men like that have been shipped as cooks, and the result of it is this, that they cannot do the work. The men are continually grumbling, and it leads to insubordination and mutiny, and very often to imprisonment for some of the men. If there was a proper system of discharges or certificates—whatever you have a mind to call it—it would not be possible for men to be shipped under such conditions.

1430. (*Chairman.*) It does not seem to me that the grievance which Mr. Wilson has got in his mind, although it may be incidental to the granting of "V.G." discharges, really arises from that. Because you would still have to go on giving men certificates and discharges under any system, and it would be very difficult, would it not, to interfere with the freedom of a skipper to give what form of discharge he thought right?—You asked me, I think, my Lord, at the commencement what objections we had to the present form of discharge. Well, my answer is that the present form of discharge simply is no guide whatever. Therefore, we say that it is a form of discharge that ought to be done away with, and something else substituted in its place.

1431. It entails misapprehension?—Yes.

1432. When you talk about doing away with this form, do you mean to say that what this form sets out does not satisfy you?—Well, it may be necessary to have some kind of discharge to say that a man was engaged on a ship on a certain date, and was discharged on a certain date. That might be all right, and as far as rating is concerned that would be correct too. But I do object to a man being put down as a cook, or steward, or sailor, or fireman who has not qualified to fill those positions. It is not a correct representation of what a man really is.

1433. Yes; but that has to do with another subject, has it not. I mean that has really nothing to do with discharges, that has really to do with engagements?—Yes. But would you not think, my Lord, that it would be a wrong thing in discharging a man to describe him as a cook if he was not a cook?

1434. I am bound to say it does not seem to me altogether right. I quite agree. But still the fault is that you take him to sea as a cook?—But he has been passed on to me as a cook. You have nothing whatever to safeguard you against that. I think it is like giving a man a false character. Your cook has left, and someone applies to you for his character, and you say: "This is a very excellent cook, and I can highly recommend him." The next party engages him, and finds that he is not a cook at all, and that he has not a good character.

1435. I quite see your point. I perfectly agree. Now, you also say you know cases where good men have bad discharges?—Yes. Our experience with regard to that is this, that the men who have been guilty of insubordination and drunkenness on board ship very seldom get bad discharges. Especially drunken men who have continually broken their leave in foreign ports, gone ashore and got drunk, and been away from their ships two or three days fighting. Such a man really does not get bad discharges, because the captain says: "Well, I have done with him. I am not going to bother about him." And he makes the discharges all out alike—gives them "V.G.'s," and so on. And we find—I want to emphasise this point—that that applies to foreigners in the same degree that it does to Britishers. There are as many foreigners, as a matter of fact, who get drunk, and make trouble on board ship as Britishers; but most of these bad discharges I have found in years of experience are given to men off whom, when they are being discharged from the ship, the captain wants to take a day's pay. Or something may have occurred on board ship where a man thought he was being imposed upon, so refused to do something. These men generally get the bad discharges. I have the case of the *Heathfield*. These men signed on in London and were paid off in London, and the captain wanted to stop five days' pay off the men. He was entirely in the wrong, and the shipping master at Tower Hill, who heard the case, decided in the men's favour, and saw that the men were right. When the captain found that legal proceedings were going to be taken against him, he consented to pay the five days' pay; but in revenge—and these men were all foreigners—he declined to report for character and for ability.

1436. (*Mr. Howell.*) He declined to report as to their character and ability?—Yes. We have many cases like that.

1437. (*Chairman.*) Why did not these men refuse to have this character?—Because they did not understand that they could refuse. We know, as a matter of fact, that a seaman can refuse to have that entered on his discharge, but I venture to say that there are not over three men in the whole mercantile marine in our department, stokers, sailors, and firemen,—I don't know what the captains may know—who are aware that they can refuse to have their character entered on their discharge. It is only recently that I became aware of that fact, and if anybody had known that I should have had an opportunity of knowing it. The men were not aware of the fact that they could refuse.

1438. Of course, it would get over some of the difficulty if they did know?—It would remove one serious objection, but then it would come back to this point, that the men who had "V.G." discharges would, in all probability, get a preference in employment over those who had not.

1439. But, I don't see how you are going to get over the difficulty by any change in the system of discharge, because it seems to me the evil of many of these discharges is that the master is not telling the truth, and

that, for reasons of personal spite or something of that sort, he may give a man a discharge inferior to what he deserves. I don't see how you can help cases of that kind occurring occasionally?—You could get over it by doing away entirely with the granting of characters.

1440. Having no record of character at all?—Quite so, none. The idea and the contention of many people is that the fact of giving a captain the right to give a seaman a character for conduct or ability assists the captain to maintain discipline aboard a ship, but my view is that it is no assistance whatever, because when men get bad discharges I have seen them more than once roll them up and throw them at the captain in the Mercantile Marine Office. Very often they tear them, and then ship on their previous discharge, which may have been a good one, so that the giving of these certificates or the withholding of them does not at all assist the captain in maintaining discipline. I admit that discipline is at present very lax on many ships, and not what it ought to be. Discipline is indeed far from what it should be on board ships. That brings us to the question as to what is the best means of giving the captain the necessary powers. Our view is that if a seaman has committed an offence on board a ship he ought to be punished for it, but the captain should not be the judge and jury and executioner. If a man has committed an offence he should be tried before a proper tribunal, and if found guilty he ought to receive punishment. What we recommend as a better way of punishing the men who offend, better than sending them to goal or inflicting fines, would be to suspend their certificates for a certain length of time.

1441. But that is rather going into another subject. Would you object to sailors in the matter of character being placed entirely upon all fours with people employed ashore. Do you, for instance, see any difference between the case of a seaman who is discharged by his employers and that of a workman who is discharged by an employer on shore, or between the case of a cook discharged from a ship and a cook discharged from domestic service on shore?—My experience of shore workmen is this, that there is not one in fifty who gets any certificate of character at all on quitting his employment. If you take the case of men employed in factories, mines, workshops and shipyards, there is not a single one of these men ever gets a character. Indeed that is a thing they have always been against; I mean, what they call the character note system. Working men on shore have always fought bitterly against it. In fact, some big strikes have taken place in consequence of attempts by employers on shore to adopt that system.

1442. I can understand that you would think it undesirable both on shore and afloat that there should be a compulsory record of character; but in the case of a factory when a man happens to be a good workman and to be ambitious and anxious to show a good record of his character, should you make it illegal for that man to go to his employer when he is leaving, and say, "Will you please give me a letter of recommendation." Surely you would not prohibit that, and make it illegal?—Certainly not.

1443. In like manner, do you see any reason why a seaman should not go to the master when he is discharged, and say "I hope I have satisfied you, and that you will give me a mark of good conduct"?—Not if you confine it strictly to that. If you do away with any idea of a compulsory certificate of conduct system, and if a seaman, when he is discharged, chooses to go to the captain, and say, "I hope I have given every satisfaction, and if so I should be obliged for a letter of recommendation," I would not object to that in the least. On the contrary, it might be a good thing, but I do object to any law saying that a seaman must have a record of character, which is a different thing altogether, unless you go a step further and say that when a captain improperly gives a seaman a bad discharge the seaman should be in the position of being able to bring the captain before a court to state the reasons why he gave the man a bad character.

1444. In order to illustrate what I mean, let us suppose that under the system of discharge certificates there were no discs to be filled up, and that all we did was merely to have a record of service; would you object to a seaman going to the captain at the end of the voyage and saying, "I hope I have done well, and as you have to give me a certificate of discharge, would you kindly put on the back of it what you think of me?—I would not object to that, only I know it

Mr. J. H.  
Wilson, M.P.  
13 July 1899.

*Mr. J. H. Wilson, M.P.* would cause a lot of inconvenience and trouble to captains to write it.

13 July 1899. 1445. They might have stamps, but I suppose you would have no objection to the captain, in a purely voluntary way, consenting to write down what was his opinion of the man?—I would not object to that, and I don't think anyone else would.

1446. Of course, that is nominally the state of the law now, but I don't think it is quite fair to quote that as the law, as we have issued discharge certificates with discs upon them?—As I understand, our object is to endeavour, if possible, to make things better on board ship.

1447. That being so, perhaps you would not object to a system of voluntary certificates of character. Am I not right in thinking that what would happen if that were carried out would be this, that the good men would go to the masters, and get them to endorse their certificates of discharge with their character, whereas the bad man would not do so?—About ten per cent. of the men would do that, and they would do it for the reason that they wanted to pass the Board of Trade and to get certificates. Such records of conduct would be useful to them in passing the Board of Trade.

1448. (*Captain Chalmers.*) It must be a written testimonial for the Board of Trade examination, whereas these would be stamped endorsements?—They would get a recommendation in some form which would amount to about the same thing.

1449. (*Chairman.*) They would probably get both?—The bulk of the men would not bother at all about it. I have known more than one case where young men have been anxious to pass the Board of Trade examination, and where the captain has been aware of that, but something amiss has taken place during the voyage, and at the end of the voyage when the men have applied for a recommendation, he has absolutely refused, knowing full well that in doing so he was doing the men a bad turn. Not that there had been any material fault on their part, but perhaps they had refused to do something for him, and he was determined to pay them out for it, so that system is often used in a manner not satisfactory.

1450. In the précis of your intended evidence there is a reference made to "field days." What is a field day?—A field day is a day on which men have to do additional work at the expense of their own proper period of rest. Suppose a fireman has been on his watch from eight o'clock in the morning until twelve, and after he has had his dinner he is ordered to go down into the engine-room to wash paintwork or other kinds of labour when he ought to be at rest, that is what is called a field day. It is the same with a sailor; he may be ordered on deck instead of getting the usual period of rest. This sort of thing leads to a great deal of dissension, and often to a refusal of duty. There was one case recently tried in London, the case of the "Star of Victoria." The men had been two voyages in the vessel, and had good discharges, but in the third voyage they were ordered on field day duty. They had done two, but the third time they refused, and the result was that the captain entered the offence, for he called it an offence, viz., refusing duty. They were logged, and when the men presented themselves for their wages, the captain refused to pay. The following day they were served with a summons for unlawfully refusing to obey the lawful commands of the captain. They were brought up before the magistrate at West Ham. We defended the men, with the result that the magistrate dismissed the summons, and compelled the captain to pay the men compensation; but then all magistrates do not take that view. Some men have been convicted for refusing to do that sort of extra work, and have been sent to various terms of imprisonment. The Manning Committee strongly recommended that field days should be abolished altogether as they were a source of trouble, and sometimes of mutiny.

1451. Is it necessary that there should be what are called field days on every ship?—It is not necessary at all except that many ships have not got sufficient men, and in order to get through the work they resort to this practice of calling men up to do extra work when they ought to be resting. Well-manned ships, such as the liners, have not that sort of thing at all. It is in the tramp steamers, where they have only a handful of men to do the work, that they take advantage of the men in that way.

1452. In the précis of your evidence I see it stated that "Our objections to the proposed continuous discharge are as follows, viz.: We believe that no continuous discharge

or seaman's certificate will be of any real service to either owners, officers, or seamen, unless such discharge certificate is made compulsory for all seamen to produce when engaging on British vessels or ports in the United Kingdom, and ports on the Continent between the Elbe and Brest." What do you mean by "the proposed continuous discharge"?—I understood from the reply which the President of the Board of Trade gave to questions in Parliament, and during discussion, that he proposed that there should be a continuous discharge, and also the ordinary discharge as well, so that if seamen objected to have the continuous form they could still have the old one. We say that no form of continuous discharge will be satisfactory unless it is compulsory upon all seamen to carry them.

1453. I have not a copy here of Mr. Ritchie's answers on which you have founded that opinion, but Mr. Ritchie has asked us to inquire into this question, and I should doubt whether he meant to pledge himself to any particular form. However, passing over that, I should like to ask you one or two questions about the opinion that seamen should always produce their certificates. Do you suggest that anybody should be engaged unless he can produce his book?—We have advocated parchment certificates similar to what the officers have. I now produce a copy of the old style of certificate which was issued in 1854.

(*Mr. Howell.*) That is what was called a register ticket.

1454. (*Chairman.*) You think that unless men produce their certificates in the continuous form they should not be engaged?—I should prefer that a certificate should be granted to a man only after he had proved that he was qualified to hold it.

1455. That deals with the question of rating, which is outside the cognisance of this Committee, but apart from that do you think that no man should be engaged before the Superintendent of Mercantile Marine unless he can produce his continuous discharge?—Yes.

1456. That is your view?—It is.

1457. How do you get over the difficulty of pier jumpers and substitutes?—As a rule they have their certificates.

1458. But about their books?—The pier-head jumper is an unknown quantity. You may get a fairly good man or a very inferior one, but the majority of the men who are what are called pier-head jumpers are men who have been discharged from a ship, say, to-day and get drunk and lose all their money, and the same night, before they have paid anything for their keep, the boarding-house master advances them some money, and they are compelled to go to what is called a hard-up boarding house. The keepers of these places live on that sort of men, and will only take them. They take them on the understanding that the men have to go to the pier-head every time, and if there is a ship requiring a hand the man has to go. Even if he has been only an hour or two in the house, the boarding house keeper retains the advance of £2 odd, or whatever it may be which is given to the seaman on joining, but if the seaman has been two or three weeks in the boarding house it is all the same, as there is no regular settling up. Many of the men shipped in that way have plenty of good discharges, but if proper seamen cannot be got, then the captain may pick up a man who has never been to sea before.

1459. You think that the pier-head jumpers would always have their discharge books in their pockets?—Yes, with the exception of men who have never been to sea before.

1460. How would you deal with the case of men who have not their books in their pocket and those who have never been to sea before?—If captains were compelled to insist upon all the men in the ship having books they would naturally take the necessary precautions to see that that condition was fulfilled, but knowing as they do know under present conditions that they can ship any kind of men they naturally don't bother themselves. We have had companies such as the Anglo-American Oil Company which we have supplied with men for years. When the ships are about to sail our secretary is bound to have men down at the docks or at the port ready if necessary as substitutes. The shippers allow us 2s. 6d. for that, and the men who are not engaged get the 2s. 6d. We always have men, and it is the same in Liverpool, where some firms contract with boarding-house keepers who undertake to have men in readiness.

1461. How about the men who have not been to sea before?—If a man has not been at sea before the captain should not be allowed to ship him, and then the boarding-house master would not take that class of men. At

present boarding-house keepers often prefer a man who has never been to sea before because they have a chance of making more out of his advance notes.

1462. Why should a man not be allowed to ship if he has never been at sea before, especially if he is perfectly honest in admitting the fact?—Consider what a hardship that would inflict on the other men.

1463. Everybody has got to begin some time?—Quite so, but let them begin at the right place. Let them begin as boys; if they are going to qualify as firemen, let them begin as trimmers. If they are going to be cocks, let them begin as assistant cooks, but not impose on other men a hardship on account of their inexperience. We don't object to men beginning. It is a very serious thing indeed how ships are under-manned or manned with men incompetent to do their work. Where there is a large crew of thirty or forty sailors, things may get along even if there are ten or twelve who are not very capable, but when the crew is reduced to six, and two perhaps are taken off for extra work, it is very necessary that the three or four men remaining should all be fully qualified.

1464. But with the exception of pier-head jumpers engaged at the last moment as substitutes, which must always be rather a haphazard system, is it not rather the fault of the master if a ship goes to sea with half of the crew incompetent. If he chooses to make proper inquiries into what the men have done before, cannot he always safeguard himself?—No, it is absolutely impossible. No man could do it, and I will tell you why. It is different if a ship is lying in port for a week or so, for then there is time to examine the papers and see the men who go down applying for berths; but take the case of a ship arriving, say, in the early morning, which has to pay off her crew between eight and twelve o'clock and then sign on another crew the same afternoon. At Milldam, South Shields, there are generally between five and six hundred men, from among whom the chief mate collects the sailors whilst the engineers select the firemen. The moment it is known that men are wanted they crowd round the officers, and the strongest man generally gets to the front first. The officer must get somewhat excited with the crushing, and cannot very well judge as to what the men are like or closely examine their credentials, so that under such circumstances he often does not get the best selection of men. You cannot blame the captain or mate for that, for it is due to circumstances over which they have no control.

1465. Has a captain no means of arranging through an agency at that particular place for a certain number of men to be selected for him beforehand?—The captain has many other duties to perform. When his ship arrives in port he has to enter it at the Customs, and has a thousand-and-one things to attend to, which makes it impossible for him to attend to the engaging of a crew. I am speaking now of such ships as call in the Tyne for bunker coal. The captain may go to the federation office, but that takes some time, and very often he does not find the best selection of men there, and it is not always possible to wire as to when he can bring his ship into port from the Baltic with timber or from Hamburg with sugar.

1466. I should have thought it would have been possible to keep men ready waiting, so that the captain who first comes should have the first selection?—But who is to have the selection ready?

1467. Is there no means by which arrangements could be made for some agency to do that?—We have an agency, and would be only too delighted to provide ships with all the crews they want and see them on board, but the owners would not agree to that.

1468. I should have thought all the master would was a selection of good men to choose from?—We could do all that for him the same as we do it for the Anglo-American Oil Company.

1469. Is it against the law that such a thing should be done?—We have offered to supply ships with men, and to give an indemnity if they are not on board, but the owners won't take that, as they say that would too greatly strengthen the hands of the Union.

1470-1. (Chairman.) If a system of continuous discharges were adopted, would it not make it easier for captains to make a good selection if the discharges were in book form?—Decidedly, if you were to make it compulsory that every man should have one of these books.

1472. Where does the compulsion come in?—For instance, the crimp who takes the pier-head jumper would

not take such men without continuous discharge books, if he knew he could not ship them without the books. He knows now that he can ship any man equally well, or almost equally well, with or without a book, and therefore he does not go to the best men, but often to the worst. Another point is that the use of continuous discharge books would prevent a lot of men failing to join their ships, and that would lessen the necessity for pier-head jumpers.

1473-4. It is not a question of making the book compulsory, but of making the shipping compulsory. I am not contemplating having two sorts of discharges, the single sheet system and the book system. I am contemplating a system which only recognises the book. I do not pledge myself to that, but that is the basis of my argument, and what I want to know is where the advantage from your point of view comes in of making it compulsory that no man shall ship as a sailor unless he can produce a book?—If a man has a book and engages in a port of the United Kingdom and goes to America, he may desert there; that man might ship in another English vessel or in an American ship, and in the course of time he comes back to the United Kingdom. If he has got no book he will not apply to the Board of Trade, where he would be returned as a deserter, and in the course of one year you might have 14,000 in that position. That is about the number of desertions abroad, and in about two years you might have nearly 30,000 who had no books.

1475. Is not that assuming a great deal too much?—Well, in a short time the book might get entirely out of use.

1476. That is assuming that the master prefers to take a man without a book to one who has a book. Take the case you have mentioned of a man who deserts in the United States: even supposing he gets another ship back to England, he has either to trump up a story that he has lost his book, and presumably Mr. Clark Hall would take means to prevent deceit by such a story, or if the man is not successful in getting a new book he has to present himself at the shipping office and ask to be taken on without any guarantee at all for his past behaviour. It lies with the master himself to say whether he will ship a man with a strong presumption against him?—If the production of the book was not compulsory on engagement the book would soon go out of use.

1477. Do you anticipate such a shortage of sailors that a master will be obliged to take men without books if he wants to get his ship to sea at all?—That is so, and the other men, finding captains thus obliged to take sailors with or without books, would put aside their books, and you would be in a worse position than now. My remedy is that if you were to make it compulsory, and a man deserted in the United States, but got back to England, he would find that he could not get a ship without a book. He would then have to apply to the Registrar-General; but unless it is made compulsory the whole thing will end in a fizzle in no time.

1478. Of course, a large part of the success of any scheme must depend upon the co-operation of the masters and mates in its working?—If you make it impossible for any man to sign on without having a book, the whole of the men now employed will have books.

1479. The men who had failed to join would not have books, and if there were anything like 14,000 of them or of deserters in a year, the skipper wishing to sign on a crew might find himself confronted with a lot of men who had not books, and the ship might have to be delayed until a new supply of books was got ready?—Supposing a man has gone to the United States and returned after five weeks or so, if he has deserted he can have another book by paying for it.

1480. Do you suggest that when a man deserts he should have a book when he comes back?—Yes, certainly; but I am not going to suggest that there should not be some punishment inflicted which would be a deterrent to prevent others deserting.

1481. I am inclined to think that if a man is lax enough to desert he does not care much about his character, good or bad, but has determined to take his chance of getting a ship?—Many cases are put down as desertions which are not desertions. A seaman may go ashore and get drunk before the ship leaves; he does not get back on board in time, and leaves perhaps from about £10 to £20 due to him in wages and his clothes also. That may be recorded as a desertion, but it is not so a matter of fact. These are simply cases where fellows have got drunk and lost their ships, and there is a large number

Mr. J. H.  
Wilson, M.P.  
13 July 1899.

Mr. J. H.  
Wilson, M.P.  
13 July 1890.

of cases of that kind. Before a certificate is granted to a man there should be satisfactory evidence that he knows our language so as to understand the ship's orders, and that he is a seaman of the rating he professes.

1482. That is outside our reference. You would not suggest, would you, that these discharges should be refused to a man unless he passes an examination in the English language?—Certainly.

1483. But suppose he has already served on board ship?—Oh, no; in all parts of the United Kingdom there is a class of boarding-house masters who make it their business to go down to foreign ships and persuade young foreigners to desert, perhaps young fellows who may be employed as boys or as ordinary seamen—perhaps they may be Swedes or Norwegians or Germans. These crimps go on board, and the crimp may be a fellow countryman of the foreign sailor, able to talk to him in his own language. The crimp asks the man how much he earns, and it may be a small wage. The crimp tells him that is very little for a big fellow like him, and that if he comes ashore he will get him an engagement on board an English ship at £4 or £4 10s. a month, that being a very material increase. If the young man is persuaded to leave his ship, the crimp gets him shipped in an English vessel; the seaman may know scarcely a word of our language, and may be, moreover, an inferior sailor. If it were compulsory that such men, before being shipped as able seamen, should have a continuous discharge book and proof of rating, that would strike a blow at the crimping and desertion from foreign ships in English ports, of which so much goes on.

1484. I thought you meant that at the end of the voyage, when a foreigner had been serving on a British ship, the master should not be allowed to give him a discharge unless he passed an examination in English, whereas, if the man had been a voyage in that ship, and had done his work, that would be a presumption that he knew enough English to understand the orders?—That is not so. Before a foreigner is allowed on an English ship at an English port he ought to be able to prove that he understands the English language.

1485. (Mr. Howell.) Do you mean that before he is allowed to engage he should prove his knowledge of English?—Some knowledge.

1486. But surely you would not put any obstacle in the way of his being discharged?—No; in the case of a foreigner, I would give him an ordinary discharge, stating that he was engaged in a foreign port for a British ship, and that he was discharged on a certain date. I would give him an ordinary discharge, but not a continuous discharge book, so that he would not be put upon an equality with fully-qualified British sailors on our ships.

1487. I see you say in the précis of your evidence, "We are further of opinion that if a continuous form of discharge is adopted no entries should be made in such discharges for character or ability." You have explained that that is in order to prevent a master giving a wrong or unjust character?—That is so.

1488. You stated that you would not object to a man voluntarily going to the master and getting a record of his character or ability endorsed on the back of his discharge?—Yes, but I would like to add that if the Board of Trade adopt the idea of having any record of character or conduct or ability inserted in a continuous discharge, seamen who feel aggrieved should have a right of appeal to some competent court.

1489. That might be a question to consider if a character certificate were made compulsory, but I don't suggest that. I am merely suggesting a voluntary method, and, of course, the remedy in that case would be to refuse to have the certificate of discharge marked with any record of character at all. Of course you don't suggest that a court of appeal should be provided under the voluntary system?—Oh no.

1490. I see you further say, "We believe that the time has arrived when men who have committed offences on board ship, or have been charged with acts of insubordination, should be tried before a competent tribunal." What do you suggest as a competent tribunal?—I suggest that a sort of Marine Court might be established, composed of shipowners, captains, engineers, and seamen, and that not less than three of these marine J.P.'s, or whatever they may be called, should attend each day, if necessary, at the Mercantile Marine office to hear any cases which may require trial. It has been suggested more than once that the Marine Superintendents should have magisterial power to try such cases, and

pass judgment upon them, but we don't believe in that; our reason is that the Mercantile Marine Offices are now very largely under the control of the local marine board, which is largely composed of shipowners. We therefore suggest that a sort of Marine Court should be established; it would not do to suggest that the ordinary police court should be depended upon, on account of the difficulty and delay and trouble in applying for summonses and getting them heard; this might often be a cause of serious detention to a ship which may arrive in port one day and be ready for sea the next. We therefore think you would require a special court to deal with such cases.

1491. Why?—I may quote the case of a vessel trading from London to New York; the captain during the passage missed some stores, somebody stole some whisky, but he said nothing to the seamen until they got to New York. They were to leave there on the Sunday, and on the previous Saturday night he called the men aft, and said, "I have lost so much whisky, and I am determined to make all of you pay for it. I am going to charge you 12s. 6d. per man." There was a revolt at once among the men, who said, "You don't know whether we are guilty or not. Find the guilty man and punish him; but you are not going to punish us all for an offence we have not committed." On the Sunday morning, when the ship had to leave, the whole 24 men went ashore. No doubt the captain anticipated this trouble, for he had another crew ready and left with them. His former crew could not see the Consul on Sunday, but they reported themselves to the Consul on Monday, and he sent them home. The captain had no right to leave his men there. When the men arrived home we sued the captain for their wages and for damages, and it cost that captain some four or five hundred pounds. When the magistrate decided against him, he deliberately went from the magistrate's court down to the shipping office and gave every man a discharge marked "deserted in New York," and declining to report. This was, of course, a very wrong thing to do.

1492. (Captain Chalmers.) The men got their money?—Yes.

1493. (Chairman.) Then that shows that under the present system there are safeguards against wrongful action on the part of the master?—Yes, against stopping wages we are always safe. We can always in such a case sue, and we do.

1494. Do you propose to set up an elaborate jurisdiction of marine justices of the peace to attend every day at the shipping office merely to deal with cases where no wages have been stopped and no fine inflicted?—I can assure you I am not at all anxious about these courts or for marine justices of the peace, but it is the shipping people who say that they have no power of maintaining discipline on board a ship and no sufficient control over their men. Some of them even go so far as to say that they should have the right to inflict personal punishment on the men; to knock a man down or ill-use him. Others think that there ought to be a rough and ready sort of justice meted out to sailors, that if a captain enters an offence in the log book they should simply go before a magistrate, who should have power to decide the matter without any appeal.

1495. Then you advocate these marine courts on behalf of what you call the shipping people?—Yes, I am advocating them as a substitute for what they require.

1496. (Captain Chalmers.) To strengthen the discipline?—Yes, that is so. The captain usually feels that he can depend upon his officers, who are looking forward to promotion. If a mate or a second mate refused to endorse a captain's entry in the log book, that would mean the end of his career, so far as that company or firm was concerned. I have known cases where mates have lost their employment in that way.

1497. (Chairman.) Do you mean that if a seaman was accused of being drunk, and the officers did not think he was, and did not believe it, that they would nevertheless agree to sign the log?—I can give you a worse case.

1498. I am not speaking of one case. Do you mean that that would happen often, or as a rule?—It might happen often. I don't mean that there are many cases where captains say men are drunk when they are not drunk, but I know that there are often alleged offences entered in the log book which are not really offences, and which are yet witnessed by officers.

1499. (Mr. Howell.) You suggest that the mates would be rather disposed to agree with their superior officers?—

Yes, but as a matter of fact, I may repeat that I don't think there are many cases where a man is falsely charged with being drunk.

1500. (*Chairman.*) I understand you don't set much store by these marine courts?—No, but I do think that if you are going to make an alteration at all, and want to prevent desertion and insubordination on board ship, of which there is more than enough, then you must set up some machinery to do it. I would prefer the ordinary magistrate's court, but for the difficulty arising from the time it would take before a summons would be granted and the case tried, therefore, if any change in that respect is made it should be by some kind of court on the spot that could deal with a case at once.

1501. I don't know why there should be any change at all in that respect, because the present system is perfectly adequate. You have quoted cases to us in which men who were aggrieved obtained redress, and you have said more than once that there are not many cases in which men are falsely alleged to be drunk. When these facts are taken into account there is not very much left, is there?—That refers only to our side, but from the other point of view there are hundreds of cases where men commit offences and are not prosecuted because of the want of time to do it, because the vessel has to sail so soon; offenders are thus allowed to go free because the captain has not time to take proceedings against them.

1502. (*Mr. Clark Hall.*) You spoke of the number of desertions as about 14,000 a year, and you said there might be double that at the end of two years, but these are desertions, not deserters. A vessel may make many voyages in a year, and each voyage may have its quota of desertions; should not the number of desertions be divided by the number of voyages, in order to arrive at the number of deserters?—I don't think that. If these were desertions in ports of the United Kingdom that might be so, but seeing it is principally abroad that men desert you can rely on at least 10,000 of these cases being actual desertions.

1503. By different men?—Yes.

1504. Would you double that next year? I suppose good men don't desert at all, although bad men may desert frequently?—I believe good men often get out of ships as well as bad. It depends a good deal upon the ship, and not altogether upon the man.

1505. You are suggesting a very large proportion of deserters?—Many of the desertions are really not due to any fault on the part of the men. If a man is on a very uncomfortable ship he may well want to get out of it.

1506. The present form of discharge contains columns or discs for "G," "V.G.," or "decline to report." What distinction do you draw between "G." and "V. G."?—"G." is always classed as a bad discharge. A seaman has just about as good a chance of getting a ship with a "decline to report" on his certificate as if he were discharged with a "G."

1507. But some lines use only the "G." Does that tell against their men?—These men confine themselves usually to their own line. I know that several lines don't give anything else but "G.," and, of course, the "G." in those cases is as good as the "V. G." in some other ships.

1508. But if one of their seamen go to another line, or to another firm, does the "G." tell against him?—It may do, unless the captain or engineers happen to know the system under which the man has previously worked, otherwise the "G." would tell against him very much.

1509. (*Captain Chalmers.*) Do I understand that you approve of these continuous discharges being in book form?—Yes. I have always had a preference for the separate certificates, but if a change is to be made I think the certificates should be in book form, like what the Naval Reserve men have, with the name of the ship and of the man, the date he joined, the date of his discharge, etc.

1510. And with the back of the certificate blank, so that the seaman could have it filled up in accordance with the option already given to him, under the Merchant Shipping Act, of having his character endorsed on his certificate?—I would rather dispense, if possible, with any character being put on the back at all. If a seaman wants a reference he should apply to the captain, or have a separate one in writing.

1511. Do you advocate the taking away of the choice which the seamen now have, and the making it compulsory that if a man wants a character he must have it on a separate form?—I would rather leave it voluntary.

1512. The present position is that when a man is discharged he can tell the captain whether he will have the report of his character endorsed upon the back of his discharge or written out on a separate sheet, but apparently you want to alter that, so that the option would be taken away from him—I mean the option of having his character endorsed?—I don't want to see it on his certificate at all.

1513. Then you want that option to be taken away from him?—Yes.

1514. And to make it compulsory that if he wants a character he must have it on a separate form?—Yes; I am willing to accept that, although I think that any record of character is of little use.

1515. If you are not in favour of records of character, does not the present position of things commend itself to you, namely, that it is absolutely in the seaman's power to take or refuse a character just as he likes. Why do you want that altered?—I have advocated all through that no man should be engaged unless he has got a certificate; upon that the present Government have said, "We are considering the question of a continuous discharge," and I say if you adopt anything of that sort, make it compulsory, but without any entry for character or conduct. If you make a continuous discharge compulsory it would itself become almost tantamount to a character certificate. There would be no substantial difference between the two.

1516. You advise that the book form should be the only form approved by the Board of Trade?—That is so.

1517. I suppose you understand that the law does not insist upon provision for a record of character being necessarily made, but simply that the seaman shall have an option of having a report of his character, either separately or endorsed upon his certificate?—If that is the state of the law I think that, in a short time, the majority of seamen would not bother to have any character inserted, except, perhaps, men who wanted to pass the Board of Trade examination. The majority of other men would not apply for a character.

1518. Would you favour the idea of leaving the back of the certificate blank, so that the seaman at his own option could have it filled up with some record of his character if he desired it?—Yes, I should be quite satisfied with that.

1519. Do you think that if masters got into the practice, as they might do by instruction from their owners, to compel men, when offering for engagement, to produce their book, that that would be just as good as if it were made compulsory by legislation?—No, I don't think so.

1520. Why not?—It would not work at all. In a short time there would be no attention paid to it.

1521. Would your opinion be changed by the fact that we have had evidence both from owners and masters that they would be only too glad to put such a system into force?—Not a bit. The Federation have been trying to force their book on the men for nine years, but comparatively few seamen have got it. Eighty or ninety per cent. of the officers may have it, but if you come down to the actual sailors, I am prepared to say that not ten per cent. have the Federation benefit book, which has been attempted to be forced upon them.

1522. Do you actually think that if a continuous book form came into force the masters would not bother their heads to ask for it?—They would, to some extent.

1523. Is it not now generally the practice amongst masters to ask for discharge certificates?—Yes.

1524. And is it not general for the master to take possession of the certificate, and keep it during the rest of the voyage?—Yes.

1525. Why should the same thing not be done, if the form were changed from a separate slip to a book?—If it is not made compulsory, I believe that in a short time a very large number of the men will be without books. They would not care for the books unless compelled, and when a man lost his book by desertion or some other cause, he might not apply for another, and in a short time the system might fall into disuse.

1526. (*Mr. Clark Hall.*) At the present moment, the seamen do appreciate the value of a discharge certificate; why should they not still more appreciate, or at least equally appreciate, the greater value of a continuous discharge?—I can get as many discharges as ever I want. I can get hundreds of discharges in no time. Men write in hundreds to the Registrar General's office in the

*Mr. J. H.  
Wilson, M.P.*  
13 July 1899.

*Mr. J. H. Wilson, M.P.*  
 13 July 1899. course of the year for them, and send up the necessary sixpence. The copy sent down is as good as the original, and I honestly believe many of the crimps make a regular trade of sending up to the Registrar General for these certificates.

1527. If it is so valued now in the present form, that men will pay fourpence for it, and take all the trouble to get it, would not the continuous discharge book be more valuable, and why should it fall into disuse?—I don't see that there would be much difference between that and the present system. I don't believe it would carry us one step further.

1528. If the Board of Trade approve of a continuous form, as the only official form, and if one of the conditions is that before it can become valid the date of engagement has to be entered in at the time of engagement, would not that make it compulsory?—It would to that extent. But how could the Board of Trade grant books to men who had never been to sea before? If a captain brought into the Mercantile Marine Office a man for whom he wanted a book as an able seaman, the official might decline, unless there was evidence that the man had been four years at sea. But in the case of a fireman the superintendent would have to accept that man as a fireman, whether he had been to sea before or not.

1529. It would be the master who would accept or reject him, because I suppose you understand that the superintendent is only a witness to the engagement, and that the engagement itself is perfectly free between master and man?—That is so.

1530. (*Mr. Howell.*) You say that the superintendent can decline to have a man signed on as an A.B. unless he can show four years' service at sea?—Yes.

1531. I ought to tell you we are advised that the superintendents have no such power, and that all they can do is to make a note against the entry that four years previous sea service has not been proved?—I think the Act is very clear upon that, and that the Board of Trade instruction went beyond the law.

1532. You hold that when a man cannot prove his four years the superintendent has no right to enter him on the articles?—Not as an A.B. I don't say he could not, in any other capacity.

1533. (*Captain Chalmers.*) If the book were produced at the time of engagement, and kept in the master's charge during the voyage, what do you say should be done with it in the event of the man deserting?—If my idea was adopted, that book should be returned to the Board of Trade.

1534. I am speaking about desertions not in the United Kingdom, but abroad?—In that case the book should be returned to the Consul, and if a man failed to join the captain would return it to the Consul at the first convenient port, unless the vessel was itself coming to the United Kingdom, in which case the book could be brought to the Mercantile Marine Office.

1535. If the seaman afterwards presented himself at the Consul's office he would be confronted with that book, and made to take it, although it would register desertion?—Quite so.

1536. If, however, the seaman came home in another ship and had not his book, he would have earned the

right to another book by the return voyage, but could be prevented by the Registrar General from getting one because his old book was still in existence. Would the fact that the old book contained a record of desertion not tell against the seaman?—I think not. When men are crowding round the officer who is engaging a crew he has not time to scan closely the discharge certificates which they show, especially as some of the Mercantile Marine officers don't write copper-plate, and it might often be difficult to trace entries of desertion, but if the officer had time to examine the papers and go through them deliberately an entry for desertion might tell against him.

1537. Is it not the fact generally in English ports that the mate has at least a day for engaging his crew?—In many cases, yes.

1538. And by searching the certificates he has the power and opportunity to protect himself against taking a man who is a constant deserter?—I don't think a mate would object because a man had always deserted, because when his attention was called to the fact, the man might say, "Oh, yes, but that was a very bad ship, a very hungry ship."

1539. If the captains and mates are so careless as not to take any further notice in such cases, what would be the advantage of a continuous record?—Personally I don't regard it as of very much use, but if we are to have a change I would prefer the continuous record to the present form of discharge, unless the latter be a simple plain certificate of service.

1540. (*Mr. Howell.*) I have carefully read over the summary of your proposed evidence, and most of the things you propose would, I think, involve fresh legislation?—That is so.

1541. Now I should like to get your opinion as to what we can do under the existing law, and whether that would, to any material extent, meet your views. It would require legislation to make a certificate compulsory in the sense that no man should be allowed to sign on without producing it. What we can do without legislation is to supersede the present sheet certificate by a continuous certificate of discharge, leaving the seamen clearly the option whether they will have any record of character at all, and if so whether they will have it endorsed upon that certificate or written upon a separate sheet?—That would undoubtedly be some relief to the seamen, but I would almost be disposed to advise the Board of Trade not to interfere with the matter until they have made up their mind to legislate upon it.

1542. You think that a continuous system might not be efficient without legislation?—It might do some good, but not much.

1543. From the point of view of the seamen, you think it scarcely worth while to disturb the existing state of things for the sake of so small a change?—Yes, and a great number of owners and captains agree with me.

1544. Every single witness before us, so far, has recommended a system of continuous discharges as decidedly preferable to the present system, but I understand you think it might be comparatively useless until we can do something more effective by means of legislation?—That is my opinion.

(*Chairman.*) We are obliged to you for your evidence.

## SEVENTH DAY.

Friday, 14th July, 1899.

PRESENT :

Mr. W. J. HOWELL (*presiding*).

Captain A. J. G. CHALMERS.

Mr. CLARK HALL.

Mr. HIPWOOD, *Secretary*.

Mr. J. E. FOLEY, called ; and Examined.

Mr. J. E.  
Foley.

14 July 1899.

1545-S. I believe you are the secretary of the Bootle and Liverpool branches of the National Sailors' and Firemen's Union?—Yes, sir.

1549. And you have had twenty years' experience in the engaging and discharging of seamen both in ports of the United Kingdom and in the principal ports of the world?—Yes.

1550. Now will you tell me what has been the nature of your own experience?—I have been a seaman and a petty officer, a quartermaster, a boatswain, a boatswain's mate.

1551. And when did you leave the sea?—About eighteen months ago, I think.

1552. Then you have had quite recent sea experience?—Oh, yes.

1553. And what has been your experience of the certificates of discharge now in use?—Well, I do not think much of them, sir, because I never could depend upon them getting me employment. These are the last certificates of mine (*handing in certificates*.)

1554. What period do these certificates cover?—Just a voyage.

1555. I mean what period of time, from the earliest to the latest?—I do not know whether it is five or six years.

1556. About five or six years?—Yes.

1557. Are these discharges all V.G.?—Yes, all.

1558. Is it your experience that masters do not look at these certificates when you apply for a ship?—They look at them, but very much as a matter of form. I have always had to depend on this sort of thing (*handing in written testimonials*) to get me employment, independent of those discharges.

1559. Your experience has been that you have had to depend rather on special testimonials than on certificates of discharge to get you employment?—Yes.

1560. Do masters usually ask you for special testimonials or do you tender them voluntarily?—They look for them. They are taken in preference to the discharges. Another thing is the Board of Trade require them for certificates, you know.

1561. Will you tell me what your objections generally are to the present system of discharges?—Well, it is not a true record, but depends more on the will of the captain whether you get a true record or not of your character both for conduct and ability.

1562. Is it not the individual opinion of the master as to your conduct and ability? Is not that exactly what it professes to be?—Yes, but sometimes that is not the case. For instance, a man may get a discharge from a ship which, though it is not a bad discharge, amounts to the same thing, because it is marked "decline to report." Then, again, a man who may not have been guilty of any offence for which he would have been logged or punished is liable to receive this bad discharge. I have known it to be given to men in cases where there has been a dispute between the captain and the men, and the captain has lost and the men have gained their point. I have known it to be the case that a whole crew has received a bad discharge.

1563. Your case is that masters give both good discharges and bad discharges without due consideration of the circumstances?—Yes, sir.

1564. That they give good discharges to bad men and bad discharges to good men?—Yes.

1565. And that for some petty reason?—Yes, some whim of their own.

1566. What is this case of the *Georgian* you are going to tell us about?—That is the case of a man who was paid off in Liverpool out of the *Georgian* as an able seaman and he had only been at sea a month before previous to this. This man was not a competent seaman. He had no appearance. He was quite slim and could not do his work, no matter how long he had been at sea, judging by his physical appearance.

1567. And he was shipped as an A.B.?—He was shipped as an able seaman. I met him at the Liverpool shipping office and I asked him how long he had been at sea, and he told me a month.

1568. He had been at sea a month before this, and he had a discharge as an able seaman?—Yes.

1569. Tell us as shortly as you can the circumstances of this case?—This is the way they work it in Liverpool. Men sign on a ship, and it may be they are competent men. These men fail to join at the time they are ordered to join. Then there is an agreement in existence between the shipowners' agents—I do not know about the shipowners personally—but between the shipowners' agents and the boarding masters, and they take any men that the boarding master has down to fill these vacancies, and these men sign on articles in the same position as the men whose places they are taking. There is a danger in that in big steamers. It has often been said that seamen are not now required to be seamen, but there is no doubt that there is more special knowledge of the sea required in practice on board ship nowadays than ever. Just take this point. If it was the *Campania*, where men like this had to save life and take to the boats—

1570. I am reluctant to interrupt you, but you are going rather away from this case of the *Georgian*. Please tell me about that?—That is all. This man was discharged as an able seaman from the *Georgian* after one month's sea service.

1571. He was given a "V.G." discharge as an able seaman?—Yes, a "G." discharge. (*Witness handed in the certificate*.)

1572. He was given a "V.G." for character and conduct and a "G." for ability. So in giving him this discharge they seem to have had some regard to the fact that he had behaved himself, and, so far as his conduct was concerned, they gave him a "V.G." For ability they only gave him a "G." So there was some deduction from an absolutely good discharge. A "G.," I think, is often regarded as, at any rate, not so good as a "V.G."—We call it a good discharge.

1573. Of course, your point is that he was given a discharge as an able seaman when he could not have had service qualifying him for that title?—Yes.

1574. And then can you give us instances where competent seamen of good character, holding records of years

Mr. J. E.  
Foley.

14 July 1899.

of good service, say they have been given discharges marked "decline" for insufficient reasons?—Yes, here is a case.

1575. What was the man's name?—Bernard Dowdell. He went six voyages. Five of his discharges were returned very good for conduct and ability.

1576. These were his first five voyages out of six?—Yes. The sixth voyage he makes he gets a character for conduct "decline to report."

1577. Was that in the same vessel?—Yes.

1578. And with the same master?—Yes, the same master.

1579. Under what circumstances was that bad discharge given to him, do you know?—There happened to be a little grievance between the captain and the men—the engineers and firemen—about getting up some coal for the cook. It has always been the practice in steamers to give these men who get up coal for the cook a little bit extra in the way of food, because they do it at the time they are supposed to be sleeping. On this voyage that extra allowance of food was stopped, and the men declined to get up any more coal for the cook. This happened about three voyages before this man was discharged from the ship. When the ship returned it was put on the Articles and made part of the agreement the men signed that they should get up this coal for the cook. It went on all well that voyage, and the captain took it off the Articles the following voyage, and the first time the coal was required for the cook there was a little bit of disturbance, and the captain sent forward for one man to come aft and put the case before him. This man was a pretty old hand in the ship and he was nominated to go aft and put the case of the men before the captain. The captain decided in favour of the men, and he made an order that the steward was to give this extra allowance, and things went on as usual. When the ship returned this man got a bad discharge for conduct and was dismissed from the ship. His case was so strong, and feeling ran so high about this thing, that not a man wanted to go in the ship again. His shipmates wanted to see him get a good discharge, and the remaining firemen refused to sign on again at the time the ship was signing on. Consequently the ship had to put off her signing till the following day. The next day the shipping master went up before ten o'clock to the north docks and signed some men on board this ship at the north docks. This was before the hour that the signing business is generally commenced. It is generally at ten o'clock that the signing commences, but this was considerably before ten o'clock—it was about nine o'clock. These men signed in the ship not knowing that this bother had occurred, but they supposed it a strange thing that the ship signed in that way, and they inquired. I did not know anything about these men signing. On the Sunday morning the ship went another voyage, and out of the whole crew only about five joined.

1580. Five out of how many?—Twenty-eight or thirty-two, I think—I am not quite sure. I know I counted myself the men going on board. There were old, decrepit men and youngsters going on board as firemen. I counted twenty-six, and three came back.

1581. Then the fact that the men agreed with your view, that this man was treated unjustly, is the main reason why that ship was delayed considerably, and finally sailed with a very incompetent crew?—Yes, I wrote to Leylands', the owners, about it, and asked if they could not see their way to give this man a good discharge or offer him employment again and prevent this thing happening again, but they did not answer this letter.

1582. What you suggest is that he was punished for acting as the representative of his messmates on the ship?—Yes.

1583. Why do you think that a system of continuous discharges would effect an improvement in cases of that kind?—It would not effect any improvement in this kind of case. The effect of this now is that this man has gone to sea with an old discharge. If he had to fix this bad discharge in his book it would appear as part of his discharge that he has to produce to get employment.

1584. Then your point is, that, having got that bad discharge, he sets it on one side—either tears it up or does not use it—and goes on his old discharges?—Yes, that is the correct point.

1585. Then I take it to be your opinion that certificates of continuous discharge should be made compulsory?—Yes.

1586. That is your opinion?—That is my opinion.

1587. Is it your opinion that these continuous certificates should contain simply the record of service, or should they also include character for conduct and ability?—I hardly think it would be just to the men to allow a captain to have the autocratic power of determining whether a man should be employed elsewhere or not if he does not employ him himself.

1588. You think a seaman should have the option of saying whether he would have a character or not?—I think it ought to be taken out of the hands of the captain altogether.

1589. What would you put in its place?—He can prove that he is a competent seaman, and that is all that is required. A man wanted on board ship must, in the first place, be a seaman. It does not matter whether he is a Christian or a Mahomedan. These written certificates—these written records—will always be used. If a man has a good character he can always get a writer character.

1590. I think you have a little missed my point. Do you think a continuous record of service should contain a man's character or that it should not?—Just merely his service.

1591. It should simply be a record of service?—Yes.

1592. If a man chooses to have a character it should be given to him, or a separate document?—Yes. It should be left optional.

1593. Suppose a man chooses to have it marked on the back of his certificate, do you see any objection to that being done if he agrees to it?—No.

1594. But he should not be forced to take a certificate of discharge which contained a record of his character?—That is what I think.

1595. Is there anything you would like to add to the statements you have already made?—We know it is especially necessary that discipline should be maintained at sea, more so than in almost any other position, because if a sailor is a bad character or incompetent, the captain cannot replace him during a voyage. If a continuous discharge system were adopted, the books should only be given to men who have first proved their competency and justified their rating. The seaman should have proved his qualifications before getting a continuous discharge certificate.

1596. Do you mean that prior to a man being engaged on board ship in a certain capacity he should produce some evidence that he is fit for employment in that capacity?—Yes.

1597. That a fireman, for instance, should be able to show that he has previously acted as a trimmer?—Yes.

1598. And that a man who ships as an "A.B." should show that he has had some experience, and that he possesses some of the qualifications of an "A.B."?—Yes.

1599. You know that all that would require legislation?—Yes, I know it would require an alteration in the law. I have known of cases where some of our big ships going out to sea from Liverpool have had nearly all their firemen seasick. I have known of men engaged in that capacity who were quite unaccustomed to the work and found it too much for them, and it has been the cause of their death. There was one case last December. There was a seamen's dispute in Liverpool, and a lot of inexperienced men were signed on as firemen, one of whom met with a violent death through nothing but his own sheer incompetence.

1600. You mean that he was not fit for the work and succumbed to the effects of it?—That is so. Other men lose their lives or commit suicide through not being trained or used to the work of the stokehole and engine-room.

1601. Before a man is shipped in any given capacity you think he should show by some means that he is fit?—Yes.

1602. These suggestions of yours, whether good or bad in themselves, would require legislation?—Yes.

1603. Then let us now consider what can possibly be done without legislation, to meet your views. Suppose that, instead of the present sheet certificate of discharge, the Board of Trade adopted a system of continuous discharges, and issued only one form, viz., the book form, so that everybody on being discharged would be obliged to have that book, do you think that would be desirable, and would it effect any improvement on the present state of things?—Yes, it would be better than the present form; but is there not something behind this—some talk of a second form of discharge?

1604. Various propositions have been placed before this Committee, and we need not discuss them at the present moment. Perhaps you are thinking of a seaman's character upon one document and his record of service upon another?—If the continuous discharge is passed we would like it to be compulsory, so that if a man lost his discharge he must get another.

1605. The seaman must take the form of discharge approved by the Board of Trade. Let us proceed on that assumption. Would the continuous form be an improvement?—I think it would.

1606. You think that a continuous form of discharge in place of the present system would be a distinct improvement?—Yes.

1607. Will you tell us, shortly, why?—It would prevent a lot of incompetent men getting to sea, and would prevent many desertions, as the men would not have any old discharges to fall back upon. The whole of the seaman's record of service would be in the hands of the owner or captain of the ship in which he was serving.

1608. And a system of continuous discharges would enable a seaman to show exactly what sort of man he was?—Yes.

1609. Would not the seamen value a book with such a complete record more than they value the present separate sheets?—Yes.

1610. Upon the whole, for the reasons you have given us, you are in favour of a system of continuous discharges?—Yes; made compulsory, and each man who holds them being competent.

1611. That is rather opening up another question. For the moment I want to confine attention to the question whether under the present law, a system of continuous discharge is preferable to the present system?—Yes, I would consider it better.

1612. Is there anything else you would like to add?—I think that is all.

1613. (*Mr. Clark Hall.*) You are aware, of course, that some masters give a V.G. discharge or a G. discharge to equally good men?—Yes.

1614. Is there any hardship upon the man who gets the G. discharge?—Yes, it is in one sense. The Cunard company gives only "G." The captain of a strange ship might refuse employment to a seaman who could produce only a "G." discharge, whilst he would employ a "V.G." man.

1615. The master might think the character of the "G." man doubtful?—Yes.

1616. Would you, therefore, recommend that either "G." or "V.G." should be cut out, and that some such description as "fair" or "moderate" be put in place of "G."?—No, I would not alter that much.

1617. (*Captain Chalmers.*) If the continuous discharge form was adopted as the only form approved by the Board of Trade, you would advocate it being given up at the time of engagement to the custody of the master?—Yes.

1618. And that the entry of the engagement should be made in the book there and then?—Yes.

1619. So that if the seaman deserted?—He would have some trouble to get a new book.

1620. If he gets the book, the discharge column would be blank, which would show that he had deserted from his ship. Do you think that would be any hardship?—No, it would be no hardship. I think no man should be employed unless he produces his book of continuous discharges, which will be handed back to him with the entry made in it when the voyage is completed. We all agree with that; but much of the advantage of that system would be lost if you allow captains to engage men without books.

1621. You think it should be made compulsory by law for a seaman to produce his book at the time of engagement?—Yes, or give some good reason for not producing it.

1622. And that no seaman should be engaged unless he does produce his book?—I should certainly stop any man from being engaged who could not produce his book. He may have done some wrong, and it would destroy much of the good of the system if the book can be dispensed with.

1623. Don't you think when the owners and masters find this book to be the only form of discharge approved by the Board of Trade that they will themselves demand the production of the book at the time of engagement, and

will refuse to ship a man who does not produce the book?—Yes, they do demand that book. The man will be asked for his discharge, and if he does not produce it they will probably refuse to ship him, but there are cases where masters or mates of ships have a friend who wants a voyage for the good of his health, and such a man is taken on the crew, and I suppose would have to receive a continuous discharge book, although he was no good on board. It would be well if it were made compulsory that men should produce their discharges at the time of engagement and hand them over to the captain. That would prevent any desertion, and would do a lot of good to shipowners.

1624. If that is done, how are you to provide for the men who go to sea for the first time?—Such a man would have to go as an ordinary seaman.

1625. Then you would not object to a man presenting himself without a book to be signed on as an ordinary seaman?—Oh, no; we must do that to provide for a future supply.

1626. You quite understand that that would require legislation?—Yes.

1627. Do you think it is worth while?—I think it is. I may mention there are thousands of good seamen working now at the docks at Liverpool on account of the hardships that exist on board ship and because of the treatment they get.

1628. Do you recognise that if your suggestion were put into force it would exclude foreigners?—No.

1629. I mean to say that if a Swedish ship paid off its crew at Liverpool, and two or three who spoke English came to the shipping office and presented themselves for engagement, but they could not be taken on on account of not having a book?—They would have their discharges from the foreign ship.

1630. You would accept that?—Yes, I would accept their legal discharges; we cannot order the Swedish Government to alter their laws to suit us.

1631. Do you see that the result of what you propose would be that a lad of eighteen who wanted to go to sea and presented himself at the engagement table would not be allowed to ship as anything but an O.S.—is that right?—Yes.

1632. Well, suppose he goes and does a voyage of a couple of months up the Mediterranean and comes back, and that he has done so well on the steamer, learned to steer, learnt the compass, was able to go aloft, etc., that the master gives him an A.B. discharge?—I don't think that would be right. I don't think that a voyage up the Mediterranean would ever make a sailor.

1633. How are you to prevent the captain, who has for years been the sole judge of what a man's rating should be, from calling that man aft and making an entry in his log book to say he has found the man so industrious and able that he is putting him on A.B. pay from that date, and then afterwards paying him off as an A.B.?—I should have no fault to find with that if a man was an able seaman.

1634. In the master's opinion he is?—The master might have that opinion without sufficient justification.

1635. How are you going to check it, as the rating rests with the master?—By requiring a certain term of apprenticeship.

1636. Then would you reduce all men to one dead level?—No, a man before he can be a mate of a ship must have served a certain period at sea, and it is equally necessary that before a man is allowed to steer a valuable ship perhaps with passengers, he should have proved his competency and have had some experience at sea.

1637. I am supposing that he has proved his competency to the satisfaction of the master. Who is to step in and say to the master, "You are not and cannot be the judge"?—I should like it to be laid down that every man must have served so many years at sea before he could claim as an A.B.

1638. Would you require that every man who had served three years as an ordinary seaman should become an A.B.?—Yes.

1639. Do you not recognise that that would let in, regardless of the captain's decision, a lot of men who never really could become able seamen?—That has not affected other trades which seem to manage very well with apprenticeship. Take the case of joiners. A man might serve a lifetime and never become a first-class joiner, still he becomes a joiner after having served a certain time of apprenticeship to the trade. The probability is that

Mr. J. E.  
Foley.

14 July 1899.

Mr. J. E.  
Foley.

14 July 1899.

three years' experience as an ordinary seaman would qualify almost any man to rank as an able seaman.

1640. Have you not come across some lads of eighteen who after twelve months at sea are fit to be rated as ordinary seamen?—Never in my life.

1641. I mean in sailing ships?—It would be an utter impossibility to make a sailor in that limited time. No doubt experience in a training ship might be allowed to decrease the length of time a lad would have to serve as an apprentice, but the work done at sea is different from that done on board a training ship.

1642. In what respect do you think that an intelligent lad of eighteen, after twelve months' service at sea, would fall short of showing himself an able seaman?—In the first place he would never have had experience of any great peril, and it is only by being actively engaged at sea for some years that one gets to know what to do in a time of emergency. If a man has been only twelve months at sea it may happen that he has never met a gale of wind. A man may make one or two voyages with sunshine nearly all the way, but it is hardly to be supposed that a man could be three years at sea without meeting with some rough experience, and in times of bad weather I have found some men as timid as children.

1643. Then it is a question of nerve and not of handicraft, and would a young man such as I supposed fall short in the matter of handicraft?—He would.

1644. In any other point?—I would say that he could not thoroughly know his work. He might understand the theory of the management of sails and rigging, but he would not know how to put it into practice.

1645. Have the able seamen the management of the sails?—They have to know everything.

1646. With regard to furling and reefing?—A boat-swain is only an able seaman, but singularly enough mates are not required to be sailors at all, except for the purpose of getting certificates.

1647. You hold that the continuous form should be simply a record of service, but that if the seaman wishes it he may ask the superintendent to endorse upon it the report of his character from the official log?—Yes.

1648. Or that he should do without it if he prefers that?—Yes.

1649. Or ask the captain for a separate testimonial?—Yes, most men would ask for their character to be endorsed if they had good character, and the man who did not ask for it would probably be one who had done something wrong.

1650. It is not endorsed now if the seaman does not wish it?—It may be that the man who had not his character endorsed would be put down as a bad character, simply because he had exercised his option.

1651. How can you stop that unless you take away the option from the seaman altogether?—I should say that the character and conduct should be altogether taken off the discharge, and that if the seaman wants a character certificate he should ask for it, and obtain it on a separate form.

1652. (Mr. Howell.) But you told me you thought that the option should still remain with the seaman of either having his character endorsed on the back of his certificate, or having it left blank, or taking it upon a separate document?—I did say that, and the majority would probably require their character if it was left that way.

1653. Don't you think they should have the option?—Yes.

1654. A man who had a bad character, or who had done something wrong, is not asked to have it endorsed?—No, he need not have it unless he wants it.

1655. You still adhere to your opinion that the seaman should have the option?—I should prefer to see the record of character and conduct off the discharge.

1656. Yes, but would you still give him the option?—I think the Board of Trade should have nothing to do with it.

1657. The seaman can either take it if he wishes it or leave it, the option remaining with him?—Yes.

1658. (Captain Chalmers.) In the case of a seaman losing his book, do you object to a small fee being charged for a duplicate so as to make them more careful?—I think there ought to be a small fee charged in such a case.

1659. Somewhere about the value of the book?—Yes.

1660. (Mr. Howell.) Have you anything else to say?—I repeat that I think the record of conduct and character ought to be altogether off the discharge.

1661. I understand you to say that if a seaman chooses to have some endorsement of character on the back of a certificate, or on a separate paper, he might have it, but you want to provide for the seaman who prefers to have his certificate simply as a record of service?—Yes.

1662. On the other hand, if he wants to have his character on the back of the certificate he should have it?—Yes, if he cares for it, but I should prefer that every seaman should take a blank one. The necessity for records of conduct and character would be very largely done away with under a system of continuous discharges. It is well known that the existing discharges are not a true record of a man's character.

1663. If provision were made that a seaman must not be forced to take a character, would that meet your views?—Yes.

1664. You do not think that any seaman should be forced to take it, but that he should be allowed to take it if he wants it?—Yes.

1665. (Captain Chalmers.) You say in the last paragraph of the précis of your evidence that you think there should be power to suspend a seaman's continuous discharge certificate?—Yes.

1666. Do you agree with stopping a man's livelihood?—No, but it is stopped in other ways. The Marine Boards and Courts sometimes withdraw or suspend the certificates of captains and other officers; when a seaman has been guilty of any offence, the matter should not be left in the hands of the captain only, but the case should be tried before a competent tribunal, and if the seaman was clearly in the wrong his discharge might be suspended for a few weeks, or even months.

1667. Don't you think that that would be strenuously opposed by the seamen as a body?—I think that in many cases the men could have nothing to say against it.

1668. Don't you recognise that it is a very arbitrary power?—It is better than the existing power of the captain, which is now the only power, and against which there is no appeal.

1669. How do you mean that the captain's is the only power?—In such cases the captain can practically deprive a man of the power of earning a living.

1670. But the seaman need not take a character from him, and could refuse to receive any record of character?—That would amount to about the same thing. If the master has not reported, it may be considered a bad discharge.

1671. Do you advocate the seaman's discharge certificate being taken from him for a time as a punishment for certain offences?—Yes, by the authority of a proper tribunal if the offence is serious enough.

1672. (Mr. Howell.) You recognise that a good many of your proposals would involve legislation, which, of course, takes time?—Yes.

1673. But you hold the opinion that a system of continuous discharges, even under the present law, would be preferable to the existing system of separate discharges?—Yes.

1674. You recognise that under the present law we cannot prevent a seaman having his character endorsed on his certificate if he prefers it, but he can refuse to have it, and can either take his certificate quite plain, or he can have his character upon a separate document. Having regard to all these circumstances, do you still think that the system of continuous discharges would be beneficial to the seamen as a whole?—Yes.

(Mr. Howell.) We are much obliged to you for your evidence.

Mr. DAVID J. KENNY, called ; and Examined.

1675. (Mr. Howell.) I understand you are secretary of the Birkenhead branch of the National Sailors', Firemen's and Fishermen's Union?—Yes.

1676. And you are also a member of the Birkenhead Town Council?—Yes.

1677. Will you tell me what your experience at sea has been?—I have had an experience of twelve years at sea in the capacity of seaman and petty officer. I have had about nineteen years' experience of the engagement and discharge of seamen in various parts of the United Kingdom, American ports, and ports in the East Indies. My opinion is that the present discharges are altogether misleading, and are no guide whatever as to the real character or ability of the man who holds it. I have seen many instances where totally incompetent men have been discharged with V.G., and other instances where men who were anything but well behaved have nevertheless been given V.G. discharges for conduct, just as good as the men who have behaved well all during the voyage. The master or officers may have been moved by sentimental reason at the end of the voyage, or may want to get quietly rid of the man. I have known of cases where men have obtained berths partly perhaps through influence, who have not the qualifications to entitle them to their rating; but such men may go from one ship to another—making only one voyage in each, because the captain would not have them for a second—and each time they are certified as fully qualified, getting their V.G., to which they are entitled by the Board of Trade.

1678. You speak of the V.G. to which they are entitled by the Board of Trade; what do you mean by that?—I don't mean to say that they are virtually entitled to it, but that the Board of Trade recognises it as an official form of discharge. Of course, the Board does not warrant the man that he shall have a V.G. discharge.

1679. The V.G. or the G. is an expression of the personal opinion of the master as to that particular man, and it is not in any way dictated by the Board of Trade?—I understand. There are firms and companies within my knowledge which do not certify any man as V.G., but only as G.; when these discharges are presented elsewhere they are apt to raise a certain amount of doubt as to whether the man is fully qualified and as to how he will behave during the course of his employment.

1680. We understand that there are differences of opinion as to the exact meaning of the letter G. used in that connection, some regarding it as indicating a bad character and some regarding it as equivalent to the V.G.?—Yes. If a man has misbehaved himself he can be properly dealt with at the termination of the voyage, and there should be no necessity for making any report of his character upon his discharge certificate.

1681. You are of opinion that if a system of discharges were to be introduced they should be simply a record of service?—Yes.

1682. Are you aware that under the existing law the seamen can refuse to accept any character?—Yes.

1683. He can exercise his own discretion, and can take no character, either good, bad, or indifferent, if he prefers to accept his discharge unmarked by any record of character?—Yes, quite so.

1684. Or if he prefers it he can say, "I will have my record of character on a separate sheet"?—Yes, but many seamen are not aware of that.

1685. You know it?—Yes, personally.

1686. To prevent seamen from taking any character, and to secure that the system of continuous discharge shall always be nothing but a record of service, would require an alteration in the existing law under which the seaman can exercise an option?—I quite appreciate that. I believe it is sufficient for a man to have a complete record of his service, to be kept and certified in a continuous form of discharge, but to my mind it would be very desirable that the seaman should be able to give some proof of his competency.

1687. I understand that is an expression of your individual opinion upon a point outside the scope of this Committee's inquiry?—If a man presents himself with only one discharge he is asked whether he has not been more than one voyage in the ship; if there is an interregnum of any long period between the man's last engagement and the engagement he is about to undertake he is generally asked how he has spent the time in the interval. Many men who possess only one discharge have

a difficulty in getting employment unless they have influence.

1688. Why have they only one certificate of discharge?—Because the captain or engineer with whom they served does not desire to carry them a second voyage by reason of their incompetency or otherwise.

1689. They give him a good character, but they don't themselves want to take him again?—Yes.

1690. You think that the V.G. discharge is often given too lightly without sufficiently considering the man's real qualifications?—That is what I gathered. In the case of many officers and engineers sentiment creeps in, and, after the voyage is ended, they reflect that it is very hard for a man to be prevented, perhaps, from getting chances of employment elsewhere, and so they say nothing against him. At the end of the voyage a man may ask the master or chief engineer to be kind enough to give him a certificate or reference, and that is of more value than the whole of the discharges he might produce. That is my experience.

1691. How do you think that a system of continuous discharges, if introduced, would benefit seamen or do away with the evils you have indicated?—In the event of continuous discharges being adopted, if the certifying for conduct were omitted and the certificate were merely a record of service, the master or engineer who had reason during the voyage to complain of a man might easily report the matter, say, to the Local Marine Board.

1692. You are again suggesting an alteration in the law. Do you think that the substitution of a continuous discharge form, under the existing law, would be an improvement on the existing system of separate discharges, and, if so, why?—The continuous discharges should be made compulsory, and not optional.

1693. You mean that the form of continuous discharge should be the only form approved by the Board and used?—Yes.

1694. You think that would be an improvement on the present system?—Yes.

1695. Without interfering with the present law as to giving character?—Yes. The continuous record should show the whole experience of the seaman from the beginning.

1696. Do you mean that the two or three voyages which he might, in the first place, make as a boy should be recorded in his certificate, and then his service as an O.S., and then as an A.B.?—Yes.

1697. But take the case of a man who is shipped first as an O.S. or as an A.B., you could not get so complete a record of him?—It is hardly conceivable that a man should be shipped right off as an A.B. It would be scarcely fair to competent men that a greenhorn should be taken haphazard and engaged, and afterwards discharged as an A.B., just as if he were properly qualified.

1698. You think that a fireman should not be taken on as a fireman before he has served some probation as a trimmer, and that a sailor should have some sea experience as an O.S. before he becomes an A.B., but that requires an alteration of the law which I want to keep out of our present discussion of the case?—That makes the matter all the more difficult.

1699. You think that a system of continuous discharges would be preferable to the present system, if made compulsory?—Yes.

1700. And only one form approved by the Board of Trade?—Yes.

1701. You see no objection to a seaman having his character endorsed on the back of his certificate if he likes?—No. In support of my contention that a man should have some form of certificate that would show he was competent, here are certificates dating from May, 1838, for large steamers. In the last voyage across the Atlantic the man is struck down with illness, just as we all are prone to be incapacitated from work by such a cause as rheumatism. He voluntarily offered to go on deck and do what he could with one arm. At the end of the voyage "Decline" is written upon both the spaces for character and ability. Now that is a hardship to an able seaman of thirty-five years, who is qualified physically to perform the work if he has not had the misfortune to be struck down with illness which was nobody's fault. Now if that had been a continuous discharge running over ten

Mr. David J. Kenny.

14 July 1899.

*Mr. David J. Kenny.* or fifteen years, the last bad record might have blotted out the whole of his previous good record.

14 July 1899. 1702. If a man had a good record for all these years, don't you think a master would set that against the one exception, and at least give the man an opportunity of explaining?—Yes, I hope he would.

1703. Don't you think he would?—Yes, I think so.

1704. Don't you think a captain would give such a man employment?—I think the average master would. I have here a case of one man who attempted to serve an apprenticeship to a trade, but he proved a failure and went to sea, but never made more than one voyage in a ship; now, nothing is more detrimental to the chances of making headway in the service than the continually moving from one ship to another. It looks bad, on the face of it, if a man is constantly changing without sufficient reason, although, of course, there are times when a man cannot help it.

1705. Don't you think a master in engaging a seaman would weigh such a consideration as that?—The seaman might have only one discharge at hand at the time.

1706. Naturally, in that case, he would not stand such a good chance of employment as another man showing a good continuous record?—Not in a competitive sense.

1707. Would not that be the same in any employment?—Perhaps so, but that is the class of men you have to deal with.

1708. Is there any other point you would like to mention?—I don't think there is anything more, especially seeing that many of my suggestions would interfere with existing legislation.

1709. I have been anxious to avoid that, and have only asked you, therefore, whether it would be an advantage to have, under the present law, a system of continuous discharges?—I think it would.

1710. (*Mr. Clark Hall.*) You have spoken with approval of the practice which is growing up of engineers giving special certificates of character?—Yes.

1711. Is that general at all?—Pretty general in the event of a man having a length of service.

1712. But you would hardly take that as a substitute for the report on character by the master which the seamen are not entitled by law to demand?—No, but in the case of firemen it often happens that a reference of this kind has great weight in view of future engagements. Many of these men have an intimate knowledge of engineering, and are most useful. If a man is skilful, intelligent, and industrious, the chief engineer will give him a reference which will enable him to get other employment. A man who takes deep interest in his work may be exceedingly useful in the event of a breakdown, and get promoted for special service.

1713. That sort of character is totally different from the kind of character contemplated to be given by the master?—Quite so, the man has that in addition.

1714. (*Captain Chalmers.*) If these continuous discharges were put into book form you would consider that the handiest form?—Yes.

1715. About the size of R.N.R. books?—Yes.

1716. You think that on the face of the form there should only be entries of the name of the man and the ship, the date of engagement and discharge, etc., and that there should be nothing more on the face of it as to the man's character?—Nothing more.

1717. If the back of the page were left blank the seaman could exercise his option as to having his character stamped there or left unrecorded. Would that commend itself to you?—Yes, it would.

1718. And that when seamen presented themselves at the engagement table, they should be asked to produce their books?—Yes.

1719. And would you advocate the date of engagement being entered on the book then?—Yes, when the man was engaged. At present it is often not entered until the end of the voyage.

1720. You think it should be entered at once?—Yes, directly the man is engaged.

1721. And the book handed to the master?—Yes.

1722. And the seaman would not object to the master keeping the book the whole voyage, would he?—I should think not. My discharges have been in possession of a chief officer for sixteen or seventeen months in the case of a long voyage.

1723. You never had to complain of the discharges being lost or mislaid?—Never.

1724. You have always had them handed back to you intact?—Yes.

1725. If the masters and owners insisted upon the production of these books at the time of engagement, don't you think that would be useful?—It would be a great improvement on the present system.

1726. Do you think it would put a stop to many failures to join?—Yes, it would have a tendency to diminish that evil to a great extent.

1727. In the case of a man losing his book when drunk or otherwise, you think he should go to the Registrar-General for a duplicate, for which he might be charged a fee?—Yes, certainly some charge ought to be made for the duplicate, so as to prevent the man being too careless.

1728. It would not be a hardship to charge a fee?—No, the present fee is reasonable enough; the men don't object to that.

1729. It would be a little more if we charged the value and the certificate were in book form, but probably you still think that not a hardship?—I don't think it would be.

1730. (*Chairman.*) Is there anything else you would like to lay before us?—I think not.

(*Chairman.*) We are obliged to you for your evidence.

## EIGHTH DAY.

*Tuesday, 18th July, 1899.*

PRESENT:

Mr. W. J. HOWELL (*presiding*).

Captain A. J. G. CHALMERS.

Mr. CLARK HALL.

Mr. C. HIPWOOD, *Secretary*.

Mr. J. HENSON, called; and Examined.

*Mr. J. Henson.*

18 July 1899. 1731. (*Chairman.*) Will you tell me what your present position is?—I am secretary to the Sailors' Union at Glasgow.

1732. How long have you held that post?—At Glasgow, for about fifteen months.

1733. Before that were you at sea?—Before that I was secretary at West Hartlepool for about two years. I was at sea for about twelve or thirteen years.

1734. How long is it since you left the sea?—It is about three years now.

1735. Will you tell the Committee what your opinion is with regard to the proposal to establish continuous

certificates of discharge for seamen in place of the present system of single discharges?—Well, the seamen of Glasgow, and I myself, think that the present form of discharge is of no use at all, and we prefer a certificate to be issued, so that each man would have one. But we would not object to a continuous discharge if it were made compulsory.

1736. With regard to certificates, I think we must put that aside, as it is not within the terms of reference to this Committee. You are, of course, speaking of the proposal in Mr. Havelock Wilson's Bill in Parliament, which has now, I believe, been withdrawn from this Session. We must keep the discussion away from that.

and discuss the question of continuous discharges. Will you give us your opinion about such discharges. Do you think that they should be compulsory?—Yes.

1737. That there should be only one form approved of by the Board of Trade, and, therefore, the discharge must always be given on this form, which is a continuous one?—Yes.

1738. You do not mean that no man should be shipped without a continuous discharge, do you?—I mean no man shall be shipped as an able seaman unless he can show some service before that as an ordinary seaman or in some capacity as a seaman; that no man shall be shipped as a fireman unless he can show some service as a trimmer.

1739. That would involve fresh legislation, so that question is scarcely before us now. To require that a man, before being engaged as an A.B. shall show a certificate as ordinary seaman, or before being engaged as a fireman to show a certificate as a trimmer, would require fresh legislation?—I do not think it would be necessary that there should be fresh legislation, because the Board of Trade, at the present time, though they cannot compel a man to show service can ask him to show four years' service before signing on as an able seaman.

1740. You refer to the Section of the Merchant Shipping Act, which says no man shall be entitled to the rating of A.B. unless he can show four years' service before the mast. The Board of Trade have been advised that they cannot interfere with rating, and, though the superintendents have been instructed to put "N.P." against the names of seamen who do not prove that service, the Board of Trade have no power to say "You shall not take that man because he cannot show that service."—Our contention is that many men have shipped as able seamen who are not capable of doing the work, and are therefore, a danger to the ship and to the lives of the men on board. Many men are shipped who do not understand the English language and who do not understand the work they are put to do. Our contention is that the men who can show this service should have preference of employment before men who do not understand anything at all about the sea. Of course, it is a great danger to myself as a seaman if a man is shipped who is incompetent. I have not only to do his work, but he is putting me in danger of my life whilst he is in charge of the ship and in charge of the lives on board.

1741. Then, really, you advocate, I think, in common with other representatives of the Union who have been before us, a system of rating together with the continuous discharge. You advocate that a man should not be allowed to ship as a fireman until he can show service as a trimmer—that a man should not be allowed to ship as an A.B. unless he can show service as an ordinary seaman, and that a man should not be allowed to ship as an ordinary seaman unless he shows service as a boy. Whatever may be said in favour of that, it is a little outside the purview of this Committee. We have to consider whether, under the existing law, some system of continuous discharges can be substituted for the present system of single discharges, and that is rather the point that I want to put to you. Do you think it would be an advantage to substitute such a system of continuous discharges for the present system of single discharges?—It would be a great advantage to the men, because if you had a system of continuous discharges, and a man held his continuous discharge, it would be an encouragement to him to act soberly, and to do his work on board ship, and many captains would give preference to men with these discharges. At the present time there are any amount of men who go to sea for one month out of twelve, and who get discharges for good conduct and ability to which they are not entitled at all. There are other men who ship who cannot do the work. I have had cases where men have been shipped, and where I, myself, have had to do their work. I have had cases where men have done long service—six or seven years in two vessels, three years in each vessel—and have had good discharges, but perhaps during the last month or so they have objected to do something they thought was unnecessary, and they have received a bad discharge, and in consequence of that could not get employment.

1742. Then you think that a system of continuous discharges would have the effect of making such men value their discharges more than they do at present?—Yes.

1743. They would be more careful not to get a bad discharge?—Yes, they would be more careful.

1744. You recognize that such a system would be an advantage to a master. It would enable him to see what sort of men he was engaging?—Yes; it would be a great advantage to a master. It would ensure him getting a steady class of men.

1745. Is it your experience that masters are careless in giving characters? Do you think a man sometimes gets a "V.G." when he does not deserve it?—Certainly. I have men's names who have obtained "V.G." discharges for conduct and ability when they are not entitled to them at all.

1746. On the other hand, you think men sometimes get a bad discharge when they do not deserve it?—Yes, in many cases, and they have no appeal against it.

1747. Is it your experience that masters are considerably more inclined to give good characters than to give bad ones?—In some cases a captain will give a man a good character. We will say there has been a collision, and the captain requires a man's evidence to support him. Although that man may have been rough during the voyage, on account of the evidence he gives he receives a good character. In another case, a man—as I myself have been—has been over eight voyages in the same vessel, and has received discharges marked "V.G." for conduct and ability. Then, on account of the vessel being over-loaded and being detained, I have received a bad discharge. This stops me from obtaining employment if I show this discharge.

1748. I gather that you think discharges are given rather recklessly?—Very recklessly indeed.

1749. A "V.G." does not always mean that a man ought to have been given a good discharge, and a bad discharge does not always mean that a man has been a bad man?—Yes.

1750. You think that a system of continuous discharges would have a good effect in that direction?—It would have a splendid effect. It would have the same effect as a man's Naval Reserve certificate has. He takes a great deal of care of it, because it is a continuous record of his service. If a continuous discharge was in force he would take just as much care of it.

1751. If a man had had several good discharges and then a captain gave him a bad discharge, do you think that that bad discharge appearing in his book would have the effect of preventing a man from getting an engagement again?—In many cases it does. And not only that. If he is a seaman and he should have to go up for a second mate's ticket, this bad discharge operates against him. He cannot put it in to show for service, and, in consequence, he is perhaps delayed for two or three months in obtaining the position he wishes to get.

1752. As regards the form of certificate. Do you think it should be simply a certificate of service or should it be a certificate of service plus a certificate of character and ability?—I have no objection, and the seamen have no objection, to its being a certificate, not only of service, but of character and ability, provided that in a case where a captain has a spite against a man and gives him a bad discharge for character and ability, he should have some court of appeal to which he can go.

1753. That, again, would require legislation. Do not you recognize that the expression of opinion given by a master at the end of a voyage is the expression of his personal, individual opinion of that seaman? What is there to appeal about?—It is not the expression of his personal, individual opinion. I have found cases—one I have just mentioned—in which, simply because a man refuses to work for an hour, although he has six or seven discharges from the same captain expressing a good opinion of him, the last discharge he gets expresses a bad opinion of him.

1754. It does not follow that because a man has been a good seaman for six voyages he may not have behaved badly on the seventh?—At any rate, a man has no appeal against a bad discharge.

1755. You would be in favour of a court of appeal in these cases. That would require legislation. There is no provision in the Merchant Shipping Act for any such appeal. For the moment, therefore, we must leave that out of consideration?—The only provision in the Merchant Shipping Act is for an appeal to the superintendent of Mercantile Marine.

1756. To settle small disputes. There is no appeal to him as to character?—When the matter is put to him the superintendent declines to interfere.

1757. You recognise that your proposal, whatever may

Mr.  
J. Henson.  
18 July 1899.

Mr.  
J. Henson.

18 July 1899.

be its merits, would require legislation?—Well, yes. I think it would require a little legislation.

1758. Now, at the present moment, under the existing law, it would be open to the Board of Trade to approve of a form of continuous discharge as the only form of discharge to be given. A seaman would then have the option of having his character written on the back of that certificate or he could decline to have a character put on his certificate at all. So if he chose to have simply a record of his service without a character at all, it is quite within his option to do so under the existing law. And if he chose he could have a separate document giving him his character. Do you think a system based on that principle would be likely to have a good effect if the Board of Trade instituted a system of continuous discharges?—Do you mean that a seaman could have a record of his services as one certificate and could also have a record of his character for another certificate?

1759. If he chose. What I mean is this. Here is a continuous discharge book. A man will have it as his certificate of service, and then, if he chooses to say, "I should like to have my character on the back of my certificate of service"—supposing the back is left blank—he can have it stamped on the back with an india-rubber stamp. If he were a good man, and cared to have his character recorded on the back of his certificate of discharge, he could do so. If he preferred to have simply a record of service, he could say to the superintendent, "I should like my character on a separate sheet," and he could have it. Do you think a system of that sort would be likely to have a good effect?—It may have a good effect, of course, supposing that it was separate. If the service was in front and the character at the back, then a man would prefer a record of his character as well from the captain.

1760. On the back of his certificate?—Yes.

1761. Most men would?—Yes.

1762. It would mean that if a man did not care for his character to be marked down, and it was not put down, a captain would give preference to a man whose character was so marked?—It would, under that system.

1763. On the other hand, if a man expected to get a bad discharge, instead of taking it on his book and so spoiling his record, he could have it on a separate piece of paper, which he could do what he liked with?—If a man expected to get a bad discharge he would not ask for it.

1764. If he expected to get a bad discharge he would not ask for it? That would be the effect of it, and he would not be obliged to foul his certificate?—Yes.

1765-7. You have a statement there?—Yes, and I could hand it in.

1768. Perhaps the best way would be to give your evidence from it in your own way. If you have any particular or illustrative cases to put before the Committee, please do so?—Very well, sir. On April 24th, 1894, I shipped in the S.S. *William Cory* at West Hartlepool. One of the men who had been signed on as a fireman had been brought out of the workhouse and was dressed in the workhouse clothes, when he signed in the Shipping Office. He had never been to sea before in any capacity, but was thought to be some relation of the owners, Messrs. Jobson and Co. He was not able to do any work; and when we arrived at Shields he jumped overboard, being mad with the drink, but was rescued. He was taken to the Shipping Office and was discharged, being given a discharge for good conduct and ability. In that case the vessel carried only four firemen, and it was what is commonly called a stiff job. There should, indeed, have been six, and there was quite enough for every man to do even with four at work, but with one of them lying up and knowing nothing about the work, the three had to work extra time. The fourth man was drunk the whole of the time, yet, as I have said, when he arrived at Shields, he was actually given a good discharge for conduct and ability. Therefore, although he had no experience, he could go to another captain and hand in his discharge, recording that he was a steady, capable man, so that, perhaps, he would get employment where a steadier man would be refused.

1769. How would that be altered by a system of continuous discharges; how would such a system prevent that man shipping?—We say that such a man should not be engaged to fill that capacity.

1770. You mean that there were few enough firemen even if they were all efficient, and that, as this man was

not efficient, his messmates were overworked; but how would that be altered by a system of continuous discharges without an alteration of the law as to rating?—I don't see how it could be fully rectified by a system of continuous discharges; but if that man had received a discharge which recorded that he was not capable of doing his work, he would have been refused work—he would have been refused further employment at sea.

1771. You think that under a system of continuous discharges he would have been more likely to get a true character than under the present system?—Yes.

1772. That a master would be more careful in stating a man's qualifications or the want of them?—Yes. The next case I want to mention is that of the S.S. *Talley Abbey*, of Cardiff. On May 26th, 1894, I shipped in this vessel at West Hartlepool. The cook who signed in the vessel was brought on board by the Board of Trade official. He had never been to sea before, having been a barman in a public-house in Middlesbrough, and did not know which part of the ship he lived in. The steward left at once, on account of this man being engaged. He caused great dissatisfaction during the voyage on account of not being able to cook. Yet he was given a good discharge for ability and conduct at Newport. This case can be verified by Hugh Kelly, at present steward in the *German Empire*, of West Hartlepool, who was steward in the *Talley Abbey*.

1773. You put that forward as another case of a man shipped in a capacity for which he was totally unfit?—Yes.

1774. And the same arguments apply as in the previous case?—Yes, and it was a place where good efficient men could have been found.

1775. I suppose few things cause more dissatisfaction on board ship than bad cooks?—Bad cooks cause more dissatisfaction than anything else.

1776. Do you think seamen would be anxious for a system under which cooks would have to show, before engagement, that they are fit?—Seamen are in favour of certificates being granted to cooks by a school of cookery.

1777. That, again, would require legislation?—Yes. The next case I have to mention is that of the S.S. *Indrani*, of Glasgow. A Russian, named Karl Frohm, was engaged at Hull and sent to Glasgow during a dispute. He was engaged on the 12th of December, 1898, and discharged on the 18th of January, 1899. He could not speak one word of English, and had to have an interpreter. He had never been to sea before. Age nineteen, and born at Riga. His only sea experience was coming from Riga to Hull as a passenger. I have that man's discharge, certifying that he was very good for character and ability.

1778. As an ordinary seaman?—As an able seaman.

1779. After one voyage, and he had never been to sea before?—Yes. Of course, a man could not become an able seaman in one trip; yet he was engaged upon a vessel which carried forty or fifty passengers, and in case of danger of a collision, as he could not understand the orders given to port or starboard, he might turn the wheel the wrong way and cause disaster.

1780. Your point is that he was not only incompetent as a seaman, but that, even if competent, his ignorance of our language might have led to danger?—Yes. Another case occurred on board a vessel called the *State of California*. A. Brown, fireman, went on shore at New York to get his toe dressed, having had it cut off by an accident the trip before. He told the second engineer that he was going to the hospital for that purpose. Before leaving New York he was logged six days pay for having gone ashore without leave of the captain and received a bad discharge. He had been two trips in the boat.

1781. Your point there is that a man was given a bad discharge without sufficient reason?—Yes.

1782. Is it not quite conceivable that he may have deserved the bad discharge?—No; the reason it was given to him was simply that he had gone ashore to get his wounded foot attended to, the accident having happened on the same vessel. With regard to the screw-steamers *Coningsby* and *Staincliffe*, I, James Henson, was in these vessels on a voyage to the Mediterranean and Black Seas. Whilst in the Black Sea loading they were overloaded, and on coming to Malta for coals the whole of the men refused to proceed to

sea in the vessel until the cargo was discharged. This was done, sixty tons of cargo being taken out in either case. I and the whole of the crew received bad discharges for conduct and ability. I had eight discharges from the S.S. *Staincliffe* before this, each of them being marked V.G., and one from the *Coningsby* marked V.G.

1783. In that case you allege that you were given bad discharges because you refused to proceed in a ship which you regarded as unseaworthy?—Yes, it was overloaded.

1784. What was the result; was she lightened or detained?—She was detained until an official at Malta made her lighter.

1785. Then the complaint you made of overloading was sustained?—Yes.

1786. Nevertheless you got bad discharges, and you think it was because you refused to sail in an overloaded ship?—Yes, we demanded our rights under the Merchant Shipping Act. I had been in the vessel for sixteen months, and had had good discharges. The next case I want to mention is that of the ship *Harvest Queen* and the S.S. *Kastalia*, of Glasgow. A Norwegian named John Gorsen, staying at 120, Broomielaw, has two discharges, one from *Harvest Queen*, engaged 19th April, 1899, at Mobile, discharged 1st June, 1899, at Belfast; and the other from the S.S. *Kastalia*, engaged at Greenock, June 6th, 1899, and discharged at Glasgow 4th July, 1899, each marked V.G. for conduct and ability. He cannot speak one word of English. I contend that a man cannot be a thorough seaman when he cannot understand the orders given to him.

1787. He had been for two voyages?—Yes, one was in a sailing ship and the other was in a steamer. He was engaged in the latter on the discharge from the former.

1788. Were they both rather short engagements?—The first was for six weeks, and the other for a month and one day.

1789. Was he young?—He was twenty-six years old.

1790. Could he not pick up enough of the language in that time to deserve his discharge on the second occasion?—No; only a fortnight ago I was speaking to him, or trying to get him to understand me. I could get him to understand me in German, but not one word of English, except yes or no.

1791. So that at the end of the two voyages you say he was still absolutely ignorant of English, and, therefore, a danger to the vessel?—Yes, and one of the vessels was a passenger steamer, on which he had to take his turn of the wheel.

1792. Have you any other cases to tell us about?—Yes, there is the case of the S.S. *Addington*. J. K. Howie, 145, George Potts Street, South Shields, and J. Coutts, 5, Bothwell Lane, Sunderland, were discharged from the ship at Glasgow on June 15th, 1899. They were given bad discharges through refusing to work to put shifting boards up at sea after working all day. We obtained the money for them, as the captain was in the wrong. J. K. Howie has three and a half years' service in the ship *Auchanclairn*, of Maryport, and reference from master of the same; two years in S.S. *Tennyson*, and references from Captain Bailey, of *Strathaylon*. He had never received a bad discharge before.

1793. Well, but supposing the captain deemed it necessary that these boards should be put up at sea, would you not expect the men to make an effort to do it?—This was on a voyage outward bound, and the vessel was simply to be four days at sea. They had been working on the average from twelve to sixteen hours a day, and were entitled to some rest. They said they were quite willing to do it after tea, but they should like their tea first. The captain was entirely in the wrong, for although he had entered them in the log book, he withdrew the charge and paid them the money for which they had been logged.

1794. I don't want to express an opinion on the matter without knowing all the facts, but if I were the master of a vessel I should regard myself as the best judge when a thing should be done. If I said it was to be done before tea, and the men did not do it, I am afraid I should not think much of those men?—The discharges were marked bad for conduct and ability,

and one of the men had been three and a half years in the vessel—a record service.

1795. You think the bad discharge was given for insufficient reasons?—Yes, but the men had no court of appeal.

1796-1799. Do you think that a system of continuous discharges would be preferable to the present system, and that it would have a good effect?—Yes, it would have a very good effect. I know that personally I should prize the continuous discharge, whereas I do not greatly prize the present form of discharge.

1800. A continuous system you think would be popular with the good seamen, and would have the effect of steadying those who were inclined to be unsteady?—Yes, it would have a good effect in steadying the bad or doubtful seamen. It is said that from ten to fourteen thousand men now desert in Continental and American ports, but, if the continuous system were in force, and the captain had these discharges in his care during the voyage, that would tend to keep men from deserting, because a seaman would know that he could not get another vessel without his discharge.

1801. Then you think the continuous discharge system would have a good effect in that direction also?—Yes.

1802. (*Mr. Clark Hall*.) Are you aware that some masters only give G. certificates to their men, no matter what the variations in their character may be?—Yes.

1803. Have you ever had that experience yourself?—No, I never had a G.

1804. Would you think it rather hard lines if you got into an employment where nothing better than G. was given?—I should think it very hard lines. I have a set of discharges with me which are only marked G., although the owner of them made twenty-two trips in the same steamer. When that man applied to another captain, and presented his discharge certificates, he was refused, and told that he could not be a capable seaman or he would have had something better than G. for conduct and ability.

1805. Was he refused merely because he had G. instead of V.G.?—Yes. It is usual to give a man V.G. when he has a good character.

1806. Would you be in favour of an endeavour being made to draw a clearer distinction between G. and V.G. We understand that G. is supposed to indicate moderate or indifferent. Would such an adjective be better than the letter G.; would the word moderate or some other term of that sort meet the difficulty?—No, because I think if a captain found a man presenting to him a certificate marked moderate he would think the holder was a man of very poor capabilities indeed, whereas the same captain might have a higher estimate of the man's character with the letter G. I think the marking of the certificates with the word "moderate" would have a very bad effect.

1807. Then how would you get over the difficulty of drawing proper distinction between G. and V.G. when the former letter G. is really taken by some masters to mean V.G.?—G. is not taken by masters to mean V.G.; it is more commonly taken to mean bad.

1808. Some masters, however, and some firms never give anything but G., as they think that G. is about as much as you can say of a man. How would you meet such cases?—My contention is that if a man could show four years' service, he could scarcely be given a discharge marked G. for ability, as he could not be considered much of a seaman if he was not able to claim V.G. after four years' service.

1809. If a master gave him a G. after four years, some would think him a very doubtful seaman?—Yes.

1810. And would not employ him?—Yes.

1811. What is the usual estimate of G.?—The same as "decline to report."

1812. Can you propose any substitute for G.?—No, I am not prepared to propose any substitute; where a man has been an ordinary seaman for only two years, and then is engaged as an able seaman, G. might be good enough for him; but where he has been four years at sea as an able seaman G. would be against him, and I think a man should have a court of appeal in a case like that. I produce a set of discharges all marked G. from the same vessel, the *Mongolian*, belonging to a man who was afterwards refused an employment on account of the nature of his certificates.

Mr.  
J. Henson.  
18 July 1899.

Mr.  
J. Henson.  
18 July 1899.

1813. (*Captain Chalmers.*) I see that these discharges are signed by different masters?—Yes; but the fact of a man being engaged so many times on the same vessel surely shows that he must be a good seaman; nevertheless on another vessel he was refused an engagement.

1814. So long as the character given is given by the master as his individual opinion of the seaman, how can you object to it?—We don't object to the master giving the character, but what we do object to is that the seaman should have no chance of appealing against the master's decision.

1815. But the seaman has the right to refuse to have any character at all, has he not?—Yes; but it is not one seaman in ten thousand who knows that.

1816. Do you think if seamen generally knew it that that would remedy the injustice?—I don't at all think it would. The only thing that would remedy it would be to give the seamen some kind of appeal.

1817. Suppose there was an appeal, how are you going to prove that the master did not act on his own individual conviction? Would he not say to the complainant: "I am not giving a character in accordance with your ideas of what is good or bad, but in accordance with my own experience of you," and to the court of appeal, the captain might say: "You were not on board the ship to judge of the circumstances, whereas I was."—He might do that, but that does not remedy the grievance felt by the men. As a seaman, I have had between thirteen and fifteen years' experience, and I have never been logged for drunkenness or anything of that sort, and yet, although I have good references for conduct and ability, extending in some cases over two years in the same vessel, I received a bad discharge at last on account of a spite of the captain, and I have no appeal whatever against that. I cannot appeal to the Board of Trade, and the only thing I can do is to summon the captain for defamation of character; but he may be a thousand miles away before I can do so.

1818. Were you not aware, when you accepted that character, that you could decline to have it marked on your discharge certificate?—I was not aware.

1819. Or you would have done so?—Yes.

1820. Suppose you have six discharges from one ship signed by the same master with V.G. for conduct and ability and the seventh is "decline to report," owing, as you allege, to some whim of the captain, do you think that that would have any effect upon another master, who thought of engaging you? Would he not say: "Here is a case of six to one against the man being a bad one"?—In many cases he would simply look at the last discharge, and would say to the man: "I will not engage you." He would not bother to look at the others at all, but would say: "I see you had a bad character in your last ship."

1821. Have most seamen, when applying for employment, been in the habit of only handing in their last discharge?—Yes, that is what is required by the officer of the ship. In many cases if a seaman receives a bad discharge he simply tears it up. It may have been for a long voyage, and the officer or captain may inquire the reason why the man had been so long ashore. He may possibly look at the previous discharge as if it were the last one, and it may not be a bad one, but the engaging officer would usually prefer a man who had more recently come from sea, so that an inferior man may be chosen and the other may have to step aside. It would be better if the continuous discharges were adopted, and if the men had some right of appeal.

1822. Have not the seamen had it in their power, for some time past, to put practically into force a kind of system of continuous discharges, because they have been able to buy covers in which they could place a succession of discharges; would not that amount to a continuous record?—In some cases it would, but it is not many seamen who do that; perhaps one man out of every hundred.

1823. Do you think that a class of men who are, as you say, so careless that they do not take such care of their single discharge sheet, will take care of them when the discharges are given them in book form?—Yes, if it is made compulsory.

1824. Supposing the system is made compulsory, and that a continuous form is the only form used, do you think that they will take any more care of their books than they now do of their single discharge certificates?—Yes, a

great deal more, because at present many seamen who live in boarding houses have some discharges in one pocket and some in another, and get careless of them and the sheets get lost, whereas under a discharge system they would take care of their books, and would know that if they lost the books they would have little chance of getting employment, whereas now, if they lose or withhold or destroy one or two discharges, they still have a chance of getting employment.

1825. If the continuous system is adopted, will there be any objection on the seaman's part, when seeking an engagement, to his being called upon to produce his book to the captain?—None at all.

1826. Would he object to the captain retaining it during the whole voyage?—No.

1827. You think that should be done?—I think that should be the system.

1828. And when he is engaged, should the entry of engagement be made there and then on the form?—Yes.

1829. Or would you prefer to wait until the end of the voyage?—The entry of the engagement should be made on the form at once, and at the end of the voyage the entry of discharge should be made, but if the system were made compulsory, I don't believe in the captain having the charge of the book. I think that when a captain has signed his crew on and the shipping master has witnessed his engagement, the book should be returned to the shipping office, and should afterwards be sent to the place where the ship is going, so that they can be got when the vessel arrives. I suggest this because in many cases captains are careless in regard to the men's certificates, and they get lost, and men have to pay for fresh copies of them; besides, if a ship went down the seaman might be saved, but the continuous discharges might be lost.

1830. Do I understand you to mean that in the case of a vessel sailing from here to Valparaiso that the book should be sent on afterwards?—That the book should be retained here by the shipping office, and that when the vessel was likely to return to England the books should be forwarded to the port to which she was coming.

1831. Suppose that a certain number of the men fall sick during the voyage, or get other employment, or by mutual consent want to be paid off in Valparaiso, how would you arrange that?—The captain would not discharge them, even if they did get other employment, because that might mean that he would have to pay higher wages; he would prefer to bring the same men back to England. If a man fell sick, and was put into the hospital abroad, he would be sent back by the Consul or by the owners to the port in England from which he shipped; the owners would have to do that.

1832. You don't think the books should go in the ship in the captain's charge?—I would not altogether object to them going in the ship, but I think it would be better if they were left, because even after a man has engaged he might unfortunately be taken ill or some calamity might occur at home which would necessitate his staying at home, and if his book went in the vessel it might mean that he could not get employment until it was returned, whereas, if it was left in the shipping office he could go there and state the facts of the case, and if the shipping master knew the facts to be true he could give him the book.

1833. When a vessel sails, and the master at the last moment has to engage substitutes in place of those who have failed to join, he has to send back by the pilot or somebody else at the last moment a form called Eng. 2 showing changes in his crew. Would it not meet the case if he sent back with that form the books of those who failed to join?—Yes, that might do. I have explained why I wished the books to remain in England. Personally I never missed a vessel but once. She sailed from Hartlepool, and was going to Shields to load, but through a death in my house I could not get down to the ship in time, although I did join her at Shields.

1834. In case of a seaman losing his book and having to apply to the Registrar-General for a copy or duplicate of it, would you think it a hardship if the seaman was charged a fee for that?—Not at all.

1835. You think he should be charged a fee?—I think he should.

1836. (*Mr. Howell.*) Is there anything else you wish to add?—Nothing.

We are obliged to you for your evidence.

Mr. JAMES BENNET, called; and Examined.

Mr. James  
Bennet.

18 July 1899.

1837. (Mr. Howell.) I understand you are the district secretary of the Sailors' Union at Goole?—Yes.

1838. And you have come to give us evidence with regard to the proposed system of continuous discharges for seamen?—Yes.

1839. How long have you held your present position?—In 1872 I got my first certificate as 2nd officer, and some years later I got my 1st officer's and master's certificates. Then I got incapacitated from going to sea through an accident. I fell down a hold, and have not been to sea since. It is six years since I ceased going to sea.

1840. Have you held your present position ever since?—Only for three years.

1841. What were you doing the rest of the time?—Nothing.

1842. Will you give us shortly your views with regard to the question of continuous discharges?—Yes, I am glad to have the opportunity of doing so, because I have had experience of seamen in all parts of the world both on steam and sailing vessels. I have seen forty vessels at a time waiting at San Francisco for grain cargoes, and I have had every chance of knowing about the discharge and shipment of crews and the devices used to get seamen to desert.

1843. And have you arrived at a conclusion as to the value or the reverse of the present system?—I am of opinion that the present form of discharge is practically useless for the purpose for which it is granted. A seaman does not value the certificate he gets now, and if it is not good he may tear it up and throw it away, coupled with some abuse to the captain who gave it him. Men can get a new discharge whenever they want to ship. A boarding-house master can provide one for a man. A man's appearance often gets him a ship without a discharge. A practical master or officer can usually judge by a man's appearance whether he is a real sailor. It may not be so easy to tell what his real character is, and whether the man is insubordinate or unsteady, but one can generally tell whether he is a sailor, and often a man who gets drunk sometimes on shore turns out to be the best man at sea. At all events, most of the men do not value the present discharge. The more respectable class of men who are anxious to get on stick to their discharges, but even if they lose one they can buy another for a shilling.

1844. Then I understand that you think the present system has broken down, and that it is useless?—Yes.

1845. And that V.G. discharges are often given to men who do not deserve them?—That is very common. During my experience at sea as officer I have selected many men with discharges marked V.G. for character and ability, and when out at sea these men have turned out to be the opposite.

1846. And sometimes, you think, a master when he is angry gives a bad discharge to a man who deserves something better?—Yes, that happens sometimes. I have known many instances where men with excellent character and the best of behaviour have received discharges marked "decline to report" simply because towards the end of the voyage they have shown their dissatisfaction at being overworked.

1847. But I suppose these cases have not been so frequent as those of men who have received a rather better character than they deserve?—Probably not. When a vessel is coming home there is always much extra work, cleaning, painting, and so on, in order that the vessel may look well in returning to port. The men may feel dissatisfied about the extra work, and growl about it, and there may be a little animosity in consequence, and although the same sailors may have been the best seamen and well-conducted throughout the whole voyage, yet they may get a bad discharge at the end. On the other hand, captains are sometimes troubled by having men imposed upon them who are not fit. I have been at San Francisco nine or ten times and have seen many crews supplied by shipping and boarding house keepers. I have had barnmen and butchers shipped as able seamen, men who have had no sea experience whatever, with the result that during the homeward passage their presence has made things very hard and laborious for the officers and competent men. In every crew supplied at San Francisco there has always been a number of incompetent men and loafers. Such men are sent on board, and I have to receive them and sign their advance notes.

1848. Why are you bound to take the bad men; if you feel satisfied that the man is bad, you could exercise your knowledge and experience in asking the man a few questions, and judge whether he is really an able seaman?—The shipping master or the boarding master ship such men; they are signed on before the British Consul at the last, and I have to take them.

1849. Do you mean the circumstances are such that you are practically obliged to take these men or go short-handed?—Yes, the bad ones are usually pushed first, and the good ones are kept back.

1850. Do you think if a system of continuous discharges were adopted that these discharges should be simply records of service, or should they also contain records of conduct and character?—They should be records of service; but, of course, I recognise that the master is the right person to give a man a character.

1851. You know that under the existing law a seaman can decline to receive any character at all?—That is where the difficulty comes in. If a seaman takes a character and it is an unfairly bad one, he has no power of appeal. I think there might be a properly constituted court to which a man might appeal if he received an unfair character, especially after a record of seven or eight years of good character. There should be some remedy for that and an appeal.

1852. You recognise that that would require an alteration in the existing law—that it would require legislation?—I don't think it would require legislation to form a committee in the various ports for that purpose.

1853. The Act gives to the seaman at the conclusion of his engagement the option of obtaining from the captain an expression of his opinion as to what sort of a man the sailor is, upon which point the captain is the most competent judge. The captain can say, for instance, whether a man is a good cook or not, and how are a bench of justices sitting in a port at home to be better judges of that than the captain?—No doubt the master is the best judge of what the man is.

1854. If you bear in mind that the character when asked and given is simply an expression of the individual opinion of the captain, where is the necessity for an appeal?—The seaman has no remedy just now if he gets a bad character.

1855. Who is to decide between the master and the man?—That is where the committee comes in.

1856. How could a committee decide whether a man had been a good cook or not. Suppose you were the master and brought in a man and told us, as the court, that the man was a thoroughly bad cook, and the man said "I am a very good cook indeed," and supposing he produced several good discharges as cook, how are we to judge of the facts?—You would require some witnesses from the crew. If the man was not a good cook, there is not a single sailor who would come forward to say he was.

1857. Then you might have the officers supporting the captain and the men supporting the cook. How could anybody else judge in such a case?—Then I fail to see what remedy is left.

1858. Do you see, frankly, any necessity for an appeal?—I think there should be some appeal open to men in order that they may test the question of an unfairly bad discharge.

1859. You recognise that that would require legislation?—I do.

1860. For the moment we will leave out of consideration the idea of fresh legislation, and simply consider whether, under the existing law, we can devise any system to meet the views expressed in favour of continuous discharges. Supposing a discharge book is issued as the only one approved by the Board of Trade, which, therefore, every seaman would be bound to take, and suppose the backs of the different sheets in it are left blank in order that the seamen may have their characters endorsed there if they wish it, or may say "I will not have any record of character at all," or may have a record of character upon a separate sheet of paper, do you think that that would be an advantage over the present system?—The continuous discharges should have the same effect as a Naval Reserve book.

1861. Do you think it should contain not only a record of service, but also of character and ability?—It should be a complete record.

Mr. James  
Bennet.

18 July 1899.

1862. So that any master can turn to the book and see exactly what the seamen's history has been?—Yes, and it should be left with the captain; that would have the same effect on the seaman as the continuous discharge has on the Naval Reserve men.

1863. (Mr. Clark Hall.) But the Naval Reserve book does not show character and ability?—I am speaking of the principle of the thing, and the restrictions it places on the men. A man will not desert a ship so readily if it means that he loses his book, and has to work all over again for a fresh record. He will say "I cannot leave that book behind me, and so sacrifice my chances of future employment."

1864. (Mr. Howell.) Summing up your evidence, I understand you think that the continuous discharge would be a distinct advantage over the present system; that good men would like it because it would be a complete record of their experience and character, and that it would also have a steadying effect upon many of the bad men?—Yes, it would make them take more care.

1865. And you think the book would be a great advantage also to the master when engaging a crew?—Yes, it would be better for the officers and shipowners; it would produce better discipline on board a ship, for when a man has a good book of discharges at stake he will not so readily commit himself.

1866. (Mr. Clark Hall.) Have you ever known a master with a good crew who never gave better discharges than G.?—They usually give the V.G.

1867. Have you known cases where they only gave G.?—It is either as a rule V.G. or "Decline to report."

1868. If you saw a discharge with G. upon it, what value would you attach to it?—I might think it was all

right if it belonged to a young man, but if it was produced by an elderly man who had been long at sea, G. would mean that he was not up to much.

1869. You would not take it as an equivalent to V.G.?—Oh, no.

1870. (Mr. Howell.) Is there anything else you wish to say?—There are many men who have made good voyages for sixteen or eighteen months, and who were very anxious to keep their discharges, but who have at last got a bad discharge which they did not really deserve, because perhaps they said something at the last, or stuck up a little for their rights. As a rule, a man who does that is told that he is a ringleader, although he may have been one of the best men. Moreover, some men come on board who are not practical seamen at all. They may be quite decent fellows to do washing or cleaning or scrubbing, but they are not seamen, and yet may get as good a discharge as a practical seaman.

1871. You think discharges are given too lightly?—Yes, I have had a great deal of experience with foreigners unable to understand English, and as an officer, I always felt it an absolute danger and a source of great anxiety. I would recommend that no continuous discharges be granted to any foreigner who is not able to speak or understand the English language. Sometimes a master will give an indifferent seaman a better character than he deserves simply in order to get clear of him and to avoid bother with him at the Consul's office or at the shipping office.

1872. You think that the continuous discharges would be a great improvement?—Yes.

(Mr. Howell.) We are obliged to you for coming to give evidence.

Mr. Thomas  
Carey.

Mr. THOMAS CAREY, called; and Examined.

1873. (Mr. Howell.) Will you tell us what is your position?—I am an official of the Sailors' and Firemen's Union.

1874. At Cardiff?—Yes, I am secretary of the Cardiff branch of the union.

1875. How long have you held that position?—A little over four years.

1876. Before that, were you at sea?—No, I have been an official of the union since 1892, previous to which I was at sea.

1877. You have been with the union ever since?—Yes, I was at sea for ten years previously.

1878. And you appear before us to give evidence on behalf of the seamen of Cardiff, Barry, Penarth, Newport, Swansea, and Bristol?—Yes.

1879. What experience have you had in the engagement and discharge of seamen in various ports?—For over seven years I have had experience of the engagement and discharge of seamen at Blyth, Barry, and Newcastle, Shields, Penarth, Glasgow, and London. My experience has been of an outside character, that is, I hear the complaints of the men and know how they are engaged.

1880. And you have formed a general opinion as to the present system?—Yes.

1881. Then what do you think of it?—The present discharge system is simply a farce.

1882. Will you tell us your reasons for that opinion?—It may be all right as denoting the actual time of service, but the seamen contend that the present form of discharge is no guarantee whatever of a man's character either for conduct or ability.

1883. I presume you mean that in some cases it is no guarantee?—I cannot say in all, but certainly in many.

1884. You mean that in many cases a V.G. discharge is given when a man does not deserve it, and that, on the other hand, a bad discharge is sometimes given when a man does not deserve it?—Quite true.

1885. From which you conclude that the present system might be greatly improved upon?—Yes. It is an almost daily occurrence in Cardiff and other ports in the Bristol Channel for men to be engaged as able seamen, firemen, cooks, or stewards, who have had no previous experience, and whilst these men are engaged, large numbers of competent men are unable to obtain employment. There are many reasons to account for this. Very often incompetent men are engaged in consequence of disputes with regard to the amount of wages paid. Many seamen

discharged at Cardiff and other ports of the Bristol Channel have their discharges marked "decline to report." I have personally investigated many of these cases, and have found that where men have got such discharges, it has been in consequence of insisting upon what they consider to be their rights.

1886. If you like to give us any instances we should be pleased to hear you?—I may mention the case of the barque *Copsefield*. This was a case of two men engaged in this vessel for a twelvemonth; at the end of their twelve months the ship was in a foreign port called Francois. The seamen insisted on being discharged, seeing that their twelve months' agreement had expired. The captain was willing to discharge the men, provided that they paid their own passage home and all expenses to the United Kingdom. This the men declined to do. They offered the captain, however, to remain in the ship if he would give them an increase of wages. The captain verbally agreed to this, and the men resumed work. On their arrival in the United Kingdom the captain repudiated the agreement which he had made. The men subsequently sued the captain and recovered the full amount of the costs in a court of law. In retaliation the captain gave those men discharges marked "decline" for conduct, although the men had had no complaint made against them during the fifteen months they had served in the vessel. When we went to law on the matter, the captain, as I have stated, was found to be in fault, and the men got £5 compensation.

1887. The men won their case?—Yes, but because they won their case, the captain gave them a "decline to report."

1888. Was there no entry in the log against them?—None whatever, not for any misdemeanour, after they had been fifteen months on board.

1889. Do you give us that as a case where men really behaved themselves well, but got a bad discharge for some reason apart from their qualifications?—Yes. I have another case, that of the steamship *Kendall*. Thomas Burke, a fireman, was four successive voyages in the steamer *Kendall*, and at the end of each voyage he got V.G. for conduct and V.G. for ability. On the fifth voyage on the homeward passage he was taken ill with rheumatic fever, and in consequence was left in the hospital at Las Palmas. He had been three months and two days on this voyage, and no complaint was made against him, yet when he was discharged, his discharge was marked "decline" for conduct, and "decline" for ability.

1890. From the same master?—Yes, the same ship and the same master.

1891. That is a case where you think the man was hardly used?—Yes.

1892. You think it was because he became incapacitated through illness that he received this "decline," which is equivalent to a bad character?—Yes.

1893. What do you think is the opinion generally held by the seamen in your district with regard to the proposal to have continuous discharge certificates?—The seamen of the Bristol Channel ports have held many meetings with regard to the question of continuous discharge certificates for seamen. They are of opinion that whatever is done in the way of a change, should be compulsory. They contend that unless the continuous discharges are made compulsory, they will very rapidly fall into disuse, and it will be no protection to seamen whatever against incompetent men being shipped, unless masters are compelled to engage only seamen who have such discharge. If continuous discharges are made compulsory, in the opinion of the seamen of the Bristol Channel, it will prevent failures to join, which are pretty rife at the present moment, and will considerably check desertions abroad. The seamen think that the report of character should not be solely in the hands of the master. We believe that if the continuous discharge system were made compulsory it would be a benefit to the seamen themselves. That is our contention. I believe it would, in time, make a much better class of men follow the sea.

1894. You think it would be popular with the good men?—Yes.

1895. And would have a tendency to steady the weaker ones?—I think it would weed them out in time.

1896. The seamen would value a continuous form more than the present certificate of discharge?—Yes. If a man commits himself during one voyage, and gets a bad discharge, he feels now that he can destroy it and use his good ones when seeking other employment.

1897. With regard to the question of making a continuous system compulsory, do you think it should be the only form approved by the Board of Trade?—Yes, and that no man should be engaged without a certificate showing him to be qualified.

1898. Do you mean that he should not be engaged unless he is able to show his rating qualifications by his certificate?—The continuous discharge would have a similar effect.

1899. And might be used instead of a rating certificate?—Yes.

1900. But that would not alter the present system, by which a master can take a seaman without a discharge if he chooses?—It might be made compulsory.

1901. But we may mean different things by compulsion. By compulsion may be meant either that no man should be allowed to be shipped without a discharge, or that a continuous discharge shall be the only form approved by the Board of Trade, and, therefore, the only one that can be used?—Yes, the discharge should be produced before engagement.

1902. Do you hold the opinion that it should be purely and simply a record of service, and should not contain a record of character?—Quite so.

1903. You know that seamen can now refuse to have any record of character?—It is not popularly known.

1904. What would you think of a system of continuous discharge certificates, each of which contained, on the face of it, only a record of service, but upon the back of which an indication of character might be marked if the seaman chose to ask for it?—I think pretty much the same thing would apply as to the present system. If a captain intends to give a bad discharge, he marks it "decline," and if the seaman asks him to decline that would be about the same thing.

1905. At present the seaman has the option whether he will have a character at all, and if so whether he will have it on the back of his discharge certificate or on a separate sheet; would you not leave him that option?—I don't think it would improve matters to take it away from him, but if a man has not a V.G. it will be taken as a bad indication.

1906. If the man chooses with his eyes open to decline a character, you would not take that option away from him, would you?—No, but it would not improve his position.

1907. What effect do you think a continuous system would have on desertions?—I think it would have a very good effect. At present men are very apt to desert from foreign ships in British ports; they are induced by

crimps and boarding-house masters to leave with the promise of being put into English vessels, at a higher rate of wages. Very often such men find that these promises are not realised, and they desert the first opportunity. That refers to foreign men. Besides, we have a large number of Britishers who regularly, two or three times a week, will sign themselves on for vessels with no intention whatever of going on board. Other men have to be put on in their places.

1908. At the last moment?—Yes. It is done simply to get the advance note, and perhaps take advantage of some out-fitter.

1909. You think a system of continuous discharges would have a tendency to check desertion?—Yes.

1910. Is there anything else you would like to tell us?—Well, this matter of engagement and discharge of seamen is a very broad question, and one could suggest many things as a remedy for existing grievances, but I believe a continuous discharge system would make the Mercantile Marine a great deal better than it is at present. As things are now, almost anyone can be shipped on board a vessel as a sailor or fireman, and the class of men going to sea out of Cardiff at present is anything but what it ought to be.

1911. Quite apart from any question of the amendment of the law, you think the adoption of a system of continuous discharges would be of advantage to the seamen?—I think it would be a very great benefit, provided the report on character is left out. Otherwise, a good man might suffer through a bad master, or a bad man might fare too well at the hands of a good master.

1912. Then, subject to what you have said, you approve of a continuous discharge system?—Yes.

1913. (Mr. Clark Hall.) I see in your hand a certificate of discharge marked G. for conduct and ability; how would masters generally construe that?—As a bad discharge.

1914. Is it possible that the master who gave it thought G. was as good as any man was entitled to, and never gave V.G.?—That may have been so.

1915. Seeing that some masters think G. the best they should give, would it not be well that the confusion which arises from the different meanings attached to G. should be obviated?—I believe one firm gives nothing but G. That firm is well known about the Liverpool district, and that firm's discharges are looked upon as good discharges.

1916. (Mr. Howell.) Is that the Cunard Line?—Yes, I believe it is.

1917. (Captain Chalmers.) Then you favour the book system of continuous discharges?—Yes, similar to the Royal Naval Reserve book.

1918. About the same size?—Yes.

1919. How full would you make the book?—I mean how many voyages would you like the book to include?—There ought to be sufficient for ten years' voyages. Of course, when the time comes for the book to be renewed, a summary of the first book could be entered in the earlier pages of the second book.

1920. The seaman would not object to give up his book at the time of the engagement?—No, I should think that ought to be done.

1921. That would have to be done?—Yes.

1922. Having given up his book at the engagement table, should the engagement be entered on it there and then, or would you rather wait till the end of the voyage?—The engagement could be entered in the book at the same time as the seaman signed the articles.

1923. And if the man failed to join or deserted, what should then be done?—The book should be returned then to the Board of Trade.

1924. When the seamen have signed the articles, should the books be handed to the master?—At least until the vessel sailed; but in the case of any man not turning up or turning up incapable, his book should be handed over to the Board of Trade officer at the port, and the man would have to apply to that officer for his book. I think that would have a tendency to stop many of the men getting drunk.

1925. Supposing the man joined, his book would remain in the possession of the master for the whole of the voyage?—Yes.

1926. What would you propose to do in the event of desertion at a foreign port?—The master would be responsible to the Board of Trade for the return of the book.

Mr. Thomas  
Carey.

18 July 1899.

*Mr. Thomas  
Carey.*

18 July 1899.

1927. Until he arrived home?—Yes. The master would give it up to the Board of Trade officer when the vessel was being released.

1928. But how is the man who has deserted abroad to get home from the port where he deserted?—If he commits himself he must do the best he can. If he has offended he must suffer.

1929. Could you not suggest some means of dealing with such a case?—If a man is left in a foreign port as a British subject, the British Consul there is responsible, and when he arrived home he would have to apply to the Board of Trade for his book.

1930. Would you not rather suggest that, as the Consul is responsible for the man when he is at the port, the book should be handed to the Consul?—There may be considerations in favour of that, but I would rather it was returned to the Board of Trade.

1931. In the case of a port where some new industry was springing up, such as gold-digging, and you had a lot of desertions, you would have the State charged with the duty and cost of sending home a large number of distressed British seamen, otherwise deserters, who could not get ships without books?—I think there are few places where there are such strong inducements for men to desert, but whether there are inducements or not, it is wrong for a man to desert his vessel, and if he does that he ought to suffer for it.

1932. Would you not rather favour a system that if a man deserted, and the book was left with the Consul, and the man turned up three weeks or a month afterwards, the Consul might say to him: "Here is your book, but it must bear a record of your desertion," or, "I will hand it to you in order that you may sign on to another ship"?—That would be a very good system if it could be properly carried out, but I am afraid it is open to abuse.

1933. Why should it be open to abuse? Why should the Consul be any more likely to abuse his power than the superintendent of the Mercantile Marine office?—The Consul is in a foreign port, and not surrounded by others who may have an interest on the seaman's behalf. I don't think that as a rule the Consuls care to be troubled more than they can help. Most of these matters are relegated to the Vice-Consul. In American ports, where most desertions take place, and where men are induced

to leave vessels through promise of higher wages, if they can get their discharges at once there would be no restriction to employing them in other vessels, whereas if the books were returned to the United Kingdom they would not have their discharges, and I think it would be better in the long run if the books were returned to the United Kingdom.

1934. Don't you realise that your suggested system would impose upon the men the punishment of not being able to earn their livelihood for a considerable time?—I think a man who has done wrong ought to be punished or to suffer some penalty. Desertions are far too frequent, and good men have often a difficulty in getting employment owing to the numbers who desert. If the continuous system were introduced, a better class of men would go to sea, and the worst might find occupation somewhere else.

1935. Do you not see that besides punishing the man in such a case, you are punishing the English taxpayer, who is compelled to send the man home?—If the continuous system were carried out there would be fewer desertions.

1936. You think the scheme would work out its own salvation?—I do.

1937. You hold that a continuous form should simply bear on the face of the leaves of the book a record of service?—Yes.

1938. The back of the page could then be left blank so that the seaman could exercise his option, and say to the superintendent, if he liked, "I want my character stamped on the back"?—Yes, I would favour that.

1939. Or the man could say, "I want that left blank." Would you leave him that option?—I think that would be best, but I would not leave it to the captain.

1940. In case of a man really losing a book, and having to apply to the Registrar-General for a duplicate, he would have to pay a fee representing the value of the new book?—Yes.

1941. You think there would be no hardship in that?—No.

(*Mr. Howell.*) We are obliged to you for your evidence.

*Mr. William  
Brown.*

*Mr. WILLIAM BROWN, North Shields, called; and Examined.*

1942. (*Mr. Howell.*) Will you tell us what is your position?—I am secretary of the North Shields branch of the National Sailors and Firemen's Union, and I am a member of the North Shields Local Marine Board.

1943. How long have you been there?—I have been there ten years.

1944. And you have left the sea for that period?—Yes, I had sixteen years' previous experience at sea, in all kinds of vessels, and for some considerable time I was boatswain for the Tyne Shipping Company. During the ten years that I have been local secretary of the Seamen's Union I have been present when thousands of seamen have been discharged.

1945. What opinion have you formed with regard to the proposal to have continuous discharge certificates in place of the present system?—My opinion is that it would be beneficial to both owners and men, provided they were compulsory. We have a class of men who make a regular practice of shipping possibly two or three times before ever they mean to join a vessel.

1946. When you speak of the continuous discharge form being compulsory, I suppose you mean that it should be the only form approved by the Board, and that everyone should be compelled to take it who had any discharge certificate at all?—Yes.

1947. Your opinion is that discharges now are given too lightly?—Yes.

1948. "V. G." being often given to bad or doubtful men?—Yes.

1949. And a bad discharge sometimes given for insufficient reasons to good men?—That is so.

1950. I think you want to tell us something about what are called field days?—One of the principal causes of trouble on board ship is what is called "field days." On a number of vessels that have signed off at North Shields during my term of office there has been a great disturbance

in consequence of men being compelled to work field days on the passage home, and quite a large number of seamen have been tried before the magistrates at North Shields Police-courts and condemned to terms of imprisonment because they refused to do these field days, without having any allowance in time or remuneration. That caused much dissension among the seamen.

1951. You refer to extra work without extra pay?—Exactly so, without either extra pay or allowance of time; the result may be in the case of a deck hand that he may have the usual watch duty, and in the afternoon, when he should rest, he is put to extra work, making up the whole to an excessive total.

1952. Your position is that the men are overworked, and that the conditions are not so safe and satisfactory as they should be?—That is so.

1953. Have you had experience of cases of that sort coming before the Courts?—Yes, several men have been sent to prison for refusing to work field days, and complaining of being over-worked on account of field days. Some vessels are much heavier to work than others. In the lighter vessels, where the work is not so laborious, there is not the same amount of complaint. In the stoking department the work is, of course, much more trying, with the result that, after four hours stoking, men are practically exhausted, and should not be called upon to do field-day work.

1954. Your contention is that, in these circumstances, they are over-worked?—Yes.

1955. What has been the result of those cases?—In some instances they have been able to prove that the work was really too much for them, and in other instances they have had to go to prison.

1956. Although these may be, in your opinion, very good men, they may get a bad discharge through these field days?—Undoubtedly. I could cite cases.

1957. You think that, on the whole, the present system of separate sheet discharges has not worked well?—Certainly not.

1958. And that a system of continuous discharges would work better?—Yes.

1959. And would be in the interests of both master and men?—Yes, providing the master has not the sole prerogative. Some time ago, when I left the Tyne Shipping Company, I applied for a situation then vacant under the Local Marine Board at South Shields. I thought that, as a seaman, I should have an opportunity of sending in my application and references. When I left the Tyne Shipping Company I neglected to ask the master for a reference, and when I left the London Blue Anchor Liner Marumbigee, I neglected to get a reference, with the result that my application was thrown aside on the ground that three references from my previous employers were required.

1960. I suppose your point is that the Local Marine Board were not prepared to accept the discharges alone as a record of character?—Yes.

1961. And you were asked to supplement them with special certificates and references from your employers?—Yes, I did so. When my vessel came back I asked Captain Pilkington, of the s.s. Marumbigee, and got a first-class reference. I sent a copy of it to the Local Marine Board, in order to show that at least I could get a first-class character from my late employer, but the Local Marine Board were not, apparently, prepared to accept the discharges alone.

1962. Why do you think that the continuous discharge form would be better than the present system?—In every large shipping port, especially taking the three on the Tyne, which are in close proximity, it is quite possible for a man to go back and forward from North to South Shields or to ship from Newcastle, and a man may sign on for the purpose of getting the advance note without any intention of really joining the vessel. As a member of the Local Marine Board I have had many complaints of that sort. If I may be allowed to make a suggestion, it is that the superintendent of the Local Marine Office should retain the discharges of the men who sign. If a man, through ill-health or an accident, is unable to join his vessel he could bring a report to the superintendent at the port where he signed and he would be able to recover his discharge, but in the case of men who fraudulently signed on without any intention of joining, I think I should make them go for some stipulated time before they recovered their discharges.

1963. Do you think that the men would value a system of continuous discharges?—I am positive that they would; the respectable and steady men would value it, and, besides that, I contend it might be the means of steadying other men.

1964. Is there anything else you would like to tell us?—I don't think there is anything material I would like to add, except a question, perhaps, which may be apart from the subject undertaken by this Committee.

1965. What is it?—It is that I hear complaints very bitterly made, and I have written to the Board of Trade about it, in respect of seamen being left in a particular port and having to wait too long before being paid off, which prevents them getting away as soon as they should. Some arrangement might be made by which the men should, under certain circumstances, get their money at the Local Marine Office, and then they would be able to proceed home and escape many of the dangers into which they fall through getting into the hands of people from whom they sometimes have to obtain money at an exorbitant rate of interest.

1966. You think it a bad thing to keep men hanging about in a strange port?—Yes.

1967. (Mr. Clark Hall.) Are you aware of cases in which masters habitually give G. instead of V.G. in their discharges?—No.

1968. But you have heard that there are such cases?—Yes.

1969. What effect would that kind of certificate have upon a seaman's prospects of obtaining further employment?—It is fairly well understood in the North, where it is habitual with some liners, not to give V.G. So far as the general tramp trade is concerned, both in the North and South, V.G. is generally given, and it often happens that, rather than go to the trouble of having

to make a report or cause a scene, the master will give a man V.G., even when he has determined not to take that seaman back with him again.

1970. That is not my point. When a master is being interviewed by a sailor with a view to engagement, if he sees the seaman produce only a G. discharge, he has grave doubts whether that man's character is V.G.?—That is so. He would probably not accept him. I have sixteen years of discharges, but once I got a decline. I had gone twice in the same vessel. We had a bad passage, and ran short of provisions. The master and I had some words, and in spite of being in the vessel before with a first-class discharge, I got a "decline." We think that where a man has been seventeen voyages and got V.G. for conduct and ability, it is not fair that he should be let down the eighteenth voyage by the master alone, without appeal, simply because the man may have come in contact with the skipper at a moment of temper, perhaps on some frivolous point. The master should not have the sole prerogative.

1971. You have not dealt exactly with my point. I was speaking of the value of G. as compared with V.G., or "decline." Does G. mean very good?—No, G. means practically "go."

1972. (Captain Chalmers.) You spoke as if a man who got V.G. seventeen times, might find all that extinguished by the fact that on the eighteenth voyage he got a bad character, but is that reasonable?—It may be unreasonable; but the engaging officer always asks for one's last discharge. If the last one was a bad one, and has been destroyed, the officer will ask what the man was doing in the interval since the previous discharge. The man may say, as I have to admit that I myself have said under such circumstances, "I was working ashore during the interval." That was an absolute lie, but I simply told it because I knew it would be no use to present a "decline," and the earlier date of the preceding certificate might excite suspicion.

1973. You think that officers, when they take men's discharge certificates, examine them very closely?—I am positive they do. I see it every day. At Newquay, North Shields, on any particular day you may see from two to three hundred men looking for employment, particularly if there are many ships in port. When a chief engineer or first officer comes up, the men crowd round him, each one offering his last discharge. If the last discharge is a bad one, it is not there but is left out. This may leave a gap of a month or six weeks, and the officer will ask what were you doing during that time. The seaman may reply, "I was working ashore," although possibly he may have been to Montreal and back with a bad discharge. If a seaman deserves a bad discharge he ought to get it, but the master ought to state some reason why he has given it. Often the master will give a man a better discharge than he deserves in order to avoid the bother of stating why, but he must at the same time resolve himself never to have anything more to do with the man; so someone else has to employ a man who may be not only incompetent as a seaman or fireman, but also have a bad character.

1974. If we have been told by any witness that, in the engagement of crews, men crowd round the officer so much that he has not the opportunity of examining their discharges, would that be true?—No.

1975. You think that in most cases the officer closely scans the papers?—That is so. In many instances on the Tyne the men are engaged before they come to the office at all. So that when the officer comes he simply reads the list of names and the selected men pass in to the office to sign.

1976. Have you ever seen a man with a discharge on which there was no character at all?—Never.

1977. In all cases it has been marked either G., V.G., or Decline?—Yes, that is so.

1978. Have you known that men, on being paid off, if they suspected they were going to get a bad character, could refuse to have that part of their discharge filled in?—Perfectly.

1979. Do the seamen know that?—I don't think they really understand that they can refuse to have a character from the master, and if the space was left blank the seaman might possibly fill it up himself in ignorance of the fact that in doing so he might bring himself under the law.

1980. If a continuous form of discharge were adopted, those responsible for it must be careful to guard against that?—I hope that at least the prerogative of the master will not be left—that his will not be the sole power.

Mr. William Brown.

18 July 1899.

*Mr. William Brown.* 181. You favour the continuous discharges being in book form?—Yes.

18 July 1899. 182. Suppose you have on the face of the page the name, age, and description of the seaman, his rating, the name of the ship, the date of engagement and the date of discharge?—Yes.

183. Then on the back of the leaf will be a blank space, and if the seaman likes to say to the superintendent, "I want a copy of my character as it appears on the official log stamped upon that space," he has the option to demand that under the Act at present. Would you still retain that option?—I hope not.

184. Why do you want that altered?—I should still allow the master to give the man a character for conduct and ability.

185. He is bound to do that in the log?—He is the man who can do it, but if the seaman has been a voyage in the ship with a first-class character, and then, through some little dispute or from spite, a worse character is offered him for a second voyage, the seaman ought to have the power to appeal to some tribunal to compel the master to give him again a first-class character or to state the reason why.

186. Don't you recognise that the character which appears in the official log is the individual opinion of the master, and that no tribunal or authority can alter his individual opinion. Has a captain not a right to form his own opinion as to the character and the services rendered by the men who engage under him?—I should think so.

187. Then how are you going to prove that the entry in the log is not his individual opinion?—I have tried to point out that by the case of a seaman who makes two voyages in a ship. Suppose that for the first voyage he gets a V.G. for both conduct and ability; but in the second voyage, if the man says "No" when called upon to do something he ought not to be called upon to do or is unable to do, down goes an entry in the official log for insubordination or refusal of duty. The man should have an equal right to prove that the orders were unreasonable or that he had not refused, and that the master should not have written "Decline" or "Decline to report," which latter is somehow considered rather more serious.

188. Then you don't think we can leave the space at the back of the page blank? At present as the law stands a seaman can say to the superintendent, "I don't want any report of my character upon my discharge or otherwise," or he can say, "I want the report on my character stamped upon the back of the page"; or he can say, "I want the report on my character copied upon a separate sheet of paper." Don't you think the seaman should be left that option, or would you wish to alter the law in that respect?—I think that to make a continuous discharge of any value at all to the seaman, an alteration is necessary,

and that a seaman should have the power of appeal in the event of a previous character being unfairly and unfavourably altered by the same captain.

189. You think the seaman's option of refusing a character is not sufficient?—I don't think so, inasmuch as the seamen generally are not acquainted with the fact that they can refuse.

190. Would you favour the men being asked by the master at the time of engagement to give up their books to him?—I would.

191. And the books to remain with whom?—With the superintendent until the ship sails, and then either sent on board along with the articles, or retained by the superintendent as might be arranged, the latter by preference, because a seaman might meet with an accident or fall sick, and fail to join. Such a man should be able without undue delay to recover his book; but we do want to stop the system now rampant all over the country, in every large seaport, of allowing men continually to sign and then deliberately fail to join over and over again, for the purpose of bilking somebody out of an advance note.

192. If a man failed to join, and the master had to ship a substitute, he would send back the absent man's book to the superintendent?—Yes, that is so; but in the event of a seaman persistently and repeatedly failing to join, I contend that his book ought to be retained for a time.

193. Would it not be sufficient for the book to show that he had deserted?—Yes, the same thing would apply.

194. That might punish him enough?—Quite so.

195. In the event of losing his book, what should the seaman have to do to get a duplicate?—The seaman should have to apply to this department, as he does at present for copies of his discharges; and he should be charged, and charged stiffly, so as to make him more careful not to lose it. At present we have to pay for copies of our discharges, even if it is the mate who loses them, or through carelessness mislays them.

196. If the department charged the value of the new book and a fee for the entries, would you not think that sufficient?—Yes, I would.

197. You would not make the charge stiffer than that?—Not unless a careless seaman persistently made a practice of losing his book, or backing out after having signed on. The number of desertions abroad and of failures to join is very large. The object I have in view is to assist the owners and bona-fide respectable seamen. The owners would benefit by the men coming forward at the proper time fit for their work.

198. (*Mr. Howell.*) You think the continuous form would improve matters all round?—That is my opinion.

We are obliged to you for your evidence.

*Captain T.D. Bulkeley.*

Captain T. D. BULKELEY, called; and Examined.

199. (*Mr. Howell.*) You have come, I think, to give us evidence on the subject of continuous discharges. Will you tell us first what your experience has been?—My experience has been, in a sense, rather limited, as I have been all my life in the service of the Royal Mail S.S. Company.

200. Are you still with them?—No, I resigned last year.

201. You left the sea last year?—Yes.

202. What is your opinion of the proposed adoption of continuous discharges in place of the present system?—I think continuous discharges would be a very good thing, and would prevent a great many desertions and failures to join, specially if the books were passed over to the master as soon as the seamen had signed.

203. You think that a form of continuous discharge should be the only form approved by the Board of Trade, and that, therefore, every man should take it?—I think it should not be optional, or it would lose its value.

204. Do you think it should be a record of service pure and simple, or also a record of character and ability?—Both.

205. That it should be a complete history of the man from his first voyage, a record of his service, with the opinion of each master as to his character and ability?—Yes, with a certain proviso that it should not be left entirely to the master to give the seaman a character.

206. Not entirely to the master?—If the master is

going to give a bad character it should be verified from entries in the log-book and endorsed by the marine superintendent.

207. The character should only be based on the entries in the log?—Yes.

208. You recognise, I suppose, that the character given at the termination of the voyage is the expression of the individual opinion of the master. Take the case of a cook, for instance, as a good many complaints at sea arise from bad cooking. Don't you think the master is the person most competent to give a character?—Certainly.

209. It has been suggested that if a seaman was satisfied with a character given him by the master, he should have a right of appeal to the Board of Trade, or some other authority; but we see great difficulty in that, as the character is the captain's opinion. He may say this man is a bad cook, and, when the man is brought here, the charge may be denied, but how are we to discriminate between the two?—I think the master is the proper person to give the certificate; at the same time I think it should be verified from the log by the official before whom the seaman is discharged.

210. You mean that the captain should be prevented from giving a bad character through mere caprice?—Yes, quite so.

211. No doubt you hold the opinion that the "V.G." discharge is often given too lightly?—Yes.

212. That a bad man or an indifferent man often

gets too good a discharge, and that, on the other hand, a good man sometimes gets a bad discharge through caprice?—Yes, I think that does happen.

2013. And you would wish to see that changed?—Yes. That is why I think the character should be verified by reference on the part of the Board of Trade to the entries in the official log.

2014. You know that at present the seaman need not take a character at all unless he likes?—No; but he should be forced to take a character.

2015. You would advocate that, which would involve an alteration in the law?—Yes.

2016. Under the existing law a seaman can refuse to have a character, if he chooses, or can have it written on the back of his discharge, or upon a separate slip of paper. Would you rob him of that option?—If a seaman refused a character, it would be tantamount to having a bad one.

2017. Exactly, and, having regard to that fact, would you still rob the seaman of his present option?—Yes, I think so.

2018. You would force him to take a character?—Yes, or "decline to report."

2019. On his continuous discharge?—Yes.

2020. I see that your object is to have on the continuous discharge a record of the seaman's services, character, ability, and everything. So that a master may be able to take up the book and see from it not only the experience of an applicant, but also the manner in which the man has performed his duties, according to the opinion of his former master, as certified by entries in the official log?—Yes.

2021. Is there anything else you would like to add?—I think the continuous discharge book might contain records extending over a period of five years.

2022. Is there anything else you would like to lay before us; if so please do so quite frankly?—I think the continuous discharge system would be a great advantage to men who wish to have a good record, but it would not at all please the bad men.

2023. A continuous discharge system would be popular with good men?—Yes, but utterly condemned by the worst class.

2024. Perhaps it might have the effect of turning some of the inferior class into good men?—Yes, probably.

2025. They would take more care?—Yes, a continuous system would prevent the robbery and exchange of discharges, which we now find very misleading.

2026. You mean the use of bogus certificates?—A certificate obtained from someone else and altogether untrue as a description of the man who presents it.

2027. Would a continuous system check desertion?—Yes, I think so. I am assuming that a description of the seaman would appear in the book.

2028. You think it should include that?—Certainly.

2029. Then you think that for all the reasons you have mentioned the continuous discharge system would be a great improvement on the present system?—Yes, there might be a little friction at first; but after a time it would work well.

2030. If intelligently worked out it would be a distinct advantage?—Yes.

2031. (*Mr. Clark Hall.*) When you are discharging a crew, do you give them a V.G. or a G.?—If a man has been logged, and we don't wish to give him the best character, we give him G. "Decline to report" is considered a bad character.

2032. I suppose you know that some "lines" never give better than a G.?—That is so; but it is not our practice. We try to qualify and discriminate as fairly as possible.

2033. If your chief officer in collecting a crew saw a man with a G., would he not be apt to look upon him as rather an inferior character?—Yes.

2034. (*Captain Chalmers.*) Why do you hold that a certificate of discharge, which is simply a record of service, or intended to be such, should bear on it the character of the seaman? I am referring to the fact that the Merchant Shipping Act places the obligation upon the master in paying off his men to hand to each man a certificate of discharge which is necessarily simply a record of service. Why do you want to add the character to it?—Indications of character were intro-

duced by the Board of Trade, which left spaces or discs for the purpose, and it was naturally supposed that the master had to fill them up.

2035. I suppose you recognise that the master has no right, unless with the seaman's consent, to put anything upon the discharge with regard to character?—I believe that is so by Act of Parliament; but the generality of seamen don't know that.

2036. The position really is that the seaman is entitled to ask the superintendent, who is alone empowered to endorse on the certificate anything as to character?—I was not aware of that.

2037. You were not aware that the master's duty was done when he filled up the record of engagement and discharge?—We have never had any disputes on the subject, and have not gone into any of these legal points.

2038. I suppose you think it was the presence of these discs that made it grow into the minds of masters and seamen alike that these spaces had to be filled in, and that there was no option?—Yes; that the masters had to give a G. or a V.G., or a "decline to report."

2039. Now that you understand the condition of the law, do you or do you not think that the option should still be left with the seaman, and that the back of the discharge should be left blank so that the seaman, if he wishes, could ask the superintendent to stamp upon that space the report as to his ability and conduct?—If a continuous discharge is going to be put in force, I think it ought to be filled up by the master and verified by the superintendent.

2040. Do you think it is worth changing the law to attain that?—I think so.

2041. Although it would involve all the labour of an alteration in the Merchant Shipping Act, and although if the man presented a continuous discharge book with the back of the sheet blank as to character, you could question him as to the reason, and judge whether or not he was a doubtful person. If there was no indication of character on the certificate, would you not consider the man a doubtful character?—Yes.

2042. Would you not be protected in that way?—Yes; but it would be better to have the matter settled at once and definitely.

2043. Do you think it is right that the power of the State should step in and compel a man to receive a report of his character—a form of compulsion never heard of?—I think in the case of seaman, the character ought to be placed on his discharge. It is absolutely necessary for the safety of the crew and passengers, as well as of the ship itself, that you should have the best material you can get, especially considering the trouble and annoyance that many men cause.

2044. Suppose you carry the requirement into another grade, and were to say that officers and masters who get engagements through their certificates must be compelled to accept, upon their certificates when they left, a report as to their character?—It is the same principle, and I don't think the officers would object to it. I have got some discharges and they are all "decline to report," which is tantamount to bad and therefore perfectly useless, but that is the practice of our line with the officers. When I went up to pass the examination for master I had to get a certificate from the company.

2045. (*Mr. Howell.*) And then you no doubt got a first-class one?—Well, they stated that I had served with diligence and sobriety.

2046. It is simply the practice of the line, is it, to put "Decline to report" on officers' discharges?—Yes.

2047. (*Captain Chalmers.*) I think you said that if a master wanted to give a bad character or a "Decline to report," there should be a power given to the superintendent or someone else to forbid him to do that unless there was a specific entry in the log-book as to some act of insubordination or some other offence?—That is my opinion.

2048. Have you not had experience at sea of men who have been idle and disobedient, almost to the point of insubordination, but have just stopped short of that, and who know how to prevent getting an entry against them? How are you going to treat that class of men, which is a frequent class in large ships?—In a case where there was subsequent good conduct, and where there was the risk of undue injury to a man the entry could be cancelled.

*Captain T.D. Bulkeley.*

18 July 1899.

*Captain F. D.  
Bulkeley.*

18 July 1899.

2048. I am supposing you have no entry; that the man is idle and disobedient, but stops short of insubordination; that he always gives slow relief at the wheel and the look-out, just grubbing along, and that at the end of the voyage there is no entry against him. Is the master, because there is no entry, to give such a man a "V. G." certificate?—Practically, the master might arrange to have that man logged; and an entry made in the official log that although the man's ability was V.G. his general conduct was objectionable to the officers, and deserving only of a G.

2050. Do you mean that he might bring an irritant into force?—Yes, if the man was such a trouble, but that is not right or wise. The only other thing one can do in such a case is to give the man a G. discharge and not engage him again.

2051. Pass him on to somebody else?—Yes.

2052. Is that wise or fair?—It is not right.

2053. Is it not better to leave the law as it is and let the report on character be quite optional?—That seems a fairly good alternative.

2054. Do you think that masters would co-operate with the Board of Trade in bringing a continuous system into force?—I think so.

2055. At present, there is nothing in the law when a master is engaging a crew to compel the men to produce their last discharges, or to produce a continuous book form; do you recognise that fact?—Yes, but the master need not engage a man unless he produces it; and the master in engaging a man looks as much to his record of ability as to his record of conduct.

2056. Could we depend on the masters refusing to ship one single man who does not hand in his continuous book?—Except under the most exceptional circumstances, where a master might be obliged, at the last moment, to take substitutes in order to work the ship.

2057. I was speaking of men in the engagement office; can we depend upon the masters insisting that they should produce their continuous discharges?—Yes.

2058. So that practically the system would become compulsory, through the masters demanding that the book should be produced or otherwise refusing to engage the man?—Yes.

2059. Upon the book being produced, would you advocate that the superintendent should, there and then, enter in the book the date of engagement?—I think it would be well if he did so.

2060. And that he should after that hand all the books into the custody of the master?—Yes.

2061. In the case of tramp steamers, where there are more desertions and failures to join, the captain sends back, when he is on the point of sailing, a form called Eng. 2, which is a return of the changes in his crew; do you think the captain would also undertake to send back, at the same time, the books of his men who had failed to join?—Yes, I think that ought to be done. It would be a very bad record if the engagement were entered on the continuous discharge and there was no entry of the discharge.

2062. Would you advocate when the superintendent got that into his possession, he should put across it, the words either "failed to join," or "deserted"?—Yes, unless the man could show a very good reason why he had failed to join, such as sickness or accident.

2063. Even under those circumstances, would you not

still be compelled to put a similar entry upon his discharge certificate?—Yes, but I think "failed to join" would be sufficient.

2064. In the case of desertion abroad, what do you think the master should do with the books?—He might hand it to the consul.

2065. You think that would be best?—Yes, or to the shipping master, where there is a shipping master.

2066. In places like Gibraltar and Malta?—Yes; in some of the British Colonies they have shipping masters.

2067. In cases of shipping men abroad from a consulate, would you also demand the book to be produced?—Yes.

2068. Would you not ship a man unless he could produce his book?—No, unless it was absolutely necessary at once to fill up the complement of the crew, and under these circumstances, so long as an applicant says he is a seaman, you must take his word for it.

2069. If you were engaging a man who consistently declined to have any report on his character endorsed upon his certificate, what opinion would you form of him?—I should think there was something wrong with the man's head, and I should decline to ship him.

2070. You would think him not a good character?—I should think it rather an indication of bad character.

2071. If we are told that the introduction of a continuous discharge system might lead a large percentage of the seamen in their desire to make it a mere record of service, to decline to have their character stamped on it at all, what would you say then?—I don't think I could have any remedy.

2072. Would it not be some remedy if your engaging officer were to examine the discharge closely to see whether the record of service was fairly regular and unbroken, and did not include any desertions?—Yes, that would be some indication.

2073. Don't you think it would be sufficient indication, although it might involve trouble, to scan the entries closely?—Yes, but I don't think such a case would occur. If it did occur we should have to rely upon the man's record of service.

2074. But you think that reliance on the man's record of service alone would not be a safe guide?—I think it would not be entirely safe, and I think that any proper-minded seaman would prefer to have a record of his character and ability.

2075. You think the masters will do all they can to assist a continuous scheme?—I think so, and also that those in authority at the Seamen's and Firemen's Office would do so.

2076. You don't think it should be made compulsory for the master, at the last moment, when engaging substitutes, to absolutely require the production of the book?—No, because a master is severely handicapped at the last moment, because he must get his ship to sea and take the best material he can get. I have had to pick up men at Gravesend who came alongside with their bag and baggage, along with perhaps one solitary discharge.

2077. Which perhaps they may have bought?—Yes, but the ship must not be detained, and it would be only a small percentage of the crew who would be engaged under such circumstances.

(Mr. Howell.) We are obliged to you for your evidence.

## NINTH DAY.

Thursday, 23rd November, 1899.

## PRESENT :

The Right Hon. the Earl of DUDLEY (*Chairman*).

Captain A. J. G. CHALMERS.

Mr. J. CLARK HALL.

Mr. W. J. HOWELL.

Mr. C. HIPWOOD, *Secretary*.

Mr. G. A. LAWS, called ; and Examined.

Mr.  
G. A. LAWS.  
23 Nov. 1899.

2078. (*Chairman*.) You are, I believe, the General Manager of the Shipping Federation?—I am.

2079. Does the Shipping Federation represent a large proportion of British sea-going vessels?—Yes, about nine-tenths of our sea-going vessels.

2080. I understand that the Chamber of Shipping, as well as the Shipping Federation, have asked you to come and give evidence on their behalf?—That is so.

2081. You know there is a proposal that the Board of Trade should change the present form of discharge, and should adopt some form of continuous discharge instead of the present separate discharges ; and this Committee has been appointed to inquire into that proposal, and to report as to whether or not it is feasible?—Yes. I understood that to be the origin and object of the Committee.

2082. I understand that your Federation has for some years had a continuous form of discharge, resembling to some extent the form of discharge which it has been recommended that the Board of Trade should adopt ; but is it not a fact that the continuous record of service which your form contains is really incidental to the real reason why it was adopted. What I mean is this :—I take it that the primary reason for your adopting a continuous discharge is that you may have the men in your service continually employed—that you may retain the services of the same men, and also with a view to the adoption of some kind of insurance or benefit arrangement?—To some extent that is so. We copy the Naval Reserve book as a form of continuous record, and then we made it dependent upon a benefit scheme.

2083. Yes, but am I right in assuming that it is in order to work your benefit scheme, and that you may continually employ the same men, that you have adopted this system of continuous discharges?—Entirely.

2084. Will you please explain to us what is the main point of your scheme?—Yes, it may be described as follows :—

- (a.) The general principle which underlies the Federation Registry and Benefit System may be described as the "*encouragement of steady seamen*," by the offer of constant employment and material benefits payable for loss or accident during faithful service.
- (b.) The system may be considered under two heads, viz. : (1) Registry, with a ticket ; and (2) Benefit Registry, with a continuous record of service.
- (c.) The registry tickets are of two classes, viz. ; paper and parchment. Both of these admit to employment in federation vessels.
- (d.) The paper ticket is issued to seamen who do not desire full registry leading to benefits. The tickets cost nothing, and are merely passes to employment after sighting papers, but without giving any claim for preference.
- (e.) The parchment ticket represents full registry after stamping discharges. It costs the seaman 1s. for entering, and 6d. every six months for re-dating. It admits to thirty-five S.F. waiting and reading rooms, and after six months' faithful service it entitles the holder to claim a benefit certificate with continuous record of service.

(f.) The benefit book certificate costs the seaman nothing, but it must be re-dated annually, to preserve its insurance quality. The service of the holder must also be recorded each voyage (with conduct if required). Then, in case of death or personal injury, certain allowances (see Rules) are payable at once to relatives, or to the seamen themselves.

(g.) The benefit books may be forfeited or suspended for certain statutory offences, but not for strike or dispute about wages.

(h.) No entry of any offence is permitted in these books unless from the official log book, and confirmed by the M.M. Supt. when the seaman is discharged, but entries of good character are frequent.

2085. You won't employ any seaman unless he has got one or the other of the two forms of certificate you have described?—That is so.

2086. Can a man at once obtain a parchment ticket or has he to go through a kind of probationary interval with the paper ticket?—There is a probationary six months, unless he has already served six months at the time he applies—or unless he is a Naval Reserve man or a Royal Navy man.

2087. Otherwise a man would have to hold a paper certificate for six months before becoming entitled to the other?—Yes, if he could not produce some documentary proof that he had already served six months in federation vessels.

2088. Is the benefit book which you have produced given with the parchment ticket or does it require some separate qualification?—The parchment ticket entitles its holder to demand the benefit book, but some of the seamen don't ask for it. Some of them say, "We don't like to take a benefit certificate, because we don't want to be drowned this voyage." Such remarks are made by a limited number. Seamen now take the benefit book more freely.

2089. Does the parchment ticket alone carry any benefit with it?—Not by itself.

2090. But it entitles a man to ask for the book?—Yes, it is the book that carries the benefit, and he has to record every voyage in the book with his character for ability at the end.

2091. Does his benefit at all depend upon the entries in the book?—No, it depends upon the re-dating of the book. It must be re-dated once a year. He must come to the office at the port where he arrives and get his voyages entered. That is called re-dating.

2092. But if a seaman was careless about these entries and did not enter one or two of his voyages in his book, would that disqualify him from the benefit?—No. If he did not re-date when he could re-date that would disqualify him, but the voyage would be written in for him when he presented the book for re-dating. Comparatively few of the sailors write these entries in themselves ; they generally ask one of our officers to fill up what is necessary from their discharges.

2093. Do you oblige your agents to enter in these books any offence which has been logged?—No, we don't allow them to enter any offence unless the Mercantile Marine

Mr.  
G. A. Laws.  
—  
23 Nov. 1899

officer agrees that it should be so entered, and, as they have no orders to act in that way, it is not done. There are no offences entered except in gross cases where the book is forfeited, or suspended.

2094. If a man is logged for an offence, it does not necessarily appear in your book?—No, not at all.

2095. Is it only in very rare cases that the book is forfeited?—Yes, comparatively rare cases, and yet we have about 1,200 forfeited books now, in eight years, which is rather more than we anticipated in the first instance. Originally, when only the good, steady men took the books, their forfeiture was very rare, but gradually we have got beyond the best men, and we have now some men who occasionally do forfeit their books. We have about 70,000 men altogether.

2096. When a man forfeits his book once, is it forfeited for good and all?—No, not necessarily.

2097. May he recover it?—In the first instance we suspend the book; during the period of suspension he goes back to the use of his paper ticket. We don't stop him working at all. We tell him that if he can bring back a good character his book may be renewed. There are some cases where books may be forfeited for good, and finally cases such as I hope to bring before you in order to show the class of characters we are attempting to exclude and do exclude as far as possible.

2098. In the case of an offender you suspend his book and drive him back on his paper ticket?—Yes, which simply means that Federation ship masters may employ the man at their own risk, knowing that his book has been forfeited for either desertion or mutiny, or for cashing an advance note without afterwards joining the ship.

2099. In fact, you degrade the offender?—Practically it does amount to that.

2100. You put him in an inferior rank, but supposing he behaves well afterwards, and you reinstate him and give him back his parchment ticket, do you allow him at the same time to have his book entered up from the date where it was left, or do you begin him with a new book?—Very seldom with a new book. Generally we enter simply the voyage that has intervened, with the character that is given. In some cases there would be an entry that the book had been suspended between certain dates.

2101. Would that reduce the sum the man would be entitled to out of your benefit scheme?—No, not in the least. If he gets back the book he is fully covered.

2102. Is he entitled to as great benefit as if he had never done wrong?—Exactly. The only difference is this, that if there are more seamen offering with books than are actually needed, the captain has the option of choosing amongst them and giving a preference to the men with clean books. I need hardly say that I am afraid the shipmasters often do not examine the books. He sees that the man has a book and he takes the man if he wants him, but without doing much more unless there were a great many more men offering than are needed, which would give him a very free hand in selection.

2103. Although the question I now propose to put to you has nothing to do with this particular point that we have been dealing with, I should like here to ask if you have ever found that shipmasters have friends amongst crews whom they always take on, no matter what their offences or record may be?—We find that to be very much the case amongst the engineers, but not amongst the seamen. There is very little of it amongst the deck hands. A shipmaster may have a relative, such as a boy going to sea as an apprentice or as an ordinary seaman, but in the engine room an engineer frequently takes friends who have never been to sea at all, and puts them on as trimmers or something of that sort.

2104. What is the cost for clerical labour both at the ports and the head office?—The cost of the registry and benefit systems for clerical labour only is £550 at the head office and £3,500 for the thirty-five district offices. The total cost for staff, offices, waiting rooms, mechanical appliances, books, certificates, tickets, etc., exceeds £10,500 annually.

2105. I suppose a great deal of that total of £10,500 is expended in waiting rooms or offices and things of that kind, the expense of which would have to be borne whether you had a continuous discharge system or not?—Only a small proportion of it. Our total cost is about £15,000, including our registry offices, etc., which are also used for other purposes. We have over 180,000 tickets issued, and there are only about 70,000 benefit books; but we don't, in our own minds, make any de-

duction on that account; and to carry on the benefit scheme itself we should require this outlay.

2106. The whole £10,500?—Yes. We have some extra outlay for outdoor officials and messengers who might not be all required if it was only a benefit scheme.

2107. A number of officials would not be required if you had no benefit scheme?—I should think about one messenger in each office or one outdoor official.

2108. Do you think that the whole extra cost entailed upon you by the benefit scheme amounts to £10,500 per annum?—Yes, that is what we estimate.

2109. Would you save that amount if you did as other shipowners do in the matter of engagements?—Yes, if nobody else took up the benefit scheme and we allowed it to lapse.

2110. Supposing you did as other shipowners do, and engaged seamen in the ordinary way, and did not have tickets or a benefit scheme, would that save you £10,500 a year?—Yes, I think it would; if we did nothing to try and regenerate the seamen we should save the whole outlay. The amount I have quoted is purely for staff expenses and appliances, and does not include the cost of our erections and buildings where these are required for other purposes.

2111. Do you yourselves subscribe to the benefit scheme, or is the fund got together by the men?—The seamen do not pay a farthing for it.

2112. You yourselves do the whole of it?—Yes.

2113. I suppose the shilling you charge for the parchment ticket goes towards the expenses?—No. We have thousands of parchment tickets in currency where the men have never taken books.

2114. Does the price they pay for the parchment ticket go into the benefit fund?—No, it goes only a very little way towards providing the various waiting rooms and comforts with which they are furnished. The seamen without the ticket would not be entitled to use those rooms and to smoke in them, and rest, and read papers and write letters. Perhaps all that is, to some extent, rather sentimental, nevertheless we do it.

2115. I don't think it is sentimental. I understand the books have to be renewed annually, and that a considerable number are lost or destroyed?—A considerable number of paper and parchment tickets and benefit books are lost and destroyed annually; if by wreck or accident no duplicate fee is charged, if otherwise a shilling is charged for book and sixpence is charged for re-issue of tickets.

2116. When you renew a book, how do you find out what a man's service has been. Have you got your own register to refer to?—When a book has to be renewed the man generally writes a letter giving his excuses, which are various, stating that serious illness on the part of himself or his family or something of that sort has prevented him joining his ship; but sometimes a man frankly admits that he got drunk and missed his ship. In those cases we believe him; in other cases our officials have to inquire sometimes into the matter locally. We are not at all hard upon the seamen; they generally write those letters in the local seamen's mission or Bethel room; most of such letters as we get seem to be headed in that way, and no doubt they get a little help sometimes with their letters, so that plausible excuses are given why they did not join their ship, or why they deserted.

2117. Supposing a man is shipwrecked and in that way loses his book, and then comes to you and asks for a duplicate of it, how can you furnish him with a duplicate? have you got your own record of his service?—Yes, we have his record in our books. We have large entry books, in which the men's services are re-dated.

2118. You keep in your own office a duplicate record of all the services which your men perform?—Yes, that is so, when they re-date.

2119. You were telling us of men who get drunk and lost their books through not turning up. Do I understand you to mean that when the men have signed the master takes the books?—Not quite that. The master takes the ticket, but not the book. The book is left in the seaman's own hands—he is advised not to take it on board ship, but to leave it at home with his beneficiaries, but in many cases the seamen take the books and lose them. In some cases where the books have been produced we have had evidence in their appearance that they have been under water.

2120. The master takes the parchment when the seaman signs on?—Yes.

2121. And if the seaman does not join?—Then the master sends the ticket to the office, marked "Deserted" or "Failed."

2122. I suppose the plausible letters you have described are written when the men want the parchment and book back again?—Yes. They write that they are sorry for what occurred, and they give their reasons or excuse, and say they are seeking work on such or such a Federation vessel.

2123. When a man presents himself for engagement on a Federation vessel it is not sufficient, is it, for him to present the book; would he have to present both the parchment ticket and the book?—Yes, the two together. There is a pocket in the book in which the parchment ticket is put. The ticket is for the master to hold and the book is for the man himself to hold. I may explain that we keep our register system entirely apart from our benefit system in different books at the office. Every man has to have a register ticket, but he is not compelled to hold a book or benefit ticket unless he cares for it. We are therefore obliged to keep two sets of office books, one for the register and the other for the benefit branch. I could have these books brought here and shown to the committee if desired so that they could see the whole business.

2124. I should be glad if you would kindly do that?—Certainly; I brought them before the Manning Committee.

2125. (Mr. Clark Hall.) I understand that the voyages are not posted in the register tickets, and the tickets only show the man's name, etc., but no record of his voyages?—That is so, except that the man, when he comes to renew his ticket, must present his intervening discharges, and these are stamped.

2126. (Chairman.) These are the ordinary Board of Trade discharges?—Yes, we don't deface the front of them, but stamp them on the back.

2127. Is there much complaint about the entry of bad character, etc., in the book, and do men with bad character wilfully destroy the books and try to start afresh?—No entries of bad character have been made as yet, owing to the Marine Department not being prepared to supervise the entries required; but for statutory offences the books have in many cases been forfeited or suspended.

2128. What does that mean, that no entries of bad character have been made as yet?—I mean in our certificate books. When we first entered into the scheme we hoped for the assistance, to some extent, of the Board of Trade officials—at all events to the extent of putting their stamp upon the record of service, but it appeared that that could not be done.

2129. Would not that mean doing away with the Board of Trade certificate?—No, but our stamp is not evidence to strangers, whereas it would be different with an official stamp.

2130. When one of your seamen is discharged, a full certificate holder, he has his voyage entered in the continuous record, and if he likes he has it stamped with your own?—Yes.

2131. And your own mark of conduct?—Yes, for ability only.

2132. And in addition he gets the ordinary Board of Trade discharge as well?—Yes, we merely copy the Board of Trade discharge so far as the point of ability is concerned.

2133. Is nothing done to a man's parchment ticket at the end of the voyage?—No, unless under special circumstances, as when the Captain sends it back when a seaman has deserted, he writes "Deserted" on it and returns it to the office of origin.

2134. Ordinarily at the end of a voyage the ticket is not endorsed?—No, but every time it is re-dated a renewal stamp is put upon it—a 6d. stamp.

2135. As you don't put any entry of bad character upon the certificate books, I suppose these books are not destroyed?—They are seldom destroyed, except perhaps in the case of some strike or dispute where the men have been persuaded to destroy a few of them.

2136. Why?—They are sometimes persuaded that the ticket or book is a badge of slavery, and they are persuaded to burn a few, but we generally find that they only burn the ticket, and keep at home the books, which are afterwards forthcoming.

2137. I see that you have on the book a column for ability?—Yes, and special pages for conduct.

2138. Supposing that a man has a series of voyages

entered and no mention at all of his ability, would not the master draw attention to that and tell him that if he were a good man he would have thought that he would have had his "excellent" or "V. G." stamped on the discharge sheet?—You may take it that all the books, or nearly all, are filled up with the "V. G."

2139. Then the ability column is filled up?—Yes.

2140-1. (Chairman, to Witness.) But are you not making "V. G." apply only to ability?—We have special pages for conduct.

2142. And the conduct pages are not filled up?—No. You will find that in the Naval Reserve books there are special pages for conduct, and we adopt the same plan. We do not wish to be harder than necessary on the men. If a Naval Reserve book shows a man has deserted his ship and has had his allowance stopped, we consider that that is a bad character; we consider that an indication of conduct.

2143. (Mr. Howell.) Would you not make a similar entry to that in your book?—Certainly, but we would rather not do so on the *ipse dixit* of our master alone, when Board of Trade officials have the log and can see whether an entry is properly made.

2144. How does it happen that you have to enter a man in your books after the Naval Reserve have entered him in theirs?—I assume that nearly all your men go on serving voyage after voyage in your own ships?—Yes, but not in the same ship. They go from ship to ship.

2145. But all Federation vessels?—Not always.

2146. If a Naval Reserve man joins one of your ships, being a Federation seaman, and deserts, would the fact of his having deserted be first of all entered by the Naval Reserve authorities, or by you?—We should only enter it if we found it recorded in his Naval Reserve book, but we officially do not examine it for other purposes.

2147. You could only have cognisance of a desertion if the sailor happened to be a Naval Reserve man, and if he deserted from one of your ships?—Yes, it would be entered.

2148. You would know as much as the Naval Reserve about his desertion?—Yes, but not at the same time. There are desertions and desertions. Some are merely drunks. If the ticket is returned, marked "deserted," the book is forfeited or suspended.

2149. (Mr. Clark Hall.) If a man deserts, there is very rarely a specific record of his desertion. It is merely indicated, I suppose, by a blank in the column where his discharge should appear. I assume that the Federation rarely obtain from the Royal Naval Reserve book a statement that a man has deserted?—It is sometimes expressly recorded in his book that he has deserted.

(Mr. Clark Hall.) There is an absence of the record of discharge, that is all.

2150. (Chairman.) Does the Naval Reserve man keep his book when he goes to sea?—He does.

2151. When he comes home from a voyage what does he do with his Naval Reserve book?—He produces it to the registrar. I should remind you that he ships before a superintendent of the Mercantile Marine and the book is returned to him. He retains it during the voyage, and on his discharge he produces it to the register of Naval Reserve, who enters his discharge. If there is a blank in the discharge column that is an indication that he has deserted.

2152. If the engagement is entered, and there is no entry of his discharge that is obvious to the person to whom he applies next for employment, and the inference would be that he had deserted. Is that the only evidence there would be of his desertion?—Not quite. Mr. Clark Hall has told you what is the actual practice so far as concerns the register of the Royal Naval Reserve in each office. The actual offence is not registered in the book, but in the case of a Naval Reserve man he has eventually to come up for drill, or in order to get his retainer, and then is the time when the facts are found out. If there has been a desertion that is entered and the retainer is reduced.

2153. (Mr. Clark Hall.) Is that not in very rare cases?—I hope it is rare, but we have had a few such books sent to us where the desertion is entered.

(Chairman.) How can the seaman avoid having that entry made, and how does he get over it when the time comes for him to take his book to the paymaster.

(Mr. Clark Hall.) It is not a penal offence to desert. We see what sort of a record the man has, and if it is his first desertion we do not punish him but warn him.

Mr.  
G. A. Laves.  
23 Nov. 1899.

Mr. A. Laws. (Chairman.) Is there no entry made in his book?  
 23 Nov. 1899. (Mr. Clark Hall.) There is an entry if we stop a retainer, but there are many desertions where we do not think the man's character is really bad. He may have been left behind through illness or some other reasonable cause.

(Chairman.) Then I understand the paymaster refers the matter to you, and if it is not a bad case you take no serious notice of the man's offence?

(Mr. Clark Hall.) Quite so.

(Captain Chalmers.) If it is rather a bad case and the man's retainer is stopped, do you enter the fact that he has deserted?

(Mr. Clark Hall.) We put in the words "retainer stopped."

(Witness.) I have seen books where the entry was "deserted" and "retainer stopped."

(Mr. Clark Hall.) That may be so in some few cases as there is no precise or invariable formula.

(Witness.) I thought it was done by the Registrar of the Royal Naval Reserve and not by you.

(Mr. Howell.) Is it not a fact that in the case of Royal Naval Reserve men retainers are stopped for other offences besides desertion?

(Mr. Clark Hall.) Yes.

(Mr. Howell.) Then, if the entry were that the retainer was stopped it would not necessarily be inferred that he had deserted.

(Mr. Clark Hall.) No, but that he had committed some offence.

(Captain Chalmers.) The inference would be pretty obvious if the column for entry of discharges was blank, and the words "retainer stopped" were added.

2154. (Chairman.) Would the men prefer that the discharge should not show continuous conduct, character, and qualifications?—My impression is that the steady family man would prefer to have entries of character for each voyage, in the continuous records of service. The unsteady men or wasters would naturally prefer to have service without any record of conduct, but these men do not apply for benefit books; if they do, they soon lose them.

2155. Why don't you, in the interests of the steady men, establish a record of conduct?—We are most anxious to do so, but we feel that it must not be *ex parte*. We must have the Government stamp affixed in order to make it of real service.

2156. But surely you are powerful enough, if you govern nine-tenths of the seamen in the foreign trade?—That may be so, but I don't know whether we should be considered impartial enough; we should have to take the statement of our own captain, and the log book in each case would be in the hands of your officials, who could thus see whether the entry has been properly made. I hope to draw your attention to some entries in a log book which refer to a class of men whom we rather desire to exclude.

2157. Have you already certain offences which would exclude a man?—Yes, mutiny or desertion or failure to join after cashing an advance note purposely to defraud someone. A class of seamen make a business of that sort of thing, and these men we don't want to keep upon our books.

2158. An offence of that sort must be entered upon your books?—Yes.

2159. That might forfeit the book and the employment?—Yes, and the benefit which a seaman might otherwise receive if he were injured, or which his relatives would receive if he lost his life.

2160. Do you find that many of the steady men voluntarily have their characters entered in their books?—We have found a moderate number who are anxious to have their characters entered, and there are others who are rather proud to have meritorious services entered, such as saving life at sea or other distinguished cases where perhaps presentations have been made at Lloyd's. These have been entered and the entries have stood the seamen in good stead afterwards.

2161. If a seaman has such entries is he given any kind of preference?—Yes, the book itself carries some preference. If there are waiting in the offices for crews a certain number who hold benefit books, the master would have authority to choose them first.

2162. That is a preference created by the benefit book

as such, but not as against the contents of one benefit book compared with another. I understand from you that all the holders of a benefit book are given a preference over those who hold merely paper tickets?—Yes.

2163. But do the men who have their characters entered in their benefit books get a preference over those who have no such entry?—That would be so if the number with benefit books was in excess of the whole number required. Then the captain would make a selection. But that very seldom happens; in fact, we sometimes have forms sent to us by owners who have satisfaction in showing from them that every man on their list was the holder of a benefit certificate.

2164. Is the custom increasing?—Yes, seamen are improving in that respect.

2165. (Mr. Howell.) Is it not a fact that you have recently introduced some modifications into your system?—Yes, we have practically doubled it.

2166. (Chairman.) Doubled what? Doubled the number of books issued?—Not quite that; but we have doubled the amount of benefit in the books, so that even selfish or careless men shall not be able to deprive their widows of the death allowance.

2167. (Mr. Howell.) I think I have a print here of the proposed changes in your benefit system?—Yes, it got into the newspapers. We did not want it to get published until the changes came into force in January, but when a copy is sent to about 3,000 shipowners the facts leak out.

2168. Is the print a fair statement?—Perfectly. It is a nearly verbatim reprint from the original document, which I will submit.

2169. (Chairman.) I gather from the print that it is an extension of your scale of benefits?—That is so.

2170. Has it had the effect of increasing the number of men taking advantage of the system?—It is not in operation yet, not until January next. It has taken a whole year to get it prepared and agreed to. There has been a number of documents to alter, and a very large number of shipowners have had to consider it before they agreed to it.

2171. You hope it will have the effect I suggested?—Yes.

2172. Do you find the seamen continue as a rule at sea, or do they take shore employment either permanently or temporarily?—A large number of seamen undoubtedly take suitable employment ashore after some years' service. They act as riggers, dockers, in shore gangs, and as Fire Brigade men, etc. But the unsteady men can, as a rule, only retain shore employment for a short time. I went into that question very carefully when I received a set of queries from this Committee. I sent round to all my districts, and perhaps it would be useful if I were here to read a schedule showing the nature of the employment ashore taken by a seaman. These particulars refer to the Tyne district, and the date of them is 17th of May last.

#### SCHEDULE.—NATURE OF SHORE EMPLOYMENTS TAKEN BY SEAMEN.

##### TYNE DISTRICT RETURN. SAILORMEN.

|                            |     |                          |     |
|----------------------------|-----|--------------------------|-----|
| Riggers and runners        | 200 | Fishing Vessel A.B.'s    | 500 |
| Shipbuilding yards         | 500 | Pleasure boatmen         | 20  |
| Dry dockers, scrapers, &c. | —   | Hobblers and foy boatmen | 100 |
| Shore gangs                | —   | River boatmen            | 50  |
| Stevedore gearmen          | 50  | Ferries and tug boats    | —   |
| Fire brigade men           | —   | Dredgers and hoppers     | 200 |
| Scaffolders                | —   | Landing stage men        | —   |
| Bridge painters            | —   | Ship watchmen            | 75  |
| Electric wire fixers       | —   | River policemen          | 15  |
| Steeple jacks              | —   | Boarding house runners   | 10  |

##### FIREMEN.

|                                 |     |              |    |
|---------------------------------|-----|--------------|----|
| Land engine furnace men         | 250 | Dock coalies | —  |
| Locomotive and traction stokers | —   | Gas stokers  | 30 |

Total sailors . . . . 1,720  
 „ firemen . . . . 230  
 Total seamen . . . . 1,950

We have returns of men working more or less in similar calling in other districts. I went into this matter more closely in the London districts, where we have peculiar facilities for doing so, and I can give you the number of seamen employed as dockers. We find that there are 26½ per cent. of seamen, both sailors and firemen, employed in the docks in various ways; that figure rather astonished ourselves as we had not realised that we had so large a reserve of men in that way. We have in London a labour office for dock workers, and seamen are registered there so that they can be followed up, and they most willingly gave us information, and produced their certificates showing that they were, or had been, either seamen or firemen. The following are some particulars upon the subject, which may here be read.

## SEAMEN AS DOCKERS.

On Tuesday, 23rd May, the London Grain Elevator Company had 323 men employed as dockers discharging s.s. "Montcalm."

|           |                      |
|-----------|----------------------|
| 65        | Sailors.             |
| 3         | " Bo'suns.           |
| 3         | " Firemen.           |
| 252       | " General Labourers. |
| <hr/>     |                      |
| Total 323 | 22 per cent. Seamen. |

On Wednesday, 24th May, the New Zealand Shipping Company had 100 men employed as dockers, discharging s.s. "Papanui."

|           |                      |
|-----------|----------------------|
| 15        | Seamen.              |
| 4         | " Bo'suns.           |
| 1         | Sailmaker.           |

| Total 100 | 25 per cent. Seamen. |

On Thursday, 25th May, The Atlantic Transport Line had 340 men employed as dockers, loading and discharging the s.s. "Europe" and s.s. "Marquette."

|           |                      |
|-----------|----------------------|
| 116       | Seamen.              |
| 224       | " General Labourers. |
| <hr/>     |                      |
| Total 340 | 34 per cent. Seamen. |

The Peninsular and Oriental Company have 172 preference Stevedores on their list—76 per cent. labourers, 23 per cent. seamen.

The British India Company have 142 preference stevedores on their list—78 per cent. are labourers, and 21 per cent. are seamen.

## ABSTRACT.

|                                   | Labourers. | Seamen. | Total. |
|-----------------------------------|------------|---------|--------|
| London Grain Elevator Company -   | 252        | 71      | 323    |
| New Zealand Shipping Company -    | 75         | 25      | 100    |
| Atlantic Transport Line - - -     | 224        | 116     | 340    |
| Peninsular and Oriental Company - | 181        | 41      | 172    |
| British India Company - - -       | 111        | 31      | 142    |
| Total - - -                       | 793        | 284     | 1,077  |

I should explain that these figures were obtained, of course, before the reservists were called out.

2173. I suppose that, as a rule, these men would remain ashore as long as they could get work at the docks?—Yes, because steady men there can make at the rate of about £6 a month; but they have to keep themselves out of that.

2174. Is that better pay in proportion than they would get at sea?—Good men get fairly steady employment at practically about £6 a month in the home trade vessels, by which I mean the coasting and short sea traders, and they find themselves; but they are a comparatively limited number. They get from 30s. to 32s. 6d., except in the Clyde, where they receive 28s., with some odd allowances which may bring up the total to a little over 6l. a month. I have made inquiries at the dock, and find many of the men say that if the wages on board ship went up to 6l. a month they would prefer sea employment.

2175. You mean if the wages afloat went up?—Yes. If the wages at sea went up to 6l., many of the men who are now dockers would go back to sea, and would get a little

benefit; because they would, in addition to the 6l., get their food.

2176. Do all the foreign boats feed their crews?—Yes. But the wages range from 4l. 10s. to 5l. per month.

(Captain Chalmers.) A seaman cannot be kept on board ship under 7s. 6d. per week.

2177. I gather from what you have said that the Federation and the Chamber of Shipping would like to see some kind of continuous discharge adopted by the Board of Trade. Have these bodies any particular view as to the form of discharge that should be adopted?—The Federation Executive consider that the Board of Trade 1884 Certificate and Continuous Discharge Book would be serviceable, with a column, or special pages for conduct added. They also submit that some principle of reward or "inducement" should be offered to seamen in respect of any Continuous Discharge Certificate which the Board of Trade may hereafter approve.

2178. I notice you want a special column for conduct; but why not fill up your own conduct columns?—I go on to answer that question a little later, if you will permit.

2179. Very well; but should we not have to face the same difficulty with a conduct column as you would have to face?—As a State Department you have the power of making the men better men altogether by a judicious system of entering these offences. The offences would become very much fewer. At present few shipmasters have the courage to give an absolutely true character, nor do we think they should be called upon to record offences in the discharge certificate. We think the Board of Trade officers should be the judges, and should make the record. The master is required to make a true statement as to the character of the men during the voyage, but to whom does he make it? To the Board of Trade officers. To the officer who discharges the men, and the section provides that the discharge is to be given in the form approved by the Board of Trade. What happens now is this, that a shipmaster, although he has properly logged certain men, dare not turn round to them and say that in accordance with the log he is going to give them a "D." The seamen, in such a case, might become violent; and, as a shipmaster would rather avoid a row, he gives a "V.G." and says no more about it. We want the Board of Trade officers, as Government officials, to be responsible for giving a good character to a bad man.

2180. And have the half brick thrown at them?—Oh, no; please don't put it that way. A seaman might heave half a brick at me if he knew who I was, but not at a policeman, unless the seaman was very drunk indeed; but he is seldom so drunk that he cannot recognise an officer. Whatever may happen in future years, there is still respect shown for State officials, from the highest down to the man in blue. The Board of Trade might undertake such a duty with the greatest safety.

2181. (Captain Chalmers.) If the Marine Superintendent finds a V.G. opposite the man's name in the log book, he is bound to put that in the discharge certificate?—Yes, under the present system.

2182. But if he finds bad entries and no condemnation following he may refuse to sign the discharge certificate?—I think not often.

2183. Have you never found a discharge without the superintendent's signature?—Never; I cannot recall a single case.

2184. (Chairman.) Does it not happen that men who have been logged during the voyage for offences are yet given a V.G. mark when discharged?—That is so, and it is a misfortune.

2185. Do you think the superintendent ought to be able to turn to the Captain and say, "I refuse to allow you to give this man a V.G., because you have already logged him"?—We suggest it should be done in a different way altogether. The master puts into his log book a note of the offence, properly recorded and witnessed. The Board of Trade officials afterwards have that log, and if they had a certain amount of magisterial power over such offences the whole thing could at once, and easily, be inquired into. The crew could state why some of them signed the log, and the officer at the close of the inquiry might refuse a V.G. discharge to the man, and might say "I shall give you a decline. The seaman would take it home; he would not tear it up in the presence of the official, but he might tear it up at home, or perhaps he might try to alter it into a V.G., as is done in hundreds of cases.

2186. (Captain Chalmers.) What you suggest would require legislation, would it not?—I think not.

Mr.  
G. A. Laws.  
23 Nov. 1899.

Mr.  
G. A. Laws.  
23 Nov. 1899.

2187. Who has to fill in the official log?—The captain.

2188. Is not the superintendent strictly enjoined in the section only to enter in the man's character for conduct the entry which may appear in the log book: only this must be done in the form approved by the Board of Trade. The superintendent has simply to give a copy, and no doubt you will agree that a copy cannot differ from the original?—I am talking of the cases where the official log does not bear V.G., but where a seaman, nevertheless, gets a V.G. discharge. Perhaps it would be convenient here to read extracts from the official log of the ss. *Strathcarron*, now named the *Heathdene* (log book produced). They are as follows:—

Port Said, March 5th, 1899.

"This certifies that W. Bell, fireman, is drunk, and used threatening language to the chief officer and master, and others; intimidated sailors and boatswain who were called aft to put Stephen Carroll forward by using threats of violence, which deterred them from doing their duty. He came upon the bridge and impeded the navigation of the ship in the Suez Canal, using threatening and abusive language to the master. He was told to go away, but refused to obey orders, and wanted to see who could put him in irons, saying all hands could not do it. He made several attempts to get a footing upon the navigation bridge and assault the master, and interrupted the orders and navigation of the ship and the safety of all concerned, for over an hour, when he went away, and order was restored.

"(Signed) F. J. J. Quicke, Master.  
"J. S. Smailes, C.O.  
"W. R. McCarthy, 2nd Officer.  
"P. J. Plumer, Boatswain.  
"R. Atkey, 3rd Mate."

The next log entries I would read are these:—

Bombay, March 29th, 1899.

"This certifies that Stephen Hare, J. Jonson, Charles Hodges, Lachlan McFarlane, James Carr, and W. Bell, firemen, came aft. They reported that Mahomet El Daim (the Arab) fireman was threatening them with a crowbar; an inquiry was made, and M. E. Daim said they were illusing him and beating him, and that he did nothing but try to defend himself. I spoke to the firemen about the brutal way they used this man, and they said he was dirty, etc., which I proved to be untrue. I again warned them, when Lachlan McFarlane, who appeared one of the spokesmen, said the Arab must be kept down, etc., meaning that he was to be subject to their ill-treatment when they pleased. I told them to go away, and not ill-treat the Arab, or I would have them punished, when they all said they would do no more work, and that I was to hoist the police flag, and they did not care about going to prison, and waved their arms above their heads, and made a great noise, and threats of different sorts to all and sundry; they at last went away.

"(Signed) F. J. J. Quicke, Master.  
"J. S. Smailes, C.O."

St. Nazaire Roads, May 12th, 1899.

"This certifies that Stephen Hare, J. Jonson, C. Hodges, Lachlan McFarlane, and W. Bell, firemen, refused to turn out of their bunks when ordered, and get their bedding and clothes into boat to be taken ashore for fumigation, as ordered by the Port Authorities, as ship was in quarantine. They were very abusive, and used threatening language to both the master and chief officer. The master told them that if they did not obey they would be prosecuted for refusing duty; they then got out, and said they were sick and unable to work, and made all sorts of malingering excuses to delay the process, and detain ship. These men were taken before the Port Surgeon, who said they were quite fit for work, and any effects of the chloride used for fumigating the berths went off in a few minutes with the fresh air, but to give each man a little spirit, which was done on our returning on board, and the firemen then went to work. I regret to state that those men have been, more or less, in a state of insubordination during the whole voyage, malingering and causing much expense and detention to the ship by false pretences of illness and other things.

"(Signed) F. J. J. Quicke, Master.  
"J. S. Smailes, C.O."

St. Nazaire, May 15th, 1899.

"This certifies that the entries against Stephen Hare, J. Jonson, Lachlan McFarlane, W. Bell, and James Carr, and Charles Hodges, fireman, has been duly read over to them. James Carr said he was sorry he did not go to prison in Bombay, as he would have got a job on the railway. Lachlan McFarlane said to Hodges: 'Why did you not lay up? I thought he would have us in the log.' The

rest joined in and made a great noise, shouting that they would see about it, etc., and James Carr said he had a few pounds, and did not care if he lost the damned lot. They were ordered to go to their duty, and went.

"(Signed) F. J. J. Quicke, Master.  
"J. S. Smailes, C.O.  
"M. S. Danks, Steward."

St. Nazaire, May 15th, 1899.

"This certifies that the Consul came on board to see the firemen, who had nothing to say beyond that they wanted to have the entries against them taken out of the official log, which the Consul said could not be done. They (the firemen) promised the Consul to behave themselves in future, and the master promised not to charge them any expenses incurred at St. Nazaire on that condition.

"(Signed) F. J. J. Quicke, Master.  
"J. S. Smailes, C.O."

Although the ship's log contained such entries as these, most of the men—indeed all but one—got "V.G." How they got it I don't know. They did not get it from us. I am not going to say that some of these discharge certificates may not have been altered in the way I have suggested; but it is difficult to do it. At present it is competent for a captain to forgive a seaman all his offences, although they have been logged, but he should not be allowed to do so.

2189. (*Captain Chalmers*.) In this log book the captain in most cases declined to give a character and the superintendent's certificate would have to be a copy of that—a "D."?—I understand most of these men got a "V. G.," although reported by the captain. As a matter of fact, the worst man in this case went off almost directly in another steamer, or in the same steamer renamed.

2190. Is your point this, that if the character given in the official log is inconsistent with the entries in the log book, our superintendent should have absolute power to alter it or to compel the master to alter it?—Yes, that the responsibility should rest upon your superintendent to see that "V. G." was not given to men who had been logged for misconduct.

2191. Would not that require legislation?—We think not.

2192. The superintendent has simply to give a copy of the entry in the official log?—But he should see that the entry in the official log is correct so far as the "V. G." is concerned. There are some strong masters who give the "D." and run the risk; but many do not. May I here read the following extract from a letter from the captain of a Hartlepool steamer, written to his owners on September 24th, 1898:—"We entered Port Said about 7.30 p.m. on September 10, 1898, and after being moored I went on shore to sign an additional fireman. About 10 p.m. I had this man signed on, who was ordered on board at once. About 11 p.m. I learned on shore that this man had been on board, but had deserted. It appears that some of our firemen had threatened to throw him overboard, and had assaulted him. After finishing at the agents I went on board at 1 a.m., pilot being there, when I was informed that most of the firemen were intoxicated, and had been fighting amongst themselves. It appears that the chief then went forward to question the men about this, when they insulted him, and when, after leaving the fore-castle, he came on the deck in the dark, they rushed at him and assaulted him. When I came on the scene, after hearing noise, the chief engineer was down on deck, and a fireman on top of him, the other two standing in readiness with their belts and other instruments. I separated them, got assaulted accordingly, but with the assistance of the second and third engineers we quieted them. The chief, of course, got the worst of it, bleeding from severe wound on his head and face, and his forefinger badly bitten. The engineers and part of the crew now came to me with the request to get these men out of the ship, as they had been threatening everybody and there would be murder next. I then sent for the police, who arrived under Inspector Holmes, and gave these three men in charge. I went to the Consul, and he informed me that if I proceeded on the voyage he had to send those men back on board again. Of course this would not do, for, in the first place, there would have been no more discipline, and perhaps murder next. Apart from that, these men would have refused work, and we might have lost days on the passage to Bombay, so I resolved to stop the ship until Monday morning for prosecution. The chief engineer had to be attended by a doctor, and J. — was sent to the hospital that night. The trial commenced at 8 a.m. and finished at 11 a.m.

on September 12, 1838. Result:—J. — got 60 days, A. T. — 70 days, and J. — 80 days' imprisonment. I am sorry to say, as told by the police, that it is only in British ships where this kind of work daily happens, as there is and can be no discipline, the law being inadequate." I communicated about this case with the Marine Department of the Board of Trade, and Mr. Ingram Walker wrote to the Consul, who practically confirmed what the master had said. And now here is a sample of such letters as we continually receive. It is written by an engineer to his owners:—

"S.S. 'Windsor,'

"Port of Malta, May 12, 1899.

"James Spence, Esq.,

"Messrs. Watts, Watts, and Co.,

"7, Whittington Avenue, London, E.C.

"DEAR SIR,—

"Everything I am pleased to say working well. I will not be able to do much here, as I expect we will get away to-morrow.

"Sorry to say I have got a sweet lot of firemen this trip (Englishmen), three of them on the drink to-day. I will never have any more; all foreigners after this.

"I remain,

"Yours respectfully,

"(Signed) Thomas B. Miller."

2193. Is the trouble chiefly among the firemen?—Yes. We have comparatively little trouble among the deck hands.

2194. (Chairman.) In an early part of your evidence you spoke of inducements. What forms of inducement would you suggest?—Inducement A.—Competent ordinary seamen or boys, able to produce three years' continuous record of service, and good conduct, should be "entitled" to have the rating of A.B. entered on their continuous discharges. Inducement B.—There should be the superior rating of first-class able seaman or fireman, obtainable only by those A.B.'s who can produce at least twelve months' continuous record of good conduct and service. Inducement C.—There should be official ratings for executive petty officers entirely dependent upon clean records of service for conduct, ability, and sobriety.

2195. Do you wish to say anything about the form of discharge certificate now in use?—Yes. I would like to point out that since the advent of steam, and very short voyages, the present form of discharge has great disadvantages.

2196. What are the disadvantages you refer to?—They consist principally in the facilities offered for personation. A seaman obtains four or five in one year; some of these fall into the hands of crimps, who adapt them for introducing substitutes, without sea service.

2197. Are there no means of identifying the rightful holder?—None whatever. The name and age appear, but the place for signature is not convenient, and the seaman seldom signs his name in it. When the papers are gummed into covers the signature, if any, is obscured. That is merely a defect in the printing, which could be easily amended. (Example submitted.)

2198. Then do you think that these disadvantages may be remedied by adopting another system?—Yes. Shipowners believe that by adopting a continuous record for a lifetime on single document, you at once limit the available certificates of discharge, to the number of seamen employed. The crimp will then be unable to make seamen substitutes with the same ease as at present. I once had about 50 discharges in my office which had been altered to suit different seamen by one woman alone—a boarding house mistress.

2199. Would there not always be a certain number of seamen retiring from the service whose certificates might be available for such purposes?—Yes, certainly, but the exact description of the holder would appear, and his signature, so that personation would be very difficult. Besides, a document which contains a record of, say, ten voyages or more would not be parted with so readily as when there are ten separate papers.

2200. Have you any actual evidence of this?—I think so. We find, for instance, that Royal Navy discharges, and R.N.R. books are very carefully preserved; the crimps seldom touch them.

2201. Do you suggest any method by which an official record may be kept of the continuous discharge certificates issued?—The continuous discharge certificates might be worked in connection with a registry system, the certificate itself being used as the numbered ticket.

2202. In whose custody should these certificates remain during a voyage? They should be handed to the master on signing articles. They would thus be held as some security for advance notes. They would be returned to the seaman with the voyage recorded, when signed off agreement.

2203. What do you suggest in case of death, desertion, etc., during voyage?—The C.D. certificate of deceased seamen, or deserters, should be handed to the Consul by the Master during the voyage, for return to the Registrar-General's Office. The balance of wages due, or forfeited, should be entered at same time.

2204. Would not deserters in this way be left abroad without means of obtaining employment?—In practice he would not be absolutely deprived of employment, but the master shipping him would know what had happened. The seaman would probably by good conduct during the voyage seek to rehabilitate himself.

2205. Then you would contemplate returning the certificate to the deserter at some time?—Yes, for first offences, but they should be returned in this country only, and on payment of an increased fee up to third time, after which they might be cancelled or suspended.

2206. Do you suggest any course in regard to desertion and similar offences?—Persistent desertion abroad should be the subject of some deterrent punishment, such as compulsory naval service, rather than imprisonment.

2207. In your opinion should there not be some obligation on shipmasters in regard to desertions abroad?—Yes, the master of a vessel should be under a penalty to bring his crew home, or provide evidence of death, and Consular certificate of desertion, or disappearance. In the American service a master is under penalty to bring every man back to the country.

2208. Would you have the master fined if one of his men deserted?—No, but he would have to prove that it was a real desertion, and that he had not driven the man out of the ship.

2209. In what manner do you suggest that records of character should be reported?—The present system (section 129) should be more rigidly enforced. The master should be required to make a true report in case of gross misconduct; then the responsibility for giving V.G. or D. should remain with the M.M. superintendent.

2210. Would that not be rather a difficult duty for the superintendent to perform, so as to satisfy both parties?—It would, but the M.M. superintendents should be experienced men, and might be appointed as magistrates for the purpose. Then with the official log before them, they could also hear the seamen, and decide at once.

2211. That would appear to be creating special courts of first instance; is that desirable?—Yes. Many shipowners hold that it is very desirable that seamen should have a cheap and ready court for deciding voyage disputes.

2212. Have you any views as to how evidence of character should be recorded?—Records of bad character should not be entered in the continuous discharges, unless the seaman has been officially logged, say, for mutiny, desertion, or other statutory offences, proved before a court, or Consul, or M.M. superintendent by agreement.

2213. How would you deal with the question of sobriety?—Records of sobriety should not be entered in continuous discharges unless seaman requests, but all seamen requiring certificates for superior ratings should produce proof of sobriety.

2214. Do you think there are enough men who would care sufficiently about the superior rating to take such trouble about the discharges?—Yes, I think so; especially if the superior rating implied that they would have superior pay. Whenever we can separate the really good from the bad, we should give the former higher wages. The good men are worth more money to us. Really first-class steady firemen are worth more than their present wages if we could get the men. There is little or no inducement now for a man to be sober, or to be worth a better rate, for the intemperate man gets the same wages as the sober man.

2215. Do you wish to refer to any of the existing forms of discharge in support of the views you have stated?—I wish to hand in examples of the Australian and New Zealand Discharges, and to point out, that though these colonies are governed on democratic principles, conduct, ability, and sobriety are mentioned in the Certificate of Discharge there used.

2216. Have you any others you wish to produce?—I hand in copies of Royal Naval, Royal Marine Artillery,

Mr.  
G. A. Laws.  
23 Nov. 1899.

Mr. also American Naval Discharges, to show the methods adopted for recording conduct of the men.

G. A. Laws. 2217. The continuous discharge systems in some foreign countries have relation to the conscription?—Probably so.

2218. I don't think there is any country abroad which has adopted a continuous discharge system for philanthropic as apart from State reasons?—None that we know of.

2219. Are there any other points you wish to bring before the Committee?—I would like your permission to read a few very brief extracts from the evidence of Captain Beechey, R.N., before the Manning of the Navy Committee in 1852. He was a Board of Trade Official, and his remarks bear very strongly upon the value of a registry system, such as the Shipping Federation has adopted. Question 14 reads as follows:—"Will you favour this Committee with your opinion as regards the working of the Act for the registration of seamen, and whether it has been attended with the beneficial effects to the shipowner, shipmaster, and merchant seamen?" In his answer Captain Beechey said: "Its principal use may be said to be that of identification of persons. For without identification there can be no certain and systematic record, either of services or of character." That was a very strong point with us. He refers to the register ticket, as follows:—"I shall now pass to the register ticket, or document, which, although it has been in use several years, appears to have its real use and advantages very imperfectly understood by you, and I think I cannot do better than repeat what I said upon this subject to the deputation of seamen at Sunderland." He adds, "The description of his person being recorded on the ticket proves that he is the man he professes to be. An

impostor who might use a lost or stolen ticket is easily detected. It is the duty of all masters of British ships, before leaving foreign ports, to call upon the British Consul, or at the Custom House of a British possession, and give up the register tickets of deceased or deserted seamen, and the tickets are sent to the registry office in London, where they are carefully kept, and the cause of them being returned is recorded. Any person writing to that office, to know if a ticket, having such a name and number, has been returned, will receive an answer accordingly. . . . As to the trouble of taking care of register tickets, that consideration vanished when their usefulness was known and remembered. It might be troublesome to take care of a watch, or a purse, or anything else; but the utility of the article reconciles us to the charge. As to considering a ticket a badge of degradation, because seamen could not obtain employment without it, he (Captain B.) might with equal propriety consider his commission as a naval officer a badge of degradation, for he could not take command of a ship in the naval service without it." What I have been reading was part of his address to the meeting at Sunderland; and he goes on to say:—"As discharges from ships were intended to operate in conjunction with tickets for the advantage of well-conducted seamen, an improvement in their capability had been made in the late Act, which had now come into operation. Formerly no allusion to character was made on discharges; but while that arrangement had the effect of not prejudicing the interests of a seaman whose character might be objectionable, it deprived good seamen of a benefit to which they were justly entitled." Continuous discharges cannot well be worked without a register system such as ours; but we think that, in order to simplify it, the discharge itself must be the register ticket.

## TENTH DAY.

Friday, 19th January, 1900.

PRESENT:

Mr. W. J. HOWELL (in the Chair).

Captain A. J. G. CHALMERS.

Mr. J. CLARK-HALL.

[Mr. C. HIPWOOD, *Secretary*.

Mr. G. A. LAWS, recalled; and further Examined.

19 Jan. 1900. 2220. (Mr. Howell.) I understand from your evidence that you think that the adoption of continuous discharge certificates for seamen would be an improvement, at any rate in principle, upon the present system?—Our ship-owners are certain of that.

2221. Will you please quite briefly give us the reasons that you have for that conclusion?—The reasons are those which I stated on the last occasion, that you will limit the number of discharges to one for each seaman, and therefore the crimp and the fabricator of discharges will have much fewer documents to get hold of, and to put into the hands of men who are not seamen—there will be one man, one discharge. The number of discharges will be equal to the number of seamen.

2222. Do you think that the form adopted should be the only one approved for the purpose by the Board of Trade under the Merchant Shipping Act, and that it should be somewhat on the lines of the form used for the Naval Reserve, and copied by the Shipping Federation?—I do. That is quite our opinion.

2223. You referred to some evidence with regard to the old register ticket given before a Committee in 1852, by Captain Beechey, of the Board of Trade?—Yes.

2224. And you are no doubt aware that the present certificates of discharge were introduced to take the place of the old register tickets, without which no seaman could be legally shipped?—Yes, I think so.

2225. You know that when the Navigation Laws were finally repealed the register ticket fell to the ground, chiefly because it was no longer necessary for the purpose

of proving a seaman's nationality or identity?—Well, it was after that. I held a register ticket until 1854 or 1855. I can produce it if you like.

2226. But it was chiefly because it was no longer necessary for the purpose of proving the seaman's nationality or identity that the register ticket was given up?—I suppose that would be the reason, but I never knew the exact reason. We were told that it was objection on the part of the men themselves, but I never remember that objection myself.

2227. Are you aware that the substitution of the present system of discharges for the register ticket introduced an important change in principle, for no master could take a seaman to sea without a register ticket, while there is nothing in the present law to prevent a master engaging and taking a man to sea who cannot produce any certificate or discharge whatever?—Oh, yes, that is so, of course.

2228. That is why I wanted to call your special attention to that?—Yes, that is a very strong reason.

2229. No doubt it is within your knowledge that for some 25 or 30 years there has been a demand for the adoption of a system of continuous discharge certificates for seamen, and that such a system was recommended by the Royal Commission on Loss of Life at Sea, and also (in connection with a system of rating) by Sir Edward Reed's Manning Committee?—Yes, that is so.

2230. And you know that several attempts have been made to meet this demand without legislation, which I explained in detail to the Manning Committee (of which

you were a member) when I gave evidence before it?—I remember that perfectly.

2231. Of the experiments I described, one was really a continuous discharge, pure and simple, but it was, of course, not compulsory, and has been very little used comparatively?—I may say in reply that it was absolutely unknown to the shipowners until it was put before Sir Edward Reed's Committee. We were ignorant that the form existed.

2232. In the evidence you gave on the last occasion you quoted to us some evidence with regard to the old register ticket given by Captain Beechey of the Board of Trade in 1852. Now, I should like to call your attention to some remarks on the subject of continuous discharges made by my predecessor, Mr. Thomas Gray, in 1886. He said in a memorandum, which he issued:—"It is obviously to the convenience of everybody concerned, except, perhaps, some seamen, that the records of a man's services should be continuous, and should be kept together for reference. It would be a convenience to masters when engaging men, and to the superintendents of Mercantile Marine offices almost always, if men appearing before them, or making applications to them, possessed such a record, but it is quite useless to expect it, unless some stringent laws as to rating and manning, and against personation, are passed; and even then—as in the case of the old register ticket, it would probably be a failure." Do you agree in that view, and do you think it holds good at the present day?—I only agree partly. I say the result of the present system is this (and Mr. Gray overlooked this), that the good seamen are anxious to have a continuous discharge for a record of their good character. It is only the bad seamen who are not anxious about it, and Mr. Gray, I submit, overlooked that factor in the case; and there are a very large number—we believe something like 50,000 seamen in the country of good character.

2233. Do you think there is a stronger demand for a continuous discharge now than there was then?—I am not prepared to say that. I believe those of loose character will resent it, and they are stronger now to resent it than at any time.

2234. You say it is popular with good seamen, and with owners generally?—It is absolutely a matter of justice to enable the good seaman to put himself on a higher level. At present they are being submerged with the lowest.

2235. I gather from your reply to Question 2194 in your evidence, that you are in favour of distinctive ratings being conferred by way of inducement after certain periods of service, namely, A.B. after three years' service, first-class A.B. after one year's good service as A.B., and higher official ratings for petty officers, dependent upon clean records. Is that so?—That is quite our opinion.

2236. But that would require legislation, would it not?—Well, sir, I was very strongly inclined to think it would not, for the reasons that I gave, but, of course, your question implies that you think otherwise, and I cannot say that it would not, looking again at the thing. I think that a system might be devised, as the Board of Trade has the power to make certificates. Therefore, so far as the good seamen are concerned who are willing to receive those certificates—you are absolutely in command of the position. You could not force official ratings upon the bad seamen, that would require legislation, and if they like to be bad we do not want to press them.

2237. You know the Board of Trade has been advised that at present there is nothing in the law to prevent masters from shipping men as A.B.'s who are not entitled to that rating?—That is so.

2238. But it will be within your knowledge that there are men shipped as A.B.'s who have not had three years' sea service, or anything like it?—Yes, but not through our system. We make every seaman prove four years' service, or else we do not give him an A.B. rating.

2239. I am aware that that is so with regard to the federation ships; but there is nothing in the law to prevent it?—Nothing.

2240. If no man could be entered on the articles as an A.B. who could not prove his title to that rating, would not masters shrink from going to sea with a crew which did not contain a proper complement of A.B.'s?—Well, sir, if you want the actual facts, they are nearly all A.B.'s now. Our trouble is that they do not take sufficient ordinary seamen, and boys to make seamen. They have reduced crews to what they consider the effective number for working the ship, and they have those of the best quality, they have more A.B.'s.

2315.

2241. Would not seamen be very careful to preserve their discharges if they could not obtain in their proper rating employment without them?—I may say they would; that is the effect of our system.

2242. I understand one of the main objects of the Shipping Federation in spending £10,500 a year in registration, benefits, etc., is to encourage steady seamen, and to secure to the Federation the services of a sufficient number of qualified men?—That is absolutely the sole object. I thought we would get the best men.

2243. I think you told us that the Federation decline to employ any seaman unless he has one or other of the two forms of certificate you described?—That is so.

2244. Am I right in thinking that the Federation do not, except in very exceptional cases, issue either a paper ticket or a parchment certificate to an A.B., unless he is able to produce a proof of the four years' sea service required by the Merchant Shipping Act 1894?—That is so with regard to deck hands. With regard to the engine-room hands, the engineer brings a man into the office, and says, "This is good material for a trimmer," then he gets a ticket or permit.

2245. Those we might regard as the exceptional cases?—Yes.

2246. With regard to foreigners, I understand that in the case of the parchment certificate they must have proof of four years' actual service in British ships?—That is so.

2247. In the case of the paper ticket the man has, I believe, to be able to show that he understands English?—Yes, absolutely. Of course, do not misunderstand me, the Registrar only asks a few questions, and if a man answers freely he gets the permit.

2248. It is a rough test as to whether he understands sufficient English for the purpose. You do not profess to require an examination in English?—No; but on the other hand we seldom take them unless the officer or the engineer brings them up, and vouches for them.

2249. You do your best to satisfy yourself that he speaks English and understands orders?—That is so.

2250. Your proposal to rate an ordinary seaman or a boy as A.B. after three years' service would require legislation, would it not?—I am afraid it would.

2251. Would you offer any inducement by way of rating to firemen and trimmers?—Just the same—more, if possible. If we could have distinctive rating of fireman, leading fireman, and greaser, the men would have inducements for behaving properly.

2252. So that it follows that with regard to the Federation ships (which, as you have told us, include about nine-tenths of our sea-going vessels), the men engaged are actually required not only to show that they understand English, but, in the case of A.B.'s, to prove the sea service required by the Merchant Shipping Act?—That is absolutely so, notwithstanding anything said to the contrary.

2253. Would you be prepared to affirm a similar principle of compulsion with regard to the official discharges if a system of continuous certificates were adopted?—I am not prepared for compulsion at all.

2254. But you have it in your own case in the Federation?—But you see it is only compulsion to this extent, that we give preference to those who have documents, but we do not prevent a man earning his living with a paper ticket, or permit.

2255. The question I have put to you is that you really do apply the principle of compulsion because you will not take those people without one or other of those documents issued by the Federation which shows the sea service required by the Act, except in exceptional cases?—Yes.

2256. That is adopting the principle of compulsion except in exceptional cases. The simple question I put to you is this: Are you prepared, or are you not prepared to affirm a similar principle of compulsion with regard to the official discharges if a system of continuous certificates were adopted. To say that a man shall not go to sea except in some very exceptional case specially provided for, is surely compulsion?—I cannot say that. That is quite a different thing, we may be stopping the natural supply of seamen.

2257. Please do not think that I am arguing the point with you. I simply want to get your opinion, and I understand you think that no principle of compulsion should be introduced?—I think no principle of compulsion should be introduced so far as the official certificate of

Mr. G. A.  
Larcs.

19 Jan. 1900.

Mr. G. A.  
Lowe.

19 Jan. 1900.

efficiency is concerned. We believe that there should be compulsion so far as continuous discharges are concerned, that a man should not have a dozen discharges in the year, but only one for a life-time.

2258. I quite understand your argument; but you still think that a shipowner or a master should take a man if he chooses who has no certificate of discharge at all?—I would rather throw it upon the master than the shipowner to decide.

2259. You think that the master should have the same full liberty to choose a man, whether he is certified or not?—Certainly. My feeling as a master is that I would not endanger a ship that I was going in myself, and therefore I would only take those who would make good seamen.

2260. That is the answer to my question, that there should not be any principle of compulsion introduced in the matter with regard to the certificates?—That is our opinion.

2261. It would rest entirely with the Federation or master of the ship whether the statutory enactment that a man shall not be entitled to a certain rating without proving certain service is of any real effect or not?—What I tried to point out is that we are absolutely loyal in enforcing the Merchant Shipping Act (the section is not in my head at the moment) without ourselves approving of it. A man may be an able seaman with very much less than the four years' service.

2262. There is very little doubt about that; in fact, there is a consensus of opinion about it?—Especially for steamers. There is no reason that a smart lad should not be able to steer, sound, and keep a lookout even after twelve months' service.

2263. The section you were referring to is 126, under which a seaman shall not be entitled to the rating of A.B., unless he has been four years before the mast?—That is so.

2264. What is the view of the Federation with regard to the meaning and effect of that section?—We say the law means that he is not entitled to demand, but that if the master finds that he is in fact an able seaman, although serving, say, in his third year or second year, the master has the right to give him an A.B. discharge, but the seamen cannot legally demand it.

2265. That being so, the Statute saying that a man shall not be entitled to the rating of A.B. unless he can prove certain service at sea, do you think that the superintendent should be able to put him on the Articles as A.B. when the Statute says no?—Yes; if the master has rated him as such, and he being the proper person to rate or dis-rate an able seaman, then I think he should be allowed.

2266. You think that the superintendent may properly put them on the Articles as A.B., although the Act says they are not entitled to that rating?—Yes, there is no disabling section. There is a special disabling section that he may not make an improper report of character.

2267. You know the view of the Board of Trade that the superintendent has no power to prevent him going as an A.B. if the master chooses to rate him as an A.B.?—I knew that was the practice.

2268. Is it right that if an Act of Parliament says he is not to be entitled to a certain thing without showing certain service or services he ought to be on the Articles in that capacity?—I think it right that the master, as the only man who knows, should have this power. The superintendent of the Mercantile Marine has no knowledge as to how he has done his work during the voyage.

2269. The Act says that a man is not entitled to a certain rating without certain services. Is it right that the superintendent should put him down as an A.B. when the Act says he shall not be entitled to that rating?—What the section means is that he is not entitled to demand it. The section says a man shall not be entitled to rating as an A.B. without four years' sea service. It is clear that section contemplates a seaman coming up after four years, and if he says, "I have been four years at sea, I am entitled to this A.B. rating," it must be given to him.

2270. Certainly?—Very well, he could not demand it at three years, for instance, but if the master gives him the rating of A.B. at three years then no one should interfere, as far as I can see. If you had a law which said you must take only able seamen, or a certain number of able seamen, in each ship, then, yes, it would be rather different.

2271. It is rather analogous to the rule of the Board of Trade with regard to officers that the mate shall

not be entitled to a certificate without a certain service at sea, and the master shall not be entitled to a certificate unless he has had a certain service as mate?—But you are much more lenient, or were in my time. Why, you could be a second mate at seventeen and have been only three or four years at sea, so that men in another year got into a higher grade, and in another year a higher grade still. That was extremely lenient, we always thought.

2272. It has been stated to this Committee that men who know absolutely nothing of the sea are often shipped in different capacities, and that perhaps after one voyage they are discharged with V.G. certificates as A.B.'s, firemen, cooks, and so on, although they are really absolutely unfit and incompetent for such ratings. What do you say to that?—I do not think that is true of the foreign trade. It may possibly be quite true of the home trade short voyages, although we have no knowledge of it; but I do not think that considering the small number of men that are now taken in vessels, any master, for his own sake, would do that. Of course he won't have his ship stopped—he may run considerable risk, and take what men are obtainable.

2273. You do not think that that prevails to any considerable extent?—I am sure it does not.

2274. Although isolated cases occur?—They will always occur.

2275. It has been also suggested to us that certain classes of seamen, for example, boatswains, carpenters, cooks, A.B.'s, etc., should be required to hold Board of Trade certificates much in the same way as masters, mates, and engineers, are required to hold them now. Does that proposal commend itself to you?—I do not think that any certificates, except on the face of the continuous discharge, would be of service to seamen, unless put under the same restrictions as for the certificate of the officer, that he is to lose it for default, or even for drunkenness. If you do that they won't have certificates very long in many cases.

2276. The subject, as you know, was considered and reported upon by the Royal Commission on Loss of Life at Sea?—Yes, I disagreed with the report entirely.

2277. And, in one particular, by the Royal Commission on Labour?—Yes, the reports were against certificates; it was so on the Manning Committee. The Manning Committee thought the certificate should be only in the form of continuous discharge.

2278. I had better read the paragraph from the report of the Royal Commission on Loss of Life at Sea: "With respect to the rating of 'able seamen' it is now the law that no man is entitled to be so rated unless he can prove four years' service at sea before the mast; there is, however, great laxity in this respect. Men are constantly rated as A.B. without any inquiry as to their past services, and with insufficient qualification; practically it rests with the masters of vessels whether to rate them as such or not. Nor does it appear to us that there is any certain method by which this can be prevented. We think, however, that a voluntary system of examination might with advantage be established, by which through Local Marine Boards, and after a single examination in practical seamanship, men might obtain certificates as able seamen. We are also of opinion that a system of examination and certificates, which now applies only to the cases of masters and officers, might with advantage be extended to boatswains and carpenters, the examination in this case being of a character suited to the duties of these classes." And in the summary of the recommendations of that report, Paragraph 24 says, "That a simple professional examination should be required for the rating of boatswains and carpenters." Those are the recommendations of the Royal Commission on Loss of Life at Sea.—That voluntary examination had gone out of my mind; but the thing still remains, on what are you going to examine the boatswain of a steamer? Now, he only trims the lamps, and looks after deck work in the daytime.

2279. In fact you think the conditions are very materially altered since the report of the Commission in 1887?—That is quite true.

2280. In reply to one question—2212—you expressed the opinion that more or less trivial offences should not be recorded on discharges. Do you think that a seaman would accept a discharge on which a serious offence such as mutiny is recorded? Would he not rather trust to chance or to his seamanlike appearance to be taken on by some officer in search of a crew?—I think he would request that the offence should not be recorded. But you must not leave a blank space for "V. G." to be inserted by the man himself.

2281. And you suggested to the Committee that Section

129 of the Merchant Shipping Act should be more rigidly enforced. Will you suggest in what way you think that should be done?—Yes, I think that the superintendents and the ship masters should keep before their eyes Section 130, and I say they often evade it. I take it out of the mouths of masters themselves—they keep the “V. G.” column vacant till the end of the voyage, and although the man is logged and should have “D.” they give him “V. G.,” with the consent of the Mercantile Marine official. I say that the Mercantile Marine official, if he finds in the log a notification of bad character certified by others of the crew, should say, “Captain, I decline to let you give “V. G.” to this man, although you are willing to forgive him his offence for the sake of peace; it is against the law, and I will not let you do it.” Section 130 is very strong about it.

2282. I should like to have a suggestion from you as to the way in which you think that the section could be more rigidly enforced?—If I had a log-book I could show you.

2283. (*Captain Chalmers.*) Just one question: Did you in your answer just now say that you found in fact that the masters did keep the column for report of character vacant?—I have been told so.

2284. Till they take it to the Shipping Office?—Yes.

2285. They do not fill it up on board the ship?—Not in all cases. I cannot say that I went as far as to verify that, but what they told me was, that notwithstanding the man was logged for grievous offences, they kept the column vacant where the “V. G.” or “D.” appears.

2286. Is not that done with this purpose, that should the man's conduct be such during the rest of the voyage as to condone for a previous offence, the master shall not be deprived of the chance of showing mercy?—Undoubtedly that is so, but it is against the law. It should be the duty of the superintendent to say, “No, you dare not make a false report of character; this man's character is logged, you brought a charge, and you must proceed before the Court. I am the Court, and it is for me to say whether it shall be ‘V. G.’ or ‘D.’”

2287. Is it not open to the master to make as many entries in the log-book as he wishes, and therefore to make a condonation entry?—I do not say that the entry must be of offences only and nothing else. I do not remember ever to have seen any log of meritorious services or anything of that kind, to cancel an offence.

2288. Not meritorious services, but if a man has been logged for an offence and the entry has been read over to him, and he makes a certain reply, then towards the end of the voyage the master makes another entry in reference to the previous one which is an offence—both entries are dealing with the offence, mark you—as one records, the other condones it, and are you going to shut that out?—I have never seen it.

2289. You have never seen the condonation entry on made one yourself?—Never.

2290. (*Mr. Clark Hall.*) And they do occur not infrequently?—It is not within my knowledge at all.

2291. (*Captain Chalmers.*) Do I gather from you that you are against the master having that right? How can you take the right away from him, unless you legislate?—I would like to explain: I do not know whether this is the same log-book, but I brought you last time a certain class of entries. I say you cannot condone the offence when a man came on to the bridge, assaulted the pilot, and endangered the vessel. It is all very well for the master to say, “I do not want to have this, that, or the other—I will forgive him”; but the public won't. It is an offence not against the master but against the law, and he has no right to condone it.

2292. Is not the strict significance of the word conduct not what a man may do under a temporary aberration owing to drink, or possibly some other cause; but does not the word strictly apply to his conduct in general during the whole of the voyage? Is it to apply to one temporary aberration when he does commit himself and very likely assaults the master—(this temporary aberration exists probably two or three hours or twelve hours, whereas during the seventy or eighty days of the voyage the man's conduct has been fairly good) or how is the master to construe the word conduct?—He should construe it in this way: if it is simply the offence of being insolent, or perverse, he may forgive those things; but putting the navigation of the ship in danger, that is a public offence, which the master has no right to condone. Otherwise you will have men doing what they like when they do not fear punishment. You will encourage a bad class of seamen, through want of a little firmness in applying the law.

2293. Is firmness required by the master or the superintendent?—I think it is most unfair to put the onus upon the master for the reasons I gave. There are some masters physically incapable of taking their own part, as may be required; but the superintendent sitting in an official capacity will command respect.

2294. (*Mr. Clark Hall.*) If you do not allow a man to put any condoning entry would the weak-minded master put the incriminating entry?—I think so, because in the case I brought before the Board of Trade the officers and engineers went to the master and insisted upon the law being enforced. They said, “We will not go in the ship if you do not.” That in itself makes it secure. Those are public offences, but there may be trivial offences, when the master may say, “I will forgive this man if I like for his offence against me.”

2295. (*Mr. Howell.*) I think I understand your position to be that on certain evidence, by entries in the official log, the superintendent should take up the position of a quasi judge, and decide whether a man is to have a good or bad discharge?—I say that he has to take the responsibility of giving a very bad man a very good discharge—that is a serious responsibility.

2296. You mean that he is to take the evidence which he obtains from the entries in the log and settle as a judge what the effect of that is?—As a magistrate, yes.

2297-8. In reply to one question with regard to desertion, you made a suggestion, which I confess rather startled me: do you really think compulsory Royal Naval service a suitable punishment for deserters from the Mercantile Marine?—I do not want to carry it to my own opinion, but I may say that in the French service it has been found most efficient.

2299. Are you aware that boys are not accepted for the Royal Navy from reformatory ships or schools, though they may have been sent to such ships or schools simply for wandering, being without visible means of subsistence, and so on?—Yes.

2300. Do you still think that this suggestion is feasible or one that would tend to popularise service in the Royal Navy?—No, but that is a different thing; we have to pay for the Navy; and you have as much right to make them do this, as to hold a Naval Court, or to call for the assistance of a warship to take refractory men out of your own ships and to punish them; that is the proper sort of punishment. I look upon imprisonment as the worst form of punishment that can be adopted. Where we want the seamen and want to improve them, a prison is not the place, especially foreign prisons. In the warship it is like a penal settlement, and you put the man on board and make him serve a certain time. Probably the captain of the warship will not be pleased, but he is a public man, and must perform a public duty. I have always said, “For Heaven's sake, do not take any of our merchant seamen for the Navy, do not rely upon them; raise your own men.” Our present seamen are certainly in many cases bad to the core. Yes, they are; they have been undermined by union doctrines to the extent of disloyalty. Anyone who chooses to read their paper can see where they are urged not to offer their services under Naval discipline.

2301. Then you still adhere to your opinion that compulsory Royal Naval service should be inflicted as a punishment for deserters from the Mercantile Marine?—Yes, rather than imprisonment, I would put a man on board a Naval ship at the port or place where it happens to be, and let him have a term the same as the French have. The French do not use those men for the navy; they are the men whom they avoid using; they simply keep them there as a punishment for three months, or six months' service at a reduced rate of pay.

2302. Then, it is not compulsory service in the navy, but imprisonment on a Queen's ship that you advocate, is it not?—Not imprisonment, I want to get rid of the imprisonment. It would be imprisonment only in the sense that all service in a ship is imprisonment where the man does not go ashore without the leave of the master; but he would not be a prisoner in the sense of a seaman of the navy who is on the black list, and who might have to do shot drill. I suggest that he is to be there to learn what discipline means; it is only with that view that I advocate it, as a deterrent punishment.

2303. Well, let us pass on to another question. I think you expressed an opinion in favour of a continuous record for a lifetime on a single document. Do you think that would be possible in all cases, for instance, in the case of frequent short voyages or engagements?—Yes; with a little trouble I think it is possible. You fill up one of your books—say in five years; then the seaman will

*Mr. G. A. Laws.*  
—  
19 Jan. 1900.

Mr. G. A.  
Laros.  
19 Jan. 1900.

apply, and for sixpence will get another book, and on the first line of another book there will be five years' service, and you refer to previous book, and then start again—only one document all the time.

2304. And you think that the continuous discharge should provide for the endorsement on it of a report as to the seaman's character and qualifications, as contemplated by the 129th Section of the Act of 1894?—I think so.

2305. You also think that superintendents should settle disputes about character, and see that the truth is always recorded?—Yes, in order that no master, for reasons of his own, shall give a bad character to a good man; only to that extent, and, *vice versa*, that the superintendent is to take the responsibility of giving a good character to a man who by the log book is deserving of punishment.

2306. I think I gather from your answers that you are aware that the seaman may decline to have the certificates of discharge and character combined?—Oh, yes; but do not leave a blank, but put in D., or a stroke.

2307. If the superintendent is not justified in recording the report of character on the discharge certificate without the consent of the seaman, are you justified in doing so on the Federation document, as I think you have suggested to us?—Oh, yes, because that is with the seaman's consent. We do nothing against the seaman's consent as far as that goes. You see they use the document, and there is merely a column for "ability."

2308. As I understand, your advocacy of a system of continuous discharges is more or less dependent upon certain changes being made as to rating, the decision by superintendents of certain questions of character, and the punishment of desertion, all of which, as I have pointed out, would require legislation?—If you say it requires legislation, I am not prepared to press anything; but I think one has a right to say that without you do give inducements, you will not get improvement on the present lax system. Excuse me for saying lax system, because as it is, there is a neglect to give the true character of the seaman required under the Act, under certain circumstances.

2309. I think your experience will have enabled you to judge that the introduction of a system of continuous discharges even in the limited manner possible under the existing law, would be a costly business. In addition to that, would it not be of somewhat doubtful efficacy, without legislative changes, such, for instance, as those you have indicated?—I think that the law is strong enough at present to enable you to start it. Then, as the great benefits would become manifest, you could, if necessary, get an extension of the law where it was found to be required for certain things.

2310. I should just like for one moment to leave legislation out of the question, and to consider whether what could be done under the existing law would be likely to meet your views. What could be done without legislation is to supersede the present single-sheet certificate by a continuous certificate of discharge, leaving the seaman clearly the option whether he will have any record of character at all, or whether he will have it endorsed on the certificate or written upon a separate sheet. That would be costly, and not, after all, a very great change; and I ask you whether you think it is worth while to disturb the present state of things for the sake of so small a change?—I think it is worth £50,000 of the country's money to introduce a continuous system of discharge which will leave every seaman in the United Kingdom with only one document, and with the choice and chance of having his good service recorded either by your own officer or even by the Registrar General. But I submit that the Mercantile Marine superintendent should have the authority of a magistrate sufficient to decide that without referring to another department.

2311. Now, I will hand to you the continuous certificate of discharge that has been already provided by the Board of Trade, and I shall be glad to have your opinion about it. You told us it is scarcely known by shipowners or masters (*handing a certificate to the witness*)?—You may take it that nine-tenths of the shipowners do not know that this exists. I did not myself know, although for a long time I had been in an official capacity to make it my duty to know, and although Mr. Thomas Gray and I were personal friends, I did not know that it existed. He showed me discharges made up in a sort of cover, but not this.

2312. Do you think that form of continuous discharge or a similar form would meet your view if made the only form under the statute?—Yes, if this was made com-

pulsory instead of voluntary, I think it would do <sup>what</sup> everyone requires, but we should prefer the Naval Reserve <sup>form</sup> if it could be adopted without great expense.

2313. Do you think that a fair experiment could be made as to the efficacy of continuous discharges if we made the continuous certificate the only form?—Yes.

2314. You do not mean by compulsion that every seaman must have one before shipping, but that if a seaman takes a certificate of discharge it must be in this form?—Yes, because these men would get the preference.

2315. (*Mr. Clark Hall.*) You stated that good seamen will appreciate continuous discharges?—Yes, that is the result of our experience from our own system.

2316. To what cause do you attribute the good seamen not having already accepted it?—They do not know of it; it has not been before the Mercantile Marine.

2317. The continuous discharge, of course, would be a very valuable document?—We think so.

2318. From your experience of your benefit books, do you find that many of them are stolen and lost?—There are none of them stolen, but a few are burnt, and a great number are lost—a large percentage are lost.

2319. Then is there not a danger that, the documents being so valuable, crimps will get hold of them and supply them to wrongful owners?—No, I tried to show that it will have the very opposite effect. The crimps now have got a dozen documents, any one of which might serve a man's purpose.

2320. That is so, but surely a great number of discharges takes away from the value of any particular discharge. When you have a book with a complete record it is extremely valuable?—It becomes invaluable to the man.

2321. And if it is stolen from him he could come to me and get another document?—He can do so.

2322. The old one is put to a bad use by someone who has stolen it?—I do not think it can be. We have not found in the case of our own books that it can be done. We found in a few cases that they have been able to get duplicate books; that is, in one district they have got a book which gave them the death allowance, and in another district a book with personal injury. It was not done by the seamen, but by shipmasters. No seamen has done that. We have, I am sorry to say, several cases recorded where the masters have done that in order to get double allowance. Now we have put an end to that by doubling the allowance in each case.

2323. (*Captain Chalmers.*) In your examination-in-chief you said in answer to a question that your Federation desired the Board's officers to supervise the entry for conduct in the benefit book, and without they did that the entry of conduct would never be entered?—No, it has any been entered.

2324. But why should our official stamp be required for the character for conduct, and not for the character for ability? What I mean to say is, you give the character for ability in the book without anything as to conduct?—Yes, unless forfeited or suspended.

2325. Why not give the character for conduct also?—As to conduct, that is a different thing. Your officer is entitled to look at the log book to see whether the character is good or bad. He can make a voluntary entry in these continuous discharges of the Federation. You may make a voluntary entrance that this man has according to the log behaved badly. But we take away the power from the master because we do not trust all the masters. There were some who sent in most frivolous reasons, and said that a man was a deserter when he was not, and we find it impossible to put it into the hands of some masters.

2326. But do not the entries in a Federation benefit book treat as well of the ability of a man as of his conduct?—They do.

2327. Then why should you stick at not recording the one when you record the other, when both are given on the same authority?—Simply you could not make a superintendent the judge of a man's ability when he knew nothing about it. The master is the only man who could do that. We only want to leave the question of character to the Mercantile Marine official.

2328. The character for conduct?—Yes, because he has the whole document, and the whole crew; and if he had any magisterial function he would say "Now, Mr. Mate, what have you to say about this; is this a proper entry?" and he might call any other of the crew in to give evidence. It is an immediate court, with the whole voyage witnesses present.

2329. But in entering these particulars into the benefit book the character for ability and conduct, if entered, is taken from the official certificate of discharge?—Well, possibly.

2330. If it is taken from the official discharge does not the signature of the superintendent cover both the certificate as to conduct and ability?—Yes, to a certain extent.

2331. My point is this: If you take this from the official discharge, and have the signature of the superintendent and the stamp of the Mercantile Marine office, why is it necessary to have an additional stamp and an additional signature in your own benefit book?—Because we have nothing official in our benefit book now.

2332. You take the character for ability from the discharge, because you see the signature of the superintendent, and the official stamp?—Yes.

2333. Is not that a sufficient imprimatur to put the character for conduct as well?—No, because the conduct is voluntary for one and not for the other. Ours is compulsory. If we can get your superintendent to certify by his stamp that there has been such an entry in the log book, that should appear in the pages of our book, that man would lose his book, or it would be suspended. We should be able to effect the punishment which we think would bring about the remedy.

2334. If the character for conduct on the discharge is V.G., you do record that in the benefit book?—No, we only record meritorious services.

2335. You do not put the conduct?—Neither good nor bad, but for saving life we do, making the record absolute for life.

2336. Do I understand that at present no character for conduct is entered in the benefit book?—Not without stamping by your official, and your officials have stamped none.

2337. They have not stamped the discharge?—No.

2338. But they do; they stamp it, and sign it?—You mean the official one; but not in our book.

2339. That is my point. Why should the superintendent be called upon to do the thing twice? You have already his stamped signature?—The whole tenor of my evidence has been to show you that the official discharge is not always the true record of character during the voyage. I take that on the word of the masters themselves.

2340. Then with regard to your paper tickets, is there a register kept of them?—Yes, I should perhaps describe it. There is a register kept in this way: There is a monthly return sent to me of every man shipped through our system, so many paper tickets, so many parchment tickets, and so many books. If Mr. Hipwood could give me the books I could show you the document out of which that return is made—the monthly return. Of course the B3 would really show what has been done in that way. That document has been going for nine years, and there is every paper and parchment ticket entered.

2341. This book gives you the gross number?—Yes.

2342. And so far you register the number. Do you register them as having a certain numbered ticket, and as having been delivered to a certain individual?—No.

2343. Then it is not a complete register?—No, we say that.

2344. You cannot keep a register of the paper tickets?—We could, but it is not worth while, the men change.

2345. You keep a register of the gross number issued, and in what district, but not to individualise them?—Quite so.

2346. Supposing they lost your paper ticket, do you renew it without any charge?—Yes.

2347. Can you say what number of parchment and benefit books are at present in issue?—Yes, I have given you from the date that you first gave, and I found that the figures were 70,000 benefit books and 180,000 tickets.

2348. That includes both parchment and the other 70,000 benefit books?—Yes.

2349. And with 70,000 benefit books in issue what do you estimate that your registry system costs annually?—Do you mean the payment of the allowances?

2350. No, no; I just mean keeping the register of the benefit books?—From £8,000 to £10,000 a year; but that is because we are unable to separate it for certain purposes from the register system. If we had no registry system it would cost the full amount for the benefit system.

2351. Then you said that book forms of certificates of continuous discharge would be the best. But would it be of any use unless a perfect system of duplicate register was kept?—It would have to be a little more perfect than our system.

2352. And consequently more costly?—No, having seen the Registrar-General's system I should think that there is the nucleus of everything that you require. It is merely to extend the R.N.R. system to more men.

2353. Further, in the absence of any statutory obligation on the seaman to produce the book on signing articles, do you think that the system would be of value?—In the absence of an obligation?

2354. Yes, there is no statutory obligation at present on the seaman when he presents himself, or on the master, to let the superintendent see the man's papers; nor is there any obligation to produce the paper, and in the absence of any obligation, statutory or otherwise, do you think that the system would be of value?—I do, because the seaman himself believes that there is an obligation. The first thing when he applies for employment is to hand you his bundle of discharges, whether false or true. He does not think that he can be taken without them. I am talking of the majority of seamen.

2355. Is it not the fact sometimes that the chief officer chooses his men before going to the shipping office at all, and looks over the papers; or in the case of men without papers, overlooks those details and does not require the papers. He sets his mind upon a certain man, and he takes him?—After he has seen his papers and our ticket.

2356. Is it a fact that at the counter no certificates are produced?—No, that is done before. When he comes to the office he hands in the official discharges, and they are kept by the officer during the voyage.

2357. In the absence of any obligation to produce the book on signing articles to the superintendent, do you think that the system would be of any value?—I think that the system has enormous value now, and that the value would be trebled with one document only.

2358. Would it not be possible in the present state of the law for a man to hold two books?—I think not. I cannot see, having regard to our own system, how he is to do it. We have those few cases I have named to you; the seamen have not been clever enough to do it, but, unfortunately, some of the masters have done it.

2359. I put to you a case of this sort: Supposing a man—we have such cases every day in Glasgow and Cardiff—presents himself to sign articles of agreement outside a shipping office; he produces his book to the mate, and on the mate seeing it the man goes in and signs articles. He never joins that ship. Two or three days after he hopes to sign articles on another ship; he won't produce his book this time for fear of detection; he keeps it, and he tells the mate he has no book, no official discharge. He signs in that ship. The one ship goes to San Francisco and the other ship goes to Melbourne, and there is no possible means of overtaking this man. When he has made the voyage in the ship that he actually sails in—the second ship—he gets a book, whereas he has his original book in his pocket?—No, we deal with that. We say, "You have not got a discharge or Federation ticket; then, go to the Registrar-General's and get your discharge. Even if we had to tell the man to pay the 6d. he had to go and get a duplicate."

2360. Where the shipowner or master takes the trouble and takes the case up that would do; there is no official compulsion; but you as a Federation use compulsion, as it were, upon the members of your Federation to do this. Now, I am talking about the usual outsiders who simply come to the shipping office and sign articles with no one to look after them, and they can take men with or without discharges. Would it not be possible in those ships not belonging to the Federation to hold two books, or even three books?—Not if the superintendent did his duty. The superintendent should see that he has shipped as A.B., and he will ask, What have you got to show for your four years' service?

2361. But the superintendent has no power?—He has perfect power, because he has the Act at his back. He can say, "You are claiming to ship as an A.B.; if you claim as an ordinary seaman I can say nothing, but if you claim as an A.B. I want to know whether you have four years' service."

2362. But if the master and the chief officer are agreeable to take the man?—If I was superintendent I should say, "Take him as an ordinary seaman."

2363. But did not you tell us that your reading of that

Mr. G. L.  
Laws.

Jan. 1900.

Mr. G. A  
Lowe.

19 Jan. 1900.

clause of the Act was that the man could ship as A.B. if the master was willing, but that he was not entitled to demand it as a right?—I do; the master may give A.B. ratings.

2364. Is it right for the superintendent to step in?—Yes, because he has the Statute at his back; he says, "This man wants to be shipped as an A.B."

2365. And the master says, "Yes, and I know him as an A.B."?—Then the superintendent would have the right to have proved to him that the man was an A.B. in accordance with the Merchant Shipping Act. I am saying how it could be worked.

2366. Supposing the superintendent attempts to block the way, the master says, "I am going to ship him as a deck hand"; the superintendent would say, "All right, do so." But during the voyage there is nothing to prevent his rating this man as an A.B. and paying him off as an A.B.?—Nothing whatever, as far as wages are concerned; but your official can make such inquiries as will enable him to see the book discharge.

2367. You know the officials of the shipping office have no right to demand the production of entries, and have to put in "N.P." (not proved) opposite his name?—Yes, when that man comes to our office he has to go and spend 6d. at Mr. Clark Hall's office.

2368. Under your system it would not be possible, but under the ordinary system would it not be possible to hold two or three books?—It is always possible, but with a little firmness on the part of the official it would be quite exceptional that it could happen.

2369. But does not that take away the virtue from the point that you made—which would be a very good one if it were possible—limiting the number of discharges to the actual number of seamen—one for each seaman?—I am unable to see how a seaman is going to keep two books if the system was properly carried out somewhat on the lines of our own system—they cannot with us.

2370. Quite so; but is it not the fact that at present without legislation the department has no power to put in force your system, that is to say, to instruct the superintendent if a man appears to sign articles without any papers, no matter whether the Master be willing or not, to send him to the Registrar-General's, where he would have to pay 6d. for his paper? Is it not within your knowledge that that is the position of the department?—Yes, but they have the power under the present Act, with that Statute behind them, to make due inquiries into the subject.

2371. I will take the exceptional cases in times of stress or in shipping substitutes at the last moment. Would the master or officers refuse to ship a man who did not produce his book?—I think there might be occasions when they would not.

2372. I am talking of shipping substitutes at the pier head, at places like Cardiff and Liverpool?—I think that there both your official and a shipmaster go by appearances.

2373. That is to say when there is a sudden demand?—Yes, rather than stop the ship passing through the lock.

2374. And that would go on with the continuous discharge the same as at present?—Yes; but the time would arrive when there was no such demand, and the men would find they could only get *bond-fide* constant employment by having their documents.

2375. We have been told by shipowners who have been here giving evidence that they would view with alarm, and more than alarm—that they would oppose any amendment of legislation which compelled the production of a paper in all circumstances before a man was shipped. Could we justly, then, proceed to legislate on lines which the owners have said they would resist to the utmost?—Yes. You have got nine-tenths of the shipowners in favour of continuous discharges, and they have authorised me, through the Council of the Federation and the Chamber of Shipping, to give evidence.

2376. Then I go further: Do you suppose the owners represented in your shipping federation would not oppose legislation which would prevent them shipping substitutes at the pier head, because they would have to have the man's papers produced before he was allowed to sign articles?—We should not oppose legislation, but we will not ask you for legislation; we will not ask you for anything that cannot be done under the existing statutes.

2377. Would you oppose legislation which compels the production of papers in all circumstances, whether shipping substitutes at the last moment, or at any

other time?—If it is to mean this: that a ship having shipped her proper crew, and the men not having joined, and that ship is proceeding through the lock to sea, and if you say that there is to be legislation that would stop that ship if the substitute could not produce a paper, then I say distinctly we should oppose it.

2378. Do you know that is exactly the evidence of the shipowners, Mr. Beazley, of Liverpool, for instance?—We cannot stop the trade of the country in such cases.

2379. The moment you make the exception to the rule, does not the evil creep in, of men not being obliged to produce their books, getting possession of two books?—The moment you begin to be firm, if you insist upon the system, and that it is to benefit the seamen, in a few years you will find that every substitute will have his book, because the crimp will know it is no use to get him down as a substitute without he has his book. Just now every substitute has a Federation ticket, because the crimp knows that he cannot get the man off without it.

2380. I want to go upon the point as to crimps. There is a certain number of men with whom the crimps work; the crimps use them as their instruments, and would not it be possible under this continuous discharge system, without fresh legislation, for the substitutes who go down to the ships, and who although they have a book know that they can often get into a ship without a book, to say to the crimp: "You can take this book and give it to someone else"?—Not with a proper book and a man's description in it. You cannot use one of our books in that way. If the officer takes the trouble to open the first page, he would say, "Show your personal marks, etc."

2381. You think that the description would make it prohibitory?—When you say prohibitory, there is always the chance that there may be men nearly alike. Speaking generally you would get into a much better state of things than exists at present.

2382. The point I wish to elucidate is this: If men can ship without a book—and there is no power to demand it—would the system be worth the attendant cost of a central registry, and consequent increase of staff and premises and all that?—I said that I think it would be worth £50,000 of the country's money to introduce a one man one discharge system in whatever may be found to be the best form.

2383. Although it may be an imperfect system?—Although it may be an imperfect system—nothing is perfect, not even your own officer's certificate system, that is not quite perfect; the same thing might be said of that.

2384. (Mr. Howell.) I should like to ask you whether there is not an essential difference between the discharge certificate and the officer's certificate. The officer's certificate must be produced, and he cannot go to sea without it?—Yes.

2385. But in the case of the continuous discharge certificates there is no such compulsion?—I admit that; but that is the only way it can be worked without fresh legislation.

2386. You are disposed now to take the view that the superintendent—I admit that this is a view which appeals to me very strongly—should not be allowed to put a man on the articles as A.B. unless he is entitled to that rating?—Yes, to verify the rating.

2387. Is that your view of the section now?—We have acted up to that, although we do not believe that the section is just. I am sure Mr. Clark Hall will tell you that when we first established this system we said unless you prove four years' service you will not get our A.B. ticket. We feel that ours is a public body, and if it could be said that we are not carrying out the statutes we should be set aside.

2388. But the point I want to bring out clearly, and it is of great importance, is that very point of the superintendent interfering to prevent a man being put on the Articles as A.B., because he cannot prove that he is entitled to the rating; and the section means, you say, that he is not allowed to ship as A.B. until he shows he is entitled to that rating?—Yes, as a means of seeing a man's qualification, if necessary.

2389. In other words, that if a man is brought forward to be put upon the articles as an A.B., he must show proof that he is entitled to this rating, or he will not be put on the Articles as A.B.?—Or show the other discharges. The man says: "I have not got them"; then you must go to Mr. Clark Hall for duplicates.

2390. Then the superintendent ought not to allow them

to be shipped?—Yes, and if that instruction was in force for twelve months the books would be produced.

2391. I think you expressed the opposite opinion?—No, except lost by accident.

2392. (Captain Chalmers.) Would not the ship owner or ship master object to the superintendent taking that position?—I think he would. The ship master, we believe as ship owners, is the best man to say whether a man is an able seaman or not. The master is in absolutely the best position; but that is not the law as you read it.

2393. If the ship owner object to it, how is the superintendent to hold his position?—He can say: "I am obeying the law"; and until we alter the law I am sure the Board of Trade would support that declaration. You support them all in doing their duty, even though they may be wrong.

2394. (Mr. Howell.) I think not. I entirely demur to such a proposition?—You do until they are proved to be wrong.

2395. (Captain Chalmers.) That system probably would work well in fair weather; but take a time of stress like that at Liverpool lately, and at Shields and other places, would the ship owner and ship master tamely submit to the superintendent dictating as to his power of making the production of papers necessary?—In time of war a great many things have to be done which are not done in time of peace. We do not legislate for war. I want to explain that in time of stress the great mail companies even take any men; they get the best men available.

2396. (Mr. Howell.) Because they pay higher wages?—Yes, in most cases.

2397. You say that the superintendent should say, Now you have brought forward this man as an A.B., but he cannot prove that he is entitled to the rating of an A.B., and therefore he cannot sign the articles as an A.B." Then the master or mate who has brought the man forward will say that he wishes to take him as an ordinary seaman instead of as an A.B. What would happen then?—But if we caught any of our masters doing that, they would be told to enable the official to do his duty for our benefit, and that this was to improve the man, by ordering that none should get preference of employment without production of a certificate.

2398. Suppose the Board of Trade adopted the view that the superintendent was not to allow a man to be rated as an A.B. unless he could show that he was entitled to it; should we have the support of the Federation?—I am sure of it, to get discharge produced.

2399. (Captain Chalmers.) Would we have the support of the companies outside the Federation?—I think so, except in the time of stress, as stated.

2400. That is where the thing comes in; it overthrows the whole system, does it not?—Their own system is even more exacting on the mailships in time of peace. But we cannot stop a transport in time of stress.

2401. Is it not a fact that the difficulties attending the shipping of seamen, and the giving of proper characters, and affecting the whole internal economy of the shipping trade are not in times of peace and fair weather, but in the time of stress, that is when you want the system to be tried; that is the time to put it on its trial, and if it is not perfect under these conditions is it worth starting the system?—Oh, yes; it is for normal times.

2402. I grant you in ordinary fair weather it will be all right?—Want of firmness in carrying out the existing law is the reason that we have probably the most mutinous and drunken firemen of any nation in the world.

2403. As to your system of inducements, could those inducements be put in force without legislation as to rating?—I think so; I have said so. I think you have the right to form a certificate of discharge for any rating, and that that would include any rating of any sort. You have therefore the right to give a certificate of this kind, a continuous discharge for a boatswain or for a leading seaman—it is not compulsory, but the man rises to take it up the same as a certificate. You know that the seaman claims that he ought to have a certificate. You are not going to issue a certificate because he asks it; you want some form of competitive examination, or some proof that he was entitled to a certificate just as here. They want a boatswain's certificate, a petty officer's certificate. You would say, "Very well, you will prove to me that you have been for so many years, and got a character for sobriety re-

corded." That would be the inducement to the men to remain sober.

2404. Then you think that those experiments could be put in force without legislation?—Yes.

2405. And if they can be they should be?—Yes.

2406. But is not it within the power of the shipowners and the shipmasters acting together in your Federation or any other Federation to do it. What I want to point out is this: Is it not impossible for the Department without legislation to institute such a system, but would it not be quite possible to support or accept such a system were it laid down by the shipowners and shipmasters?—Yes, but I hope you will put the official stamp upon it. That would make it possible without the expenditure of one farthing to yourselves; by a stroke of policy you would throw it upon the shipowner. We want good seamen; but because we could not get them with the official stamp we tried other means.

2407. The stamp on the Federation book, you mean?—Yes.

2408. But I am now talking of the official discharge. One of your inducements for their serving as able seamen for three years, with a good character, is that he should be rated as a first-class able seaman?—Yes.

2409. We will suppose that to have come about, and a shipmaster pays his crew off, and they have all got a three years' certificate of good character, and when he comes to put forward the official discharge he says, "You must put the rating down as a first-class able seaman." Do you recognise that the superintendent would not object to that, but would sign and stamp the discharge the same as if he were put down as a simple A.B.?—No, I put it on very different ground. I say that as the law is at present the superintendent ought to say, "I will not confirm an A.B. rating unless you are within the statute." We say that it is within the province of your superintendent to do that now, although we say that it is unwise on the part of the statute that it is so. We believe our masters readily give A.B. discharges to men who are not legally able seamen.

2410. Do you think that that would be adopted very long before a case arose to go before the courts?—I think that attitude would bring the men into line.

2411. I am not talking about the men, but the masters, who would resent it?—It would not be considered an interference; it would be assisting our own system. See what we have done; no shipowners have objected to seamen being sent to Mr. Clark Hall for duplicate discharges.

2412. I quite recognise that under your system it could not, and does not, happen, but I am talking about the outside shipowner?—But you put a question, Would the shipowner object? I say I do not think he would object, because my experience is that having regard to what we have done he never did object. He will think we were doing the proper thing. But there may be shipowners who object.

2413. But could those inducements be put in force without legislation?—Yes, we say that we put them in force.

2414. Would the shipping community approve of it?—I think nine-tenths of them have approved of it.

2415. Without that system of rating and in the present state of the law, is not the matter entirely in the master's hands?—Well, I suppose it is, unless your official takes a very high view of his public duties in the matter.

2416. Supposing a lad has been a two years' voyage as an ordinary seaman with a master, he is a very able lad, and he has done his work so well that he can compass an A.B.'s duties; on the way home the master makes an entry in the log book, giving the lad the rating of A.B.; then when he comes to be paid off he enters in the discharge the qualification of A.B.—has the superintendent under the statute to say "I refuse to allow this discharge to be given"?—Well if you want to know our secrets, we are advised that he has the right. The statute can be read to mean that it is your option to say he is not entitled to his A.B. without four years' service.

2417. Is it not a fact even though a false certificate of character be given, a glaringly and knowingly false certificate of character be given, that the superintendent has no power to withhold the discharge, and that he has only the power to withhold his signature and stamp?—No, I say Section 130 makes it obligatory upon the superintendent that the character should be given absolutely in accordance with the facts. That is the way I read the section. I

Mr. G. A.  
Law.

19 Jan. 1900.

Mr. G. A.  
Laws.

19 Jan. 1900.

think it is Section 130: "If any person (a) makes a false report of character under this Act, knowing the same to be false," etc., then follows the penalty.

2418. I am on the rating question; that is the whole of my point, that this lad has been two years an ordinary seaman, the master rates him as an A.B., pays him off, and puts it on the discharge; and under the inducement clause, if he had been an A.B. he could rate him as a first-class A.B., and then the superintendent has no power, has he, to forbid that?—I do not know that the superintendent could do it. He might say, "I want proof of service."

2419. (Mr. Howell.) It is a question how far the section goes in that direction. There are differences of opinion as to the interpretation of the law on this point?—Yes, that is so.

2420. (Captain Chalmers.) If we are advised that such pressure is only moral and not legal, would there be any justification for it?—All pressure in the direction of good by a Government Department is worth trying.

2421. You said that one of the great reasons that you advocated the system of continuous discharges was that it would be good for the good seamen, and they wanted it?—Yes, I admit that.

2422. Is it not a fact that under this wrapper system (case for holding discharge certificates handed to witness), which has been introduced for years, the good seamen will be in the same condition?—Oh, no.

2423. A good seaman who takes care of his records?—But that is quite a different thing. The crimp will take one of those out. Here a man has made a dozen voyages to Bilbao and back, or the Baltic and back—they are all about a month—in one year twelve discharges. Let the man be as good as he likes the crimp may steal the one under the top. The captain would see the discharge, and believing it to be genuine, would say: "The man has only been a month on shore, and he is quite good enough to take as able seaman." But the crimp cannot take out the second and third line of ours—he cannot take out those which are on one page. They are numbered pages.

2424. But my point is this: that it all depends upon the real meaning of the word "good." I hold that the good seaman will not fall into the hands of the crimp?—There is no seaman so good as that. I put the question to our Registry Superintendents, and they said: "Oh, in times of peace we could man you a vessel with blue-ribbon men." But take the majority of splendid seamen, and drunkenness is their failing. They get drunk the same as any other man may get drunk; or they may be drugged, and the opportunity may arise—it will happen to the best seaman in the world—when the crimp can take out one of these loose discharges and use it up for another person; but it can never arise with those books of yours, or ours.

2425. (Mr. Howell.) To put it very concisely, a continuous discharge certificate places far more obstacles in the way of crimps and bad seamen than any other form?—Yes. That is the answer I wished to give, and you have put it very nicely.

2426. (Captain Chalmers.) Do you hold that those discharges, if they are adopted—the continuous records—should be of conduct as well as of service? At present, under the statute, they are only considered records of the service, and the seaman has the option of having his character and conduct endorsed if he likes?—I say that your official should do all that he can to record the character, and explain to the seaman, say "You are a good, steady family man, have your character put in; it is going to be of use to you; you will be able to get more money by it," and then say to him, "If you do not I must put a cross to show your conduct is not to be filled in." My reply in chief says distinctly that your book requires a column for character.

2427. Do you advocate putting that on the face of the certificate?—I do, certainly.

2428. You do not advocate having blanks like that (pointing), and the certificate to be endorsed?—There is nothing here for the character, as far as I know.

2429. No, there is nothing. What I say is this, at present would you advocate this idea? The statute says that if the seaman wishes he can have his character for conduct endorsed on his certificate?—Yes, you want a place for it.

2430. The seaman says, "I want my character for conduct endorsed," and in the way this specimen book is printed, could not the superintendent turn over and stamp

the V.G. or whatever it was—he would have one stamped character for ability V.G. and a stamped character for conduct V.G., and the initials stamped here?—Yes.

2431. Would not that be just as good or better than putting it on the face of the certificate?—Yes, better.

2432. Then if the seaman said, "I do not require a character," then you would have the form stamped "Not required"—either "Not required," or some words to that effect?—It would be an excellent way of doing it. Our plea is that you have columns or places same as before. But whether endorsed, or in the print, matters little.

2433. But is not the fault of the present system that it is not endorsed, and another thing, its presence on the face of the form tends to convince the seaman that he is compelled to have that column filled in, and he has no option?—I think that is a perfectly fair argument. Here is another one (pointing), that is endorsed, the same three things exactly in accordance with the Act, and that is an official document in use.

2434. That is a colonial document?—Yes.

2435. With regard to the character then, and what you said about entries in the log, should a man be considered to earn a good character if he escapes being logged? I ask you for this reason, that you said you would not allow a man that had been logged to have a good character given to him, but if he escapes being logged would you advocate a good character being given to him?—I am afraid one must not say no to that. The master may have rendered himself liable under Section 130. But we cannot help it.

2436. At present the system that you want is this, that if the superintendent finds the master gives a "decline" to a man who has not got a certain entry against him in his log-book, he has to step in and say, "I demand that man is to have a V.G. because there are no entries against him." That would be the logical result of your proposal, would it not?—Yes; you cannot get beyond it, that is the common law. It is simple justice, with a logbook for offences.

2437. That is a negative proposition, but the other is a positive one where the master has the record. Are you going to compel a master to give a man a good character because he has escaped being logged?—No, but I would certainly say that your official has the right to bring to the notice of certain shipmasters Section 130, and say, "Well, if you make a false report of character you are committing a misdemeanour."

2438. (Mr. Howell.) But only when a report is made. The section says if any person makes a false report of character knowing the same to be false, and so on; but the report must be made?—But if the master, knowing that a man is guilty of an offence, refrains from logging him, and gives him a good character, he brings himself within that section by suppressing the truth.

2439. (Captain Chalmers.) There is no evidence?—And that is why I put that. I say this, that there was a time when the masters dared no more have logged the men than have committed the offence themselves. I mean there was a time when the men had merely to threaten a master, "If you report us you will hear from the Union." That was in 1888 and 1889 the unwritten law of the men. Masters have told me, "We dare not log offences."

2440. Would it not come to this in the case of a prosecution under Section 130 that the Court would find that the character described in Section 129 was the individual opinion of the master, and not the concrete opinion of a body of men sitting afterwards, or the concrete opinion of the crew, but that the character to be given under Section 129 was the individual opinion of the master as to the qualifications and conduct of that man?—If you are talking about the great unpaid, or even the stipendiary magistrates, that would be a different thing; but your official—as a court—would have knowledge of all the circumstances before him. Supposing that the master comes up with a clean log-book and the mate steps forward, or the engineer, and says, "Well, Mr. Superintendent, I do not think that is a proper record of the matter. This man committed an offence"—such as the one recorded in the log before you—"This man has been a public nuisance on board; we have been in terror of our lives, and here the captain brings a clean record, because he is afraid of violence." Then I say your official having the quasi functions of a magistrate can take such evidence as will enable him to say to the captain, "You are bound by law not to give a false report of character" when a public offence is committed.

2441. How are you to alter the master's opinion when the statute says that to give a false certificate of character

he must have known the same to have been false, and he in his individual capacity says it is not—how can he know it is false when his absolute conviction is that the man's character for conduct is good. True, he may have been guilty of temporary aberration from a straight line, but that does not affect his general conduct?—But, as I say, the officer steps forward, the same as at Port Said, and says, "Yes, Mr. Superintendent, the captain is afraid; he knocked the captain down and threatened to assault him and other persons. If there had been a policeman he would have taken this man in charge; there was no policeman, the captain was the policeman, and he will not do his duty under the statute." That is the way I look at it. There are such cases where men have been put in irons by the captain, and yet he has forgiven them and not logged it. How could that captain say in his opinion this man had done nothing? If he gave V.G.—that is the effect.

2442. Do you not recognise this, that a man's character for conduct is not founded on an isolated act, or two or three isolated acts, but it is founded upon his conduct throughout the voyage in general?—I think so. We want to be extremely lenient; but I say when you have such a record as this, with men being nearly every week of the voyage filled up in the log, and the Consul on board at each port, I say that you then have arrived at a point where unless you punish the men others will think it no use being V.G. or steady.

2443. These cases that you are quoting are exceptional?—They are exceptional now, but in the period that I spoke of they were quite the rule.

2444. If the seamen's representatives that have attended before us have told us that any system of continuous discharge we may bring into force will be useless without further legislation, what weight would you be inclined to attach to that?—The only weight is that we have issued 60,000 tickets of continuous discharge ourselves, and that if we had had the official stamp we would have had every man under continuous discharge. If the Board of Trade had agreed to stamp our documents we should have had this done.

2445. And you think that no further legislation is required, either as to rating or anything else?—In that way I do not think it necessary.

2446. Do you think we could depend upon the ship-owners instructing shipmasters, and the shipmasters insisting upon the book being given up when they signed articles of agreement?—I think that the continuous discharge should be given up to the master the same as the discharges, and under no circumstances can he get it back without the authority of your official.

2447. If the seaman fails to join, you would advocate the master being instructed to send the books back when he sent the Eng. 2?—Undoubtedly, because the man who failed to join might put forward legitimate reasons—as they do with us—with which we are satisfied.

2448. There is another question which does not bear entirely upon this, but it is an important one: In the case of deserters, known deserters, men who are constantly signing on, very likely four or five ships in a month sometimes, and always failing to join, who come into the shipping office, and are perfectly well-known to the superintendent and deputies as doing this, would you advocate the master being asked in each case, before the men came in, to sign a paper running something to this effect: "Should any man present himself who is a known deserter to the superintendent, will the superintendent be good enough to hand me the Deserters' Book bearing the man's name"?—I say that it is his duty now by the statute to keep a list of the deserters.

2449. But does the statute give him any right to show it to the master unless he is asked to do so?—I think possibly the exact terms do not give him the right—the master has to apply to see it.

2450. Would the shipowners approve of the department putting out a recommendation to the effect that the superintendent should in all cases ask the master to sign that paper, so that when these habitual deserters present themselves all that the superintendent would have then to do would be to turn up the Deserters' Book, open it at the name, and hand it to the master?—We certainly should approve of that, because in no other way can we get rid of these men. I want to tell you that this is not usefully carried out in your offices; they will not show

the list to our officers; possibly they have no right to ask for it.

2451. (Mr. Howell.) Section 230 of the Merchant Shipping Act of 1854 says: "A superintendent shall keep at his office a list of the seamen who, to the best of his knowledge and belief, have deserted or failed to join their ships after signing an agreement to proceed to sea in them, and shall not be liable in respect of any entry made in good faith in the list." It is quite clear that under that section a list has got to be kept, that it is only to be shown on request, and only to the master of the ship?—Supposing our official was the master of a ship?

2452. (Mr. Howell.) If he is a master of a ship he can ask for it—

2453. (Captain Chalmers.) He must be actually a master of a ship, not merely holding a certificate. (To the Witness.) If the man deserts abroad, what do you recommend that the master should do with the book then?—Hand it to the Consul, with account of his balance of wages due up to that date.

2454. In one part of your evidence you spoke of giving power to cancel the continuous discharge certificate on certain offences?—The same as we do for misconduct.

2455. But could that be done with a record of service. You see this record of service is a discharge really; it is only as that that we grant it under the statute. Could a record of service be cancelled?—Certainly, the same as a certificate, for certain offences.

2456. (Mr. Howell.) You would not wish to cancel the record of a fact?—I admit that there is nothing in the present law to cancel the men's record of service.

2457. (Captain Chalmers.) It is absolutely his property, is it not?—It should be, subject to forfeiture for certain offences.

2458. (Mr. Howell.) We shall be very pleased to hear anything that you would like to say. We are much obliged to you for your answers to our questions, and if there are some points that we have not brought out we shall be glad if you will add anything?—I wanted to explain our books to you. Lord Dudley asked that they should be sent up, and I marked one or two questions in this proof that I see needed some explanation. In Question 2116 I spoke of a number of letters—I do not know whether they have sent you that book up—a book full of letters? (The letters were handed to Witness.) Now these may seem to you very few. These are the letters and the reasons given by seamen for "missing" their ships, as they call it; they are in most cases desertions. In some cases they are proper reasons. I stated that sometimes in the Missions and Bethels they wrote or had the letters written for them. These are only a few which we have in the head office, because our system is to give them in at the District Offices; but I promised to put in this book (handing in same), as a sample.

2459. You bring them as examples?—Yes. Here is one written at a Mission to Seamen at Manchester: "Will you kindly give me permission to sign here through the Federation Offices! I joined the Federation nearly two years ago, and went out to Australia in Lund's Line. Owing to the discomfort on board I missed the ship in Port Adelaide and stayed working ashore, and then afterwards on the coast. I stated my case to the superintendent, and I showed my discharges which I had, and he told me to write to you. If you will be kind enough to let me make a voyage from here I will make myself proper in the Federation when I come back again. The chief engineer of the ship kept all our papers when signed in London to be returned to us at the end of the voyage, so that I hope you will give me a chance to get all right." It is signed "James Williams." We made inquiry, and we found that to be a *bona fide* letter. But the captain's report was that the man had deserted because he could get more wages ashore. We pointed that out, and said that "It will be necessary for you to apply to the shipowner and ask whether he has any objections to your being reinstated." Mr. Lund wrote back, saying that he had no objections, and the man was reinstated. That shows what the effect of our system is without any official support. If we had official support it would be much better. The one thing required is the stamp to certify the offence.

2460. Would you say that that is typical of the letters that you wished to explain to us?—Yes.

Mr. G. A. Laws.

19 Jan. 1900

Mr. G. A.  
Laws.  
19 Jan. 1900.

2461. Have you any other point?—Well, at Question 2117 you asked me if we had got any record of a man's services, and I said: "Yes, we have his record in our books. We have large entry books in which the men's services are entered." If you give me the large book No. 3, I will show you that our system is not so bad. We are able to trace men if required. This (pointing) is merely a register of a man, and here are his renewals, with the dates.

2462. Does this all refer to one man?—No. We take them in the ordinary way of filing; their names come out alphabetically, and these are the dates, with the renewals of certificates, which go for a certain number of years. That is the way that we trace them; but then it is done more completely in the Continuous Discharge Benefit book. That merely shows how each man is dealt with after simple registry.

2463. (Captain Chalmers.) How do you trace a record of service?—We go back on his book number, and trace it.

2464. Supposing he has lost his book?—We find the number of his parchment and the number of his book. There are consecutive numbers for each district. Every part that is issued in our twenty-one districts is marked with the name of the district, and the consecutive numbers 20,000 in each district—the moment you have got a man's parchment you can refer and see whether he is a benefit man, because there are thousands of tickets where the men do not take a benefit book for reasons of their own.

2465. Supposing a man loses his book, and refers to you, you find out his dates of renewal, but in the absence of an absolute duplicate of the book how can you fill in a new book with his services in?—We have the whole of his record in the book.

2466. You have a further book?—Oh, yes, that is the point I wished to explain. The man's number in the benefit book is put down in a column, and then each renewal that he has got is also put down. The number of his certificate is put down, and the number of his book, so that a man will come and say: "My name is So-and-so, and here is the record," and we track it up in the book, and find that it is correct.

2467. (Mr. Clark Hall.) Do you record each voyage?—Yes, in the Benefit Book.

2468. Then do you cancel the old book that is lost, and give him a new book, or do you give him a book with the same number?—We give him a book with the same number, but to renew the voyage records he must apply to your office.

2469. You do know, and have a record. If a man is in the habit of losing his book would you enter the fact that he has lost it, and you have issued a duplicate?—Yes, in "Benefit Registry," remarks column.

2470. (Captain Chalmers.) And enter in that column whether he has lost his book?—Yes. Then if a man dies he is either lined out, or marked with a date.

2471. But his detailed record of service is not kept?—The entry here is "Died, London Hospital, May, 1899," so that we do keep as good a record as we can.

2472. What I want to know is this: The detailed record of his service is not kept in each individual ship, but you are thrown back upon the Registrar-General?—Certainly, if required.

2473. Would not that increase the labour very materially if you had to do that, and the cost of the material?—Yes—Mr. Clark Hall does it so well—we need not attempt it.

2474. (Mr. Clark Hall.) Yes?—It has been merely a question of 6d. We have made them get their records, and had them entered.

2475. Each man is registered?—Oh, yes; this is the case of benefit claims only.

2476. Is that the 70,000 benefit tickets?—Yes. There we keep a central register. These (pointing) are the claims. There are a large number of those who have made claims and been paid, and the whole of the facts entered in regard to them. Then when it is a question of black-listing, I want to show you how that is worked out—but it is very imperfect as compared with your own system. This book is for 1897.

2477-81. Would you let us know how the black list works?—Now, the report of this man comes up, do you see, here from any district—this happens to be from the Thames District—"Carrol, James, Trimmer, No. of Parchment ticket, 16,126; District, Thames; No. of Benefit book, none; District, Address"—there is his address—"Name of the vessel; 'Failed to join after cashing an advance note.'" He had no book, and therefore was black-listed. A copy of this is sent round to our twenty districts, and then this man has to write a letter, as in this book.

2482. Would not he call himself "James Jones"?—But if he has a benefit book then we keep a central register of those men black-listed in this way—it is a small edition of your much more elaborate system. There is a cabinet in the central office and in the district office, so we can tell whether he is a second offender. We only keep the register of those who have got books. Here is "Bethel, William Henry, of the Royal Naval Reserve"—an A.B.—"No. of Parchment ticket, 146. Manchester"—his benefit book is 153, of Manchester—"Age, 28; 5ft. 4in. high, hair fair, eyes blue, complexion fair; personal marks, H. S. and an anchor and a heart on right arm"—and his offence—"Failed to join the ship, 'Manchester Corporation,' in March. 22nd November, 1899." That is the only record. Supposing a man has his ticket suspended for a month, if he is black-listed a second time his name is logged up, and without pressing very hard upon the men, they know that they cannot escape. But each case has to come before myself or the secretary, and we mark what the man is to get, or we refuse where the offence is not sufficient, or the man says, "I was ill," or, "I was drunk, and did not intend to desert." We form the best judgment—no doubt very erroneous sometimes, but we make an effort, and attempt to improve the man.

2483. Is there any other point?—I do not think there is anything beyond the register that we keep. We try, if possible, to carry out your views. This, No. 8, will be the Apprentice Register at the District Offices, and this is the form that we make at the Central Office.

2484. What is the object of this?—Simply to keep before the owner the question if he likes to see it.

2485. This is about the boy sailors?—Yes. This is to fill up, and these are the records of what he is, and then the application for the ticket. These are made for the owners, and they have their apprentices, and that is to remind them when the apprentices' renewal must be taken for benefit system. It is to encourage the lad during service.

2486. And gives every facility for the system?—Yes. At the same time it is not running very freely. We have not more than 500 cases, and we have not managed to get the whole of these off under the conditions of service.

2487. (Mr. Clark Hall.) Those 500 are boy sailors, are they not?—We get the application from the boy sailor, and register him in the district book for apprentices.

2488. And those others have not been employed yet?—Employed as boys only and ordinary seamen, but not as apprentices. This merely records whether he gets off his apprentices.

2489. Have they gone off as boys?—Yes, in most cases since 1894. It has been an utter failure so far as we are concerned. We have done all that we possibly could to facilitate engagements. There are still those who say that the Federation never pays anything for benefits. That is a mere delusion and a snare. I have produced the book recording payments.

2490. (Mr. Howell.) Is there any other point that you would like to call our attention to?—I do not think there is, unless I have not explained everything that you wished to know. I have put in all the different forms. This is the form for the men who apply at the office, and what we call the Daily Journal. This happens to be the Mersey District, I see. These are the men, and these are the dates when they apply, and when they get employment they are ruled out. The men present themselves, and this is how they deal with them. The men say, "You have got our record in your books, and we ask for employment." This man asks for employment on the 8th, 9th, 10th, 12th, and 13th, and he does not get any engagement. He has applied five days, and no captain has chosen him, but others have been selected.

2491. (*Mr. Clark Hall.*) You have one of these at each centre?—At each office. But that is merely a rough daily journal; in fact, for our purpose in this case it is to know how many seamen there are in each district, because in this way we get a return of how many are applying for employment.

2492. (*Mr. Howell.*) Generally, on the subject of our inquiry, is there anything you would like to add to your evidence?—I do not think there is. I have tried to put before you the reasons why continuous records should be adopted. Our strong reason is to get one man, one certificate, and to offer them a system of reward for good service. In that way we think, with the existing law, you can put considerable pressure upon seamen to become steady. They will see men applying to have their characters; and when they see that these men get regular

employment and better pay, others will try to improve themselves. At present they are all equal, and the bad men get the same chance as steady men.

2493. Have you anything more to add?—At Question 2167 there is a question of yours, Mr. Howell, where you say, "I think I have a print here of the proposed changes in your benefit system." I put this in, which is the actual document (*handing in same*). Then in Question 2172, where the schedule of the shore employments is put in, I want to explain to you what is there. You will see several of them are blank. That is because in that particular district, at the time they had not been able to get from the fire brigade, or scaffolders, the number of men; it is not because there are no men.

(*Mr. Howell.*) We are much obliged to you for your evidence.

*Mr. G. A.  
Laws.*

19 Jan. 1900.

[APPENDIX.]

No. 152.

APPENDIX.

[First Page]

PAPER handed in by *Mr. Smith.*

To have the surname of the seaman and the number of the certificate on the cover, and to be called on the outside "Seaman's Certificate."

DRAFT FORM OF SEAMAN'S CERTIFICATE OF SERVICE.

(Christian Names and Surname of Seaman (in full text).

1.

| Year when Born.<br>2. | Town and Country where born.*<br>3. | Height.<br>4. | Complexion.<br>5. | Colour of (1) Hair, and of (2) Eyes.<br>6. | Personal Marks and Peculiarities.<br>7. |
|-----------------------|-------------------------------------|---------------|-------------------|--|---|
|                       |                                     |               |                   | (1.)<br><br>(2.)                           |   |

\* If born in a foreign country state if a natural-born British subject, or if naturalised.

NOTE.—All entries or writing in this book to be made by Government officials only.

Seaman's Signature.  
8.

NOTE 1.—This Book may be handed to the Master on the Seaman's engagement, and retained during his service. It is then to be delivered with the Agreement to the official before whom the Seaman is to be paid, to have the Certificate of Discharge entered herein.

Should the Seaman desert, or fail to join the ship, or die, this book is to be sent (with the Form Eng. 2) to the Superintendent of the nearest Mercantile Marine Office.

NOTE 2.—Any Person who forges or fraudulently alters any Certificate or Report, or who makes use of any Certificate or Report which is forged or altered or does not belong to him, shall for each such offence be deemed guilty of a misdemeanour, and may be fined or imprisoned.

N.B.—Should this Certificate come into the possession of any person to whom it does not belong it should be handed to the Superintendent of the nearest Mercantile Marine Office, or be transmitted to the Registrar-General of Seamen, Custom House, London, E.C.

[Second and succeeding Pages.

CERTIFICATES OF DISCHARGE.

\* If the Seaman does not require a Certificate of his character, obliterate the discs with two horizontal lines and the words in Column 19 that do not apply.

# INDEX.

## BARCLAY, Capt. G. H., Summary of his Evidence (713-819).

Represents Merchant Service Guild, 713-4. Submits resolutions passed by Guild expressing strong opinion that old system of discharge should be abolished and that continuous discharge system should be made compulsory. Each discharge should give name, personal description, nationality, character, 715. The Guild is composed of masters and officers, the number of members being about 4,000, almost all in active service, 716-9. He had served at sea for 21 years, six years as master in Hall Line, now retired, 720-2; thinks present system of discharge wants altering, for if you give a seaman a bad discharge he simply tears it up and gets a ship with a previous discharge; has sailed with a continuous discharge system for Lascars, 723. Continuous discharge system would tend to stop drunkenness and insubordination, 724; care would have to be taken to prevent seamen tearing or burning out records of bad character in the continuous form, 725-6. There should only be one form of continuous discharge, and it should be a record of service and character, 727-9. Was not aware that under the law the seaman can decide whether or not a record of his conduct is inserted in the present discharge and that to make it compulsory legislation would be required. Does not think two forms, one for service and another for conduct, should be adopted. The Guild considered that there should be one book, 730-50. When engaging a man he does not ask for his discharges because he cannot be sure that those he has really belong to him, 751-5. On the whole thinks that masters should take charge of continuous discharge books during voyage in order to check desertion. If a man deserted his book would be sent to the Registrar-General and he should be able to get a copy of it in case of loss, 756-65. Does not think seamen would object to a continuous discharge system, but the seamen's representatives would, 766. If the master took the continuous discharge book from the seaman at time of engagement, produced it to the Superintendent for an entry of the engagement to be made and retained the book, then if seaman deserted there would remain in the book a record of his having shipped, 767. Although official discharge form recognises simply the record of service, his Guild consider the man's ability and conduct should be recorded as well as the service, 768-81. As a rule the seaman can get a ship when he wants one, but officers cannot, 782-3. In engaging men the captains should have no difficulty in insisting upon the books being produced and the Superintendent should enter date of engagement and hand book to the master, 784-7. If system were adopted thinks masters would not engage men who did not produce their books, provided the masters could afford to refuse men, 788-9. The success of the system would greatly depend on the shipmasters, 790; they would not ship men without books either at home or abroad unless driven into a corner, 791-2. Books of deserters abroad should be handed to the Consul, 793-5; if space for character was consistently blank it would influence him against the man, 796-8; he would certainly ask for report on character if that was provided separately, 799-800. In engaging substitutes at last moment a captain might have to take whom he could get, but if they had books he would not be at the mercy of "pier-head jumpers." Men would have better discharges if continuous system were enforced, 801. The continuous discharge system for "natives" is considered a great success, 802. Present system of discharges has completely broken down, 808. Thinks masters would, as far as possible, insist on the production of the continuous book, 809-12. A "V.-G." character is given lightly now often to save trouble, 813-14; for present discharge is practically valueless, 815; but with continuous system masters would be careful to report true character and if they erred at all it would be on the side of mercy, 816-7. Any discharge without a

description of the man is absolutely useless, 818. System of continuous discharge would be popular with the respectable and better class men. Nearly all best Britishers are in the big lines, where the system of continuous discharge is practically in vogue. He refers to the Cunard, White Star and Dominion Lines, 819.

## BEAZLEY, Mr. J. H., Summary of his Evidence (1303-1418):

Is a steamship owner, 1304-5; is connected with the Liverpool Steamship Owners' Association, 1306-7. He advocated continuous discharges in 1883 in order to prevent seamen failing to join their ships, 1308; the proposal was opposed by Mr. Gray, of the Board of Trade, because (1) the register ticket had failed; (2) a continuous record of service was already obtainable; (3) captains ought not to have the power of spoiling a man's record; (4) to require the continuous certificate in every case would be a hindrance to shipping; (5) the continuous certificates would cost 1,000*l.* to 2,000*l.* a year, 1309-11. In 1888 Mr. Gray opposed a proposal to prevent carpenters and boat-swains shipping without certificates of competency; and approved of masters holding men's discharges after signing articles, 1313. A voluntary continuous certificate tried at Liverpool did not succeed, 1315. Liverpool shipowners approve continuous certificates in theory, but are afraid of them being made compulsory, 1320. Continuous certificates would be very successful with the better class of men, 1321; but there is not sufficient reason for introducing them at present, 1322. A law to prevent men shipping without continuous certificates would be strongly objected to, because it would restrict the field of selection and cause delay and detention to ships, 1323-37. Shipowners claim the right enjoyed by other employers of engaging whom they choose, 1340. If the new continuous form is merely to take the place of the present form there would be no objection to it, 1343-7. To require all men to have continuous certificates would cause delay when the men had lost their certificates, 1352-6. The objection to the present system, viz., that men tear up bad discharges, would apply to the continuous form, 1361-6. If masters valued the continuous form, as showing the men's characters, and refused to engage seamen without them, the men would be less likely to tear them, 1367-75. At present shipowners do not complain of men not keeping their engagements or as to their quality, 1377-87. There is reason to fear that continuous discharges will involve compulsory rating, the two things having been coupled together already, 1388-96. A rating Bill would be an interference with freedom, 1397-8; and would place additional power in the hands of agitators, 1399-1404. Continuous discharges would give masters some knowledge of the men they were engaging, and there is no objection to them as long as they are not made compulsory, 1405-1410, 1418.

## BENNET, Mr. James, Summary of his Evidence (1837-1872):

Is district secretary of Sailors' Union at Goole, 1837. Holds master's certificate, but six years ago through an accident was incapacitated from going to sea; has held his present appointment three years, 1838-41. Has had every chance of knowing about engagement and discharge of seamen, and of devices to get them to desert, 1842; and thinks present system of discharge practically useless, men do not value their discharges, and a boarding master can provide one if wanted; a man's appearance often gets him a ship without a discharge, 1843-4. It is common for "V.G." and bad discharges to be given to men who do not deserve them in either case, 1845-7. Continuous discharges should only be records of service; he recognises, however, that the captain is the right person to give a character, but there should be oppor-

tunity for appeal against a bad character, though that might mean fresh legislation, 1850-9. Continuous discharges should have the same effect as a Naval Reserve Book, should be a complete record and should be beneficial to the seamen, and to the owners and officers, 1860-5. The usual discharges given are "V.G." or "Decline," and he would not consider "G." equivalent to "V.G.", 1866-9. Thinks discharges are given too lightly, and would recommend that no continuous discharges be granted to foreigners who are not able to speak or understand the English language, 1870-1. A system of continuous discharges would be a great improvement, 1872.

**BROWN, Mr. William, Summary of his Evidence (1942-98):**

Is Secretary of the North Shields branch of the National Sailors' and Firemen's Union, and a member of the North Shields Local Marine Board, 1942. He became secretary of the branch 10 years ago, when he left the sea after 16 years' experience in all kinds of vessels, and he has been present when thousands of seamen have been discharged, 1943-4. Thinks compulsory continuous discharge certificates would be beneficial to both owners and men, 1945-6, 1959; discharges are now given too lightly, "V. G." and bad discharges being given wrongly in many cases, 1947-9. A lot of trouble has been caused on board ship by what is called "field days;" on those days men are required to do extra work without getting extra pay, and they often get bad discharges through complaining of this, 1950-6. The present system of discharges has not worked well and a system of continuous discharges would be an improvement, 1957-8. Instances a case in which a Local Marine Board were not prepared to take the discharges alone as a record of character, but wanted written certificates in addition, 1959-61. Thinks seamen would value a form of continuous discharge, and that it would be the means of steadying men, checking failures to join, 1962-3. Considers men are sometimes kept too long in strange ports waiting to be paid off, 1964-6; A "G" discharge means practically "go," 1967-71. Officers carefully examine discharges as a rule and a man will not present a bad one, but will say that he was working ashore during the period covered by it, 1972-5. Has never seen a discharge on which there was no character at all, 1976-8. Does not think seamen really understand that they can refuse to have their character recorded, 1979. Continuous discharges should be in book form, and on the face of the page a description of the man, his name, age, rating, etc. should appear, 1980-2; but he hopes some means of appealing against a captain's bad report may be adopted, the seaman's option of refusing a character not being sufficient, 1983-9. Continuous discharge books should be given up to the master at the time of engagement, and he would prefer that afterwards they should be kept by the superintendent until claimed by the seaman again, 1990-4. A stiff fee should be charged for supplying duplicate books, 1995-7. The adoption of the continuous form would improve matters all round, 1998.

**BULKELEY, Captain T. D., Summary of his Evidence (1999-2077).**

Has been in the service of the Royal Mail Steamship Company all his life and only left the sea last year, 1999-2001; thinks continuous discharges would be a good thing and would prevent many failures to join and desertions, especially if the books were handed to the master as soon as the seamen had signed, 2002. They should be compulsory, and should record both service and character, but report on latter should not be entirely left with the master, 2003-5. The character should be based on entries in the log, and should be verified by the official before whom the seaman is being discharged, 2006-10. The "V.G." discharge is often given given too lightly, 2011-13. A seamen should be forced to take a character for the continuous discharge form should show the whole history of the man, 2014-20. The book might contain records extending over a period of five years, 2021. A continuous discharge system would be popular with the good men, and probably would steady others, at the same time preventing the robbery and exchange of discharges and the consequent presentation of bogus certificates, 2022-6. It would probably check desertions and a description of the seaman should certainly appear in the book, 2027-8. Such a system would be a distinct advantage,

2029-30. A man with a "G." discharge would be looked upon as rather an inferior character, 2031-3. Did not know that according to the law the superintendent is alone empowered to record a seaman's character on that seaman's request, but thinks that if a continuous form is adopted the law should be altered so as to make it compulsory for character to be stated, 2034-46; bad reports being verified from the log by the superintendent, although, if difficulties occur, the present optional system is a good alternative, 2047-53. Masters would co-operate in bringing a continuous system into force, 2054; and would, except under special circumstances, insist upon the production of the book before engaging a man, 2055-8. Upon production of the book an entry should at once be made of the engagement and the book given into custody of master. If the man failed to join it should be sent to the superintendent; if he deserted abroad it should be handed to the Consul or to the shipping master, 2059-66. In shipping men abroad the book should be produced and no man engaged without it unless it was absolutely necessary for the purpose of making up the crew, 2067-8. If a man consistently refused to have a record of his character he would consider it an indication of bad character; to rely alone on a man's record of service would not be entirely safe, 2069-74; masters would help to institute the continuous system and so would those in authority at the Seamen's and Firemen's Union, 2075. In case of engaging substitutes at the last moment masters might be allowed to dispense with the production of the book, 2076-7.

**CAREY, Mr. Thomas, Summary of his Evidence (1873-1941).**

Is secretary of the Cardiff branch of the Sailors' and Firemen's Union, with which he has been associated since 1892. Previously he was at sea for 10 years 1873-8; has had seven years' experience in large ports of engagements and discharge of seamen, and thinks present system of discharge is a farce, 1879-81; it may be all right as a record of service but not for character and ability, 1882. Both "V.G." and bad discharges are given unfairly in many cases, 1883-5; gives specific cases in which bad discharges have been given wrongly, 1886-92. Seamen of Bristol Channel ports are of opinion that continuous discharges should be made compulsory, and that they would check failures to join, and desertions abroad, but report on character should not rest solely with captain; their adoption in time would make a better class of men follow the sea, 1893-5. Seamen would value a continuous form more than present form; it should be only form approved by Board of Trade and should be produced on engagement, 1896-1901. It should simply be a record of service, 1902-6. Continuous discharges would have a good effect on desertions, 1907-9. And would be a great benefit, 1910-12. Most masters would construe a "G" discharge as a bad one, 1913-16. The book of continuous discharges should be similar to the Royal Naval Reserve book and ought to provide for ten years' voyages, 1917-19. Seamen would not object to give up their books at time of engagement and an entry of the engagement should be made at the same time as the articles are signed, 1920-2. If a seaman failed to join or deserted his book should be returned to Board of Trade, 1923-4. Books should remain in possession of master during voyage, and if a seaman deserted abroad the book should be returned to Board of Trade rather than handed to Consul, 1925-36. The continuous form should simply be a record of service, but seamen could have the option of getting their characters stamped on the back, 1937-9. A fee should be charged for supplying a duplicate book, 1940-1.

**CARRINGTON, Captain JOHN, Summary of his Evidence (1190-1244):**

Is a master mariner, and has been in command of sailing ships and steamers since 1876, 1190. Represents the Mercantile Marine Service Association, which comprises nearly 3,000 shipmasters and officers, 1191-2. The Council of the Association consider that a system of continuous discharge certificates should be adopted, and should be in such a form as could easily be glanced over by a master or mate when selecting a crew. It should contain a description of the holder, and columns for reports on conduct and ability, and another for remarks. The master should have full discretion in giving a character to a seaman. As a rule masters are very cautious in giving a bad dis-

charge, but in the case of continuous discharges they should be careful to see that bad discharges were justified by entries in the official log. He does not think that one bad discharge in a series would be fatal to the chances of future employment, and considers that a compulsory system of continuous discharges would prevent personation. The form adopted might be an adaptation of that used in the Navy, or by the Government of India for Lascar seamen, and an entry should be immediately made upon the seaman signing articles, and the book kept by the master until the vessel had sailed, thus checking "failures to join." If a seaman failed to join, his book should be returned to the superintendent, 1193, 1239-44. Seamen should be obliged to accept the master's report on character, and he would change the law in order to effect this. He did not know that the seaman at present need not accept anything but a discharge showing a record of service, 1194-1202. He thinks his point as regards character would be met by the seaman having the option of getting a report placed on the blank back of the discharge, for if no report appeared there masters would consider that there was something against the man, and under these circumstances he would not press for columns for a compulsory record of character and ability, 1203-11. Admits that "V.G." discharges are given very liberally, but in the majority of cases he thinks that masters give them because they consider the seamen deserve them, 1212-22. He thinks masters would be very careful to give really just characters in the case of continuous discharges, 1223-4. The man's book might be given to him when the vessel has sailed, 1225-8. Thinks a book would be preferable to a sheet, 1229. He takes charge of the certificates of his officers during the voyage, and would take charge of the men's books if allowed by law to do so, and would not engage a man without seeing his book. Thinks masters would co-operate in this way, 1230-8.

CHANDLER, Captain S. R., Summary of his Evidence (963-1071):

The present discharges are useless because they can be destroyed, and contain no description of the holder, 903-7. The only discharge that would be any good would be a compulsory and continuous one containing a record of service and character, 908; it would make men behave better, 909. A man with "G." is sometimes at a disadvantage, but some large companies give nothing higher, 910-11. "V.G." is given indiscriminately, 912; partly because the shipping officers persuade masters to give "V.G.", 913-7. The continuous discharge should be compulsory, 918-9; and should contain a record of character, 921; there is no insuperable objection to making men take their character, 924-8. If there are two books, one for service and one for character, masters will not fill them up unless compelled to, 930-1. Men who keep the present discharges for years are no better off than others who don't, 932-44; this is partly due to masters not giving true characters, 945-7. If the record of character is left optional, it will become a dead letter, 948-53; men will not have their character recorded unless it is compulsory, 954-6; they are never consulted about it now, 957; legislation could provide against masters giving bad characters unjustly, 957-8; this could be done by providing that entries in the log against a man should be signed by more people, 959-63, 1067-8. In the days of sailing ships the discharges were a fair indication of a man's ability, 966-70; and of character, 971; they are not so now, mainly because masters want to avoid trouble when paying off their men, 972-5; mercantile marine officers sometimes oppose a man getting a bad discharge, 976-84. He himself requires the production of discharges whenever possible, 985-7. The men do not value the present discharges, 988-9; this is one of the reasons for advocating a continuous form, 990. If the continuous form were the only one, and compulsory, masters would require its production, 991-3; but they should be compelled by law to require it, 994-8. The date of engagement should be entered at the time, 1001; the continuous discharge should contain a description of the man, 1003-4. They should be retained by the master or officers throughout the voyage, 1005-6; discharges of men who fail to join are eventually destroyed, 1008-10. The continuous discharge should contain a record of character, 1012; there is no difficulty in making this record compulsory, and if it is optional it will not succeed, 1013-25; the record of service would then be the only indication of a man's

character, 1026-9. Masters should be fined who give good discharges to men who have been logged, 1035-7. Substitutes would for some time have to be shipped without books, 1038-40. Deserters' books should be returned to a superintendent or to the Registrar General, 1041. Discharges should contain a continuous record of service and character, 1042-4. If not made compulsory, the new system will be a failure, 1045-6. Masters should not be allowed to give good discharges to men who have been logged for serious offences, 1047-8. Masters would see that seamen had the continuous discharge books if they were made compulsory, 1049-52; compulsory discharges should be accompanied by some compulsory provision as to rating, 1053-6. Compulsory continuous discharges would tend to improve discipline, 1058; the present discharge is useless, because characters are not correctly given, 1059-61; masters should not be allowed to give good characters in bad cases, 1062-6; masters could not be more lenient than they are now, 1069.

COLEMAN, Mr. E. H. Summary of his Evidence (50-102):

Has had long experience at the office of the Registrar-General of Seamen, 50-52. Prior to 1835 the issue of discharge certificates was optional, and few were given, 53-5. In 1835 an Act required masters to give a certificate of discharge specifying the seaman's service, 56-7. An Act of 1844 required the certificates to be on a specified form, 58. In 1845 the register ticket, which was intended to identify the men and prevent desertion, was introduced, 58-67; there were many prosecutions for desertion, but the ticket did not succeed, 68-76. A voluntary form of continuous discharge was tried in Liverpool between 1846 and 1849 in connection with the Sailors' Home, but it had no legislative sanction, and failed, 78-81. In 1857 the Board of Trade issued a continuous discharge, which failed because it imposed much extra work on the superintendents, 82-90; the demand for these continuous certificates dropped off, the documents got dirty, and there was a difficulty in getting them produced for the second voyage, 91-4. In 1851 the record of character was first introduced into the certificate of discharge; it was optional then as now, 95-101. The changes in the form of discharge certificates have referred principally to the mode of marking the conduct and ability, 102.

CHARACTER.—Report of character was first introduced in 1851; it was voluntary then as now (Coleman, 95-101). Under present law seaman has option of having a copy of his report of character endorsed on his discharge certificate, or having it on a separate form (Murton, 1-28). Did not know seamen could refuse to have their character recorded on the discharge certificate (Carrington, 1194-1202; Hall, 1159-67). Seamen do not understand that they need not have their character recorded (Wilson, 1437; Brown, 1976-9). Seamen never demand record on a separate sheet, and do not know that they are entitled to it, or that they need not have their characters recorded on their discharges (Porteous, 399-404; Rees, 520, 550-2; Smith, 574-8). Character is put on the discharge as a matter of course (Rees, 553-4). Seamen are not asked whether they want their character recorded (Smith, 595-6). Masters seldom give bad discharges on account of the trouble involved (Pritchard, 1257-9; Wilson, 1435). "V.G." is often given lightly to save trouble (Barclay, 813-4). "V.G." is often given too lightly (Bulkeley, 2011-13). Masters do not give true characters at present (Chandler, 945-7, 972-84, 1059-61). Character is not given always according to desert at present (Laws, 2179-88). "V.G." is given loosely (Rees, 510-14). More common for masters to give too good report than unjustly bad one (Smith, 583-4). General practice is to give "V.G." (Smith, 583-8). Good characters are given when they should not be (Shaw, 320-30). Good and bad character is often given unfairly (Bennet, 1845-7; Carey, 1883-92; Brown, 1947-56). Masters are careless in giving characters (Henson, 1745-9). Cases in which masters have given characters wrongly (Foley, 1574-82; Henson, 1765-95). Character is not recorded in federation benefit books because the official discharge does not give a true record of character (Laws, 2323-39). "V.G." is given liberally, but in most cases masters think the men deserve it (Carrington, 1212-22). As a rule masters are very cautious in giving a bad discharge (Carrington, 1193). Legislation could pro-

vide against masters giving bad discharges unjustly by requiring entries in the log against a man to be signed by more people (Chandler, 959-65, 1067-8). A master should not decline to report except where an offence had been properly entered in the log (Hall, 1109-13, 1176-80). Bad discharges should be justified by entries in the official log (Carrington, 1193). A bad discharge should not be given unless justified by entries in the log (Pritchard, 1296-1302); should be based on entries in log and verified by official before whom seamen are discharged (Bulkeley, 2006-10). Bad character should not be given unless a man has been logged (Laws, 2212). Masters who give good discharges to men who have been logged should be fined (Chandler, 1035-7, 1062-6). Superintendents should settle disputes about character and see that the truth is always recorded (Laws, 2209-11, 2281-96, 2305, 2435-43). Seamen ought to be obliged to have their character recorded, but it will be sufficient if they have the option of having their character on the back of the discharge (Carrington, 1194-1206). If record of character is left optional it will become a dead letter; unless made compulsory men will not have it recorded; continuous discharges should contain record of character (Chandler, 948-56, 1012-29). No insuperable objection to making men take their character (Chandler, 924-8). If record of character were compulsory, it would not be unpopular, for the majority are good seamen (Rees, 508-9). Bad seamen would object to a compulsory record of character (Muskerry, 840-1). If character is made compulsory seamen should have right of appeal to some court of appeal (Wilson, 1488-1501; Henson, 1814-21; Bennet, 1851-9; Brown, 1985-9). No appeal necessary against a wrong character if seaman need not have his character recorded (Muskerry, 898-96.1). The continuous discharge should provide for the endorsement of character (Laws, 2304, 2427-32). Record of character should appear on continuous discharges, but seamen should still have the option of not having it recorded (Shaw, 374-5; Porteous, 431-5; Rees, 480-502; Smith, 591-4). Seamen should be pressed to have their character entered in their continuous discharges (Laws, 2426). Character should be on separate paper, but it might be put on the discharge if the seaman wished (Wilson, 1445-9, 1510-14). Character should be put on the back of the continuous certificate or left unrecorded (Kenny, 1716-7). The growing practice of giving special testimonials to firemen is a good one (Kenny, 1710-3). Under present law seaman can obtain duplicate copies of the report of character for such voyages as he selects (Murton, 29-42).

#### CONTINUOUS DISCHARGE CERTIFICATES.—

Former attempts to introduce continuous certificates in this country (Coleman, 78-102; Hooke, 165-80; Beazley, 1308-17; Laws, 2229, 2231, 2311). Description of system of continuous discharges for Lascars at Bombay (Porteous, 420-9). The Norwegian discharge book is a mere record of service, and is used in connection with the naval service (Eckell, 655-87). Swedish continuous discharge is simply a record of service, and was instituted in connection with a pension system (Eckell, 619-654). It is worth £50,000 of the country's money to introduce continuous certificates on which character would be recorded (Laws, 2309-10). If compulsory they would be beneficial to owners and men (Brown, 1945-6, 1962-3, 1998). Would be popular with good men, steady bad men, and check personation (Bulkeley, 2022-6). Would be very successful with better class of men (Beazley, 1321; Laws, 2232). If compulsory, would benefit seamen (Carey, 1893-6). Would be beneficial to seamen, owners and officers (Bennet, 1864-5). Seamen would take a pride in their books (Smith, 610). Would be of great benefit to seamen and masters (Henson, 1741-9). Would be to the interest of both masters and seamen (Hall, 1102-3). Would be advantageous and would prove a man's title to his rating and his services for Royal Naval Reserve purposes (Rees, 465-70). They would check desertion and be of great benefit (Carey, 1907-12). Would make men behave better (Chandler, 909). Would check desertions and failures to join (Bulkeley, 2002). Would be a check to loafers and bad characters (Hall, 1098-1100). Would make seamen steadier (Henson, 1800-1). Would tend to stop drunkenness and insubordination (Barclay, 724). Would lead to improved discipline (Chandler, 1058). When each man has one book pressure can be put on seamen to become steady (Laws, 2492, 2379-81).

Would prevent incompetent men getting to sea (Foley, 1607-12). Would make a good selection easier when there was a crush of men (Wilson, 1464-71). Would give masters some knowledge of men they were engaging (Beazley, 1406-7). There will be less possibility for personation (Laws, 2198-2200). Will prevent personation (Muskerry, 829; Hall, 1089-92; Carrington, 1193). Would check crimping from foreign ships (Wilson, 1483). Would place more obstacles in the way of crimps and bad seamen (Laws, 2421-5). Are not likely to be misused by crimps (Laws, 2319-22). Difficulty of getting a second book would prevent men selling them to crimps (Hall, 1152-3). Men could not get two books if superintendents insisted on proof of rating (Laws, 2360, 2367-70). If system were properly enforced men would not lose their books (Wilson, 1460). They would be of great value, even though there is no power to require their production on engagement (Laws, 2353-7, 2362-3). Compulsory continuous form would be a distinct improvement on the present system (Foley, 1605-6). Would be an advantage even with the present law (Foley, 1672-4; Kenny, 1709). They are impracticable; previous attempts have failed, and the documents become dirty, and get lost (Shaw, 291-4, 340-8). Little good can be done without legislation, and from seaman's point of view it is hardly worth while disturbing present state of things for such a small change (Wilson, 1543-4). There is not sufficient reason for introducing these certificates at present, but there would be no objection to them if they simply take the place of the present form (Beazley, 1322, 1343-7, 1418).

Should they be Compulsory?—They should be compulsory (Barclay, 715; Muskerry, 826-8; Chandler 908, 918-21, 1042-6; Wilson, 1452, 1515, 1519-25; Foley, 1585-6; Carey, 1893-1901; Kenny, 1692-93, 1699-1700; Bulkeley, 2003-5). Should be the only form approved (Hooke, 202-4; Smith, 590; Henson, 1737; Laws, 2222, 2313-4). Scheme would soon fail unless men were not allowed to ship without continuous form (Wilson, 1476). Masters should not be allowed to engage men without books (Chandler, 991-8, 1049-52; Foley, 1620). Masters should insist on production of books at time of engagement (Kenny, 1725-6). Masters will demand the production of the books on engagement (Carrington, 1235-8; Pritchard, 1287-95). Masters would insist on production of books, save under exceptional circumstances (Bulkeley, 2055-8, 2075-7). Masters would insist on production of books whenever they could (Barclay, 788-92, 809-12). Masters would co-operate in making the scheme a success (Hall, 1181-9). A law to prevent men shipping without continuous discharges would be strongly objected to, because it would restrict the field of selection and detain ships (Beazley, 1323-37). Shipowners would oppose legislation which insisted on every man under all circumstances having a book (Laws, 2253-61).

Inclusion of Character.—Legislation would be required to enforce inclusion of record of conduct and ability (Murton, 45-7). Endorsement of character should be compulsory (Bulkeley, 2034-46; Chandler, 908, 918-25, 948-56, 1012-29, 1042-6). If record of conduct and ability is made compulsory, seamen should have a right of appeal to some court (Wilson, 1488-1501). Seamen should be compelled to have their character recorded, but it will be sufficient if they have the option of having their character on the back of the discharge (Carrington, 1194-6). A compulsory record of service alone would be an advantage to some extent (Muskerry, 847-55). Might be simply a record of service, and the man's character could be placed on the back (Rees, 555). Character should not be on the certificate, but on separate paper (Wilson, 1510-15; Kenny, 1681-93). Should be simply a record of service; at any rate, men should not be forced to have their character recorded (Foley, 1587-94, 1647-57, 1660-4). Should be a record of service only, but seamen could have option of having character stamped on the back (Carey, 1902). To rely on a man's record of service alone would not be entirely safe (Bulkeley, 2069-74). A copy of the report of character might be put on the back of the discharge (Porteous, 431-6; Rees, 480-502, 514-28; Smith, 591-603; Muskerry, 863-4; Hall, 1107-8, 1169-75; Wilson, 1445, 1518; Pritchard, 1266-78; Laws, 2304). Character should be put on the back of the certificate, or left unrecorded (Kenny, 1716-7). Seamen should have option of having character on discharge, or on separate sheet.

or not at all (Henson, 1752-64). The character spaces should never be left blank (Laws, 2280). The discharge should contain a record of conduct and ability (Barclay, 729; Carrington, 1193; Bulkeley, 2003-5). Conduct, ability, and sobriety are mentioned in the Australian and New Zealand discharges (Laws, 2215). Masters will be careful in giving characters if continuous discharges are introduced (Carrington, 1223-4). Men would keep their discharges, and masters would give just characters (Pritchard, 1260-5). Masters would be more careful in giving character; if they erred at all it would be on the side of mercy (Barclay, 816-7).

**Points of Detail.**—Their introduction would not materially increase the work at the Victoria Docks Mercantile Marine Office unless copies of the discharges had to be kept (Porteous, 456-8). Amount of extra work would depend on whether the books were handed in beforehand or not. In any case, they would entail more work, and cause additions to the staff (Shaw, 238-65). Would not much increase the work at the North Shields Mercantile Marine Office if the books were sent to the office beforehand (Rees, 529-37). Would simplify clerical work (Smith, 571-2, 604). Should only be in book form (Kenny, 1509, 1516). Should be like the Royal Naval Reserve books, and provide for ten years voyages (Carey, 1917-9). Books would be preferable to sheets (Carrington, 1229). Should be in book form (Kenny, 1714-5). Should be in a form easily examined by a master when selecting a crew (Carrington, 1193). The form might be an adaptation of that used in Navy or by Government of India for Lascars (Carrington, 1193). The Naval Reserve book would be a good model (Laws, 2312). A fee should be charged for duplicate books (Foley, 1658-9; Kenny, 1727-9; Henson, 1834-6; Carey, 1940-1; Brown, 1995-7). If a central register were to be kept of continuous discharges, twelve additional clerks would be necessary. Such a register might supersede engagement books and lists of deserters at the ports (Hooke, 205-14). Continuous discharges should be worked in connection with a registry system (Laws, 2201). A register of continuous discharges could be easily established (Laws, 2351-2). Should be liable to cancellation (Laws, 2454-7). Should be forfeited for repeated desertion, (Laws, 2205). A proper tribunal should have power to suspend a seaman's certificate (Foley, 1665-71). Should be retained by the master during the voyage (Hooke, 190-5; Porteous, 443-9; Rees, 540-3; Muskerri, 880-7; Chandler, 1005-6; Kenny, 1718-24; Laws, 2202, 2446). Compulsory continuous discharges should be accompanied by compulsory provision as to rating (Chandler, 1053-6). Men should prove their rating before getting the continuous certificate (Foley, 1595-8). Should only be given to those who know English (Wilson, 1482, 1484-5; Bennet, 1871). Should be called a certificate of service (Smith, 609). The system should not be retrospective, and six months' notice before introducing would be enough (Smith, 612-4). Could be limited to certain classes of seamen so long as Section 128 of the Merchant Shipping Act, 1894, is complied with (Murton, 48-9).

**DESERTION.**—Deserters, for repeated offences, should have their books forfeited, or should undergo period of compulsory Naval Service (Laws, 2205-6, 2297-2302). Masters should have to prove alleged desertion (Laws, 2207-8). The black list of men who have failed to join is not shown to masters unless they ask for it (Shaw, 289-90). Superintendents should call the attention of masters to habitual deserters (Laws, 2448-52). Deserters' books should be returned to the Superintendent or the Registrar General (Muskerri, 881-7; Chandler, 1041). If a man deserts abroad his book should be sent to a Consul or brought back to a Mercantile Marine Office (Wilson, 1534). Deserters should get their books when they come back (Wilson, 1479-81).

**DISCHARGE CERTIFICATES,** present form of.—History of certificates of discharge (Coleman, 50-102; Hooke, 131-79). Under the present law the discharge certificate is a record of service pure and simple; the seaman has the option of having his character recorded on it or not, or of having a copy of his character on a separate sheet (Murton, 1-28; 42-47). Bad men seldom get bad discharges, because masters wish to avoid trouble, and good men sometimes get bad

discharges through spite (Wilson, 1435-6). "V.G." is often given lightly to save trouble (Barclay, 813-4; Pritchard, 1257-9). Character is often given unjustly (Bennet, 1845-7; Carey, 1884-92; Brown, 1947-56). Discharge certificates do not give a true record (Foley, 1561-5). Cases in which masters have given wrong characters (Foley, 1574-82; Henson, 1768-95). Case where a man was discharged as "A.R." after one month's sea service (Foley, 1566-73). No guide to man's capacity (Wilson, 1430-4). Does not ask for them when engaging a crew as he cannot be sure they belong to the holders (Barclay, 751-5). Masters look more to men's appearances than to their discharges (Shaw, 331-4). In the days of sailing ships the discharges were a fair indication of a man's ability and character, but they are not so now mainly because masters wish to avoid trouble (Chandler, 988-84). Masters get no idea of men's characters from discharges, and they are unsatisfactory to men (Wilson, 1419-24). Present discharges are useless, because they can be destroyed, and contain no description of the holder and characters are not correctly given (Chandler, 903-7; 1059-61). Discharges are no guide to a man's character and ability (Kenny, 1677-80). Discharge certificates are useless (Henson, 1735-6; Bennet, 1843-4; Carey, 1879-82). Present system has not worked well (Brown, 1937-61). Present system has completely broken down (Barclay, 808). Present system not valued by seamen (Chandler, 988-9). Discharges not to be depended on for procuring employment (Foley, 1553-60). Unfavourable discharges are suppressed under present system (Hooke, 127; Porteous, 405-11; Rees, 462-4; Foley, 1583-4; Brown, 1972-5). A bad discharge injures a seaman (Henson, 1751). Present form favours personation (Pritchard, 1249-56; Laws, 2195-7). Is easily obtained and not valued (Wilson, 1526-7). Seamen seldom apply to the Registrar General for copies of all their discharges but only for single voyages (Hooke, 104-109). Registrar General is bound to supply copies of reports of seamen's character although applicant only specifies certain voyages (Murton, 29-42).

**ECKELL, Mr., Summary of his Evidence (619-712).**

Is acting Vice-Consul in the Swedish and Norwegian Consulate-General in London, 619. Is familiar with British system of discharge, and proposes to give evidence as to Swedish system, 620-1. In Sweden a book for discharges is used which does not indicate the seaman's character, but simply records his service and rating, showing each voyage, 622-7. The books are issued in connection with the Swedish Seamen's Houses, which in some respects resemble the English Shipping Offices, 628. Such houses are under Government, and were established to forward the interests of shipping and seamen. Seamen are entitled to a pension when they retire from the service from old age, illness, or accident, &c., and he thinks that it was in this connection that the books were first given to seamen, and that they were not meant originally to be discharges in the ordinary sense, 629-31. When a seaman registers himself at a Seamen's House he gets his Discharge Book, and he pays out of his wages a certain small amount to that House, 632-3. At the end of his service he shews his book to the authorities of the Seamen's House, who award him a pension in accordance with the regulations, 634. But there is no obligation to register and obtain the book, although practically all do so; a man can be discharged without a book, 635-40. If a book is lost, a copy can be obtained, and if seaman deserts he forfeits his right to pension, 641. The books are in possession of captain of vessel during voyage and deserters' books are sent to Seamen's House, 642-4. No obligation on captain to give certificate of character, but it is commonly done, and printed forms for the purpose can be obtained at Seamen's Houses, 645-7. No demand has been made to have record of character included in book of discharges, 648. As regards rating the book simply tells what the seaman calls himself, 649-54. In Norway these discharge books are filled in with special reference to the Naval service, every seaman being liable to serve in the Navy; when a man first ships he gets a paper called a patent, and if, after a probationary period, he elects to follow the sea, he gets his book, 655. The patent contains a description of the man, and is issued for one voyage or for a certain limit of time; it expires automatically when the man is 22, and he becomes a member of the Royal Naval Reserve. No record is made of the man's capacity, rating, or character,

656-72. Possessing a discharge book, he is not liable to serve in the Army, and the book is an inducement to seamen to keep straight, 673-7. Books are seldom lost, and when they are, the seaman has to pay a fine for losing them, 678-81. Norwegians give certificates of character similar to Swedish captains, 682-7. Seamen's Houses are established in Sweden at each principal port, 688-91. In engaging men it is the custom for captains to ask the men to produce their books showing their record, 687-97. No obligation on captains to give certificates of character, but when given they may, as a rule, be regarded as correct, 698-701. The seaman's contribution to the Seamen's House is in proportion to his wages, and is deducted from his wages by the captain, who pays it over to the Seamen's House, 702-3. Thinks there is no pension scheme for civil life and ordinary employments in Sweden, 704; and that this scheme for seamen is similar to the old age pension system in Germany, 705-8. But it does not apply in Norway, 709. In Sweden the master is not compelled to give a certificate of discharge, but must sign his name in the book, 710-12.

FOLEY, Mr. J. E., Summary of his Evidence (1545-1674).

Is secretary of the Bootle and Liverpool branches of the National Sailors' and Firemen's Union, and has had 20 years' experience in engaging and discharging seamen at home and abroad, 1545-9. Left the sea 18 months ago, and has had experience as seaman, petty officer, quartermaster, boatswain, and boatswain's mate, 1550-2. Never could depend on the certificates of discharge now in use to obtain employment, but has always depended upon special testimonials, which are taken in preference and required when passing for Board of Trade certificates, 1553-60. Objects to present system because it is not a true record, masters giving discharges without due consideration, very often according to some whim of their own, 1561-5; and instances case where man was discharged as an A.B. after only one month's sea service, 1566-73; also case where after five voyages with "V.G." for conduct and ability in same ship with same master, a man received "Decline" for sixth voyage, simply because he acted as representative of the crew in putting a grievance before the master on that voyage, 1574-82. A seaman getting a bad discharge does not use it, but gets employment on his old discharge, 1583-4. Certificates of continuous discharge should be made compulsory, 1585-6; and should simply record a man's service, 1587-91; if he wanted a certificate as to his character it should be given to him either on the back of his discharge or as a separate document, but he should not be forced to take a certificate of discharge which contained a record of his character, 1592-4, 1647-57, 1660-4. Before getting a continuous discharge certificate a seaman should have proved his qualifications, 1595; before being engaged in a certain capacity he should produce some evidence that he is fit for that capacity, 1596-8. He knows that legislation would be required to effect this, 1599-1602. Thinks a compulsory continuous form of discharge would be a distinct improvement on the present system, 1603-6; it would prevent a lot of incompetent men getting to sea, as such men would not have old discharges to fall back upon, and the whole of the seaman's record would be in the hands of the captain or owner, and show what sort of man he is, 1607-12. He would not alter the "V.G." or "G." discharge for such description as "Moderate" or "Fair," 1613-6. The continuous discharge form should be given into custody of master at time of engagement and a record of that engagement entered at once, so that if the seaman deserted the book would show it; masters should not be allowed to engage men without books, 1617-23; except in the case of ordinary seamen, 1624-7. He would accept the legal discharges from foreign ships in the case of foreigners seeking employment in British ships, 1628-30. Thinks seamen should serve an apprenticeship, and a period of three years as ordinary seaman should qualify a man to become an A.B., 1631-46. If a seaman loses his discharge book he should pay a fee for a duplicate, 1658-9. Thinks that a proper tribunal should have power to suspend a seaman's continuous discharge certificate for certain offences, 1665-71. Some of these suggestions would involve legislation, but even under the present law a system of continuous discharges would be preferable to the existing system of separate discharges, 1672-4.

HALL, Captain WILLIAM, Summary of his Evidence (1072-1189):

Is a master mariner, and has had forty years sea service in steam and sail, 1072-3. Represents the Shipmasters' and Officers' Federation, comprising the Mercantile Marine Service Association, the British Shipmasters' and Officers' Protection Society, the Shipmasters' Society, and the Scottish Shipmasters' Association, 1074-7. The subject of continuous discharges has been discussed by these associations for many years, 1078-81, and is he sure that his views represent those of the Federation, 1082. Absolute unanimity exists that continuous discharges are desirable, 1083-5. The question has been considered from the general point of view, and it has been looked at from the seamen's point of view, for the Federation comprises a clear majority of employed certificated shipmasters and a fair proportion of employed mates, many of whom have risen from the ranks, 1086-8. Continuous discharges will prevent personation, which plays into the hands of the crimps, who often sell discharge certificates, 1089-92. Continuous discharge certificates should be given to masters when seaman signs on. This would prevent failure to join. If the man did not join, his certificate could be returned to the superintendent, who would decide whether or not the man should get it, 1093-7. The continuous form would be a protection to respectable seamen and firemen, and ought to be a deterrent to loafers and other bad characters, 1098-1100. In the case of deserters, the discharge would be handed over to the Consul or to the shipping office when vessel returned, or should be returned to the Registrar-General of Seamen through the British shipping authority at the first port, 1101, 1115. Advocates the system of continuous discharges in the interests of both masters and seamen, 1102-3. Is opposed to any legislation that might weaken the power and responsibility of masters, 1104-6. The form of continuous discharge should be such as could be easily glanced over by the master or mate when picking a crew. It should contain description of holder and columns not only for voyage, but also for conduct, ability, and remarks, 1107-8. In no case should the entry "Decline to Report" be allowed unless the offence upon which it is based is properly entered in the official log, but entries of desertion, mutiny, or other statutory offences should not be made, and superintendents of Mercantile Marine Offices should not be made responsible for entries of bad conduct, 1109-13, 1176, 1180. The column for "Remarks" should be solely used to record acts of gallantry or exceptionally meritorious conduct, 1114. It should be compulsory to record the seaman's conduct and ability at the end of a voyage, 1116-1118. The "V.G." discharge is often given. One should be able to trace a master who gives a false discharge, 1119-20. Does not think that one bad discharge in a series would positively stop a man from obtaining employment, as the man might be able to explain it, 1121-30, 1173. Would be satisfied if it was the custom to leave it optional with the seaman whether his character was stamped on the back of the certificate or not, 1131-5. The superintendent should enter the engagement in the discharge book, and also a record of a desertion, 1136-42. A "G." discharge is sometimes regarded as the same as bad, 1143-6. In the "Remarks" column entries should be made of anything specially meritorious, or in explanation of a doubtful report, 1147-51. The difficulty in getting a second book would most likely prevent books being sold to crimps, 1152-3. Invariably takes charge of the discharges of seamen sailing with him, and hands them back when nearing port of discharge, 1154-8. Thinks the discharge should contain a report on character, or it would be no guide; but was not aware that the seaman had the option of declining to have any such report made, and thinks that seamen do not know this, 1159-67. They should still retain that option, 1168. Thinks the case would be met by back of the form being left blank for record of character if the seaman wished it. If the character was not recorded, it might militate against the seaman, 1169-75. Thinks the Federation would instruct its members to demand the seaman's book at time of engagement. He did not know that the superintendent had no power to demand the last discharge. This being so, the scheme of continuous discharges would depend on co-operation of masters, which could be relied upon, 1181-4. Continuous discharges would lead to engagement of fewer substitutes, but thinks

that in an emergency a master might take a man without a book, 1185-9.

**HENSON, Mr. J., Summary of his Evidence (1731-1836).**

Is secretary to the Sailors' Union at Glasgow, a post he has held for about fifteen months; was secretary at West Hartlepool previously for about two years, and before that was at sea for twelve or thirteen years, 1731-4. Thinks present form of discharge is useless, and would prefer a certificate for each man, but would not object to a continuous form of discharge if it were made compulsory, 1735-6. There should be one form approved by the Board of Trade, 1737. Advocates system of rating, no man to be rated A.B. until he can show service as an ordinary seaman, or as fireman, unless he can show service as trimmer, 1738-40. A system of continuous discharges would be of great benefit to seamen, who would value their discharges more than at present, 1741-3, and of great advantage to masters, who are now careless in giving characters, 1744-9. Seamen would value continuous form of discharges as highly as they do the Naval Reserve certificate, 1750. A bad discharge often prevents a man getting an engagement, and handicaps him in going up for second mate's certificate, 1751. Would not object to the form of discharge being a certificate of character and ability, as well as a record of service, so long as a man could appeal against a bad discharge for character and ability, although that might require a little legislation, 1752-7. It might have a good effect if the continuous form of discharge was a simple record of service, leaving it to the seamen to have his character stated on the back of the form, or separately, as he pleased, or not at all, but thinks masters would give preference to seamen whose characters were recorded, 1758-64. Instances cases in which men have been given good and bad discharges wrongly, and thinks form of continuous discharge would be likely to remedy this, 1765-95. Personally he would prize the continuous discharge, but does not greatly prize the present form, 1796-9. A continuous system would have a good effect in steadying bad or doubtful seamen, and would lead to less desertions in Continental and American ports, 1800-1. Thinks it hard that in some employs only "G" certificates are given, for commonly it is taken to mean "bad" or "decline," and militates against a man getting employment, but he is not prepared to propose a substitute for "G," 1802-12, although he thinks seamen should have a right of appeal, 1813-21. Seamen would take greater care of continuous discharge in book form than of the present single sheets, and they would not object to produce the book, or to leave it in the hands of master during the voyage, 1822-7. Entry of engagement should be made at once, but if the continuous form is made compulsory he scarcely thinks the seamen's book should be in charge of master; after engagement it should be returned to shipping office to await vessel's return, or the man's return, 1828-33. Thinks a fee should be charged for supplying duplicate books, 1834-6.

**HOOKE, Mr. G. A., Summary of his Evidence (163-221):**

Is in the office of the Registrar-General of Seamen, 103. Seamen come to the office to get copies of lost discharges; they seldom apply for copies of all their discharges, but only for single voyages, 104-9. Is in favour of continuous discharges if they can be made practicable; they would be useful to shipowners if they contained a record of character, 110-17. A record of character is of some use, though it is true that under the present system unfavourable discharges are suppressed, 118-27. In 1729 seamen had to receive a discharge in writing, 131. In 1796 seamen trading to the West Indies were entitled to have a certificate of discharge on demand, 131, 132-3. In 1835 masters were compelled to give discharges specifying the seaman's service, but the form was optional, 145-6. In 1844 a statutory form was provided, 147. In 1850 it was left to the Board of Trade to provide the form, and the record of character was added, 148-9. The record of service was then on one half of the certificate, and the record of character on the other, 149-51. In 1869 discs were put on the back of the certificate for the record of character, 151-2. Then the character was put on the corner of the front of the certificate, so that it could be cut off, 153-161; the present form was introduced in 1890, 163-164. The register ticket, which was a means of identifying seamen, and had to

be produced on engagement, was introduced in 1844, and lasted till 1854, 134-6; in 1857 a form of continuous discharge was introduced; it was optional, and the single-sheet discharges continued to exist at the same time, 137-41. It cost 1s., was taken up well at first, but gave trouble to the superintendents, and was withdrawn at the end of eight years, 165-72. In 1885 another form containing no record of character was sent to the principal ports, 173-7. Very few were issued, 180; in 1863 cases were issued for holding discharges together, and were taken up largely, 178-9. Unless continuous certificates have to be produced at the beginning of the voyage they will not do much good, 183-9; they should be retained by the master during the voyage, 190-5; the continuous discharge should be the only form approved, 202-4. If a central register were kept of all continuous discharges, and of the entries in them, twelve additional clerks would be necessary. 205-12; a central register would be useful for other purposes, and might supersede the engagement books and the lists of deserters at the ports, 213-4. It would require legislation to make the production of the continuous discharges compulsory at the time of engagement, 217-8.

**KENNY, Mr. David J., Summary of his Evidence (1675-1730).**

Is secretary of the Birkenhead branch of the National Sailors', Firemen's and Fishermen's Union, and a member of the Birkenhead Town Council, 1675-6. Has had 12 years' experience at sea as seaman and petty officer, and 19 years' experience of the engagement and discharge of seamen at home and abroad; the present discharges are misleading and no guide to the real character and ability of the man, 1677-80. If a system of continuous discharges were introduced it should simply be a record of service and should be made compulsory, 1681-93, 1699-1700. It would be an improvement on present system, and would show the whole experience of the man who should qualify for his rating, 1694-8. Contends that a man should have some form of certificate to show that he is competent, 1701-7. A system of continuous discharge even under the present law would be an advantage, 1709. Approves of the growing practice of engineers giving special certificates of character to firemen, 1710-3. Continuous discharges should be in book form, similar to the Royal Naval Reserve books, 1714-5; and contain nothing on the face of the form as to character, which, at the option of the seaman, could be endorsed on the back of the form or left unrecorded, 1716-7. Seamen should present their books when being engaged, an entry of the engagement at once made, and the books handed over to the master, 1718-24. It would be a great improvement if masters and owners insisted on the production of the books, and would put a stop to many failures to join, 1725-6. In case of a book being lost the seaman should be charged a fee for a duplicate, 1727-9.

**LAWS, Mr. G. A., Summary of his Evidence (2078-2493):**

Is general manager of the Shipping Federation, which represents nine-tenths of our seagoing vessels, 2078-9. Gives evidence also on behalf of the Chamber of Shipping, 2080. Description of the Federation Registry and Benefit System, 2084. Seamen are not employed unless they have registry tickets or benefit books, 2085. Registry tickets are given after a probationary period of six months, 2086-7. The registry ticket entitles a man to demand a benefit book, 2088. Each voyage and the character for ability has to be entered in the book, 2090. The benefit depends on the book being redated, 2091-2. Only gross offences are entered in the book, 2093. There are 70,000 men with benefit books, 2095. Circumstances under which benefit books are suspended and forfeited, 2096-2102. Cost of the registry and benefit system, 2104-10. The men do not contribute, 2111-4. Circumstances under which the benefit books are renewed, 2115-6. Registers are kept at the central office, 2117-23. No record of service is entered on the register ticket, 2125-6. Character for ability only is entered in the benefit books, but there are special pages for conduct, 2127-42. Bad cases of misconduct are entered in the Royal Naval Reserve books, 2144-53. Steady men would prefer to have a record of conduct for each voyage, 2154. The federation only note cases of mutiny, desertion, or failure to join after cashing the advance note, 2155-9. In obtaining employment men who hold books have a preference over those who only

have tickets, 2162. The amount of the benefits have been recently practically doubled, 2165-71. Large number of seamen in shore employment, 2172. Many men say they would prefer sea employment if wages went up to 6*l.* a month, 2173-5. The federation considers a form of continuous discharge would be serviceable, with a column or pages for conduct, 2177. The entries as to conduct should be made by the Board of Trade officers, as masters do not always give true characters; the Board of Trade officers should have power to give character according to the entries in the official log, 2179-86. Case cited in which men got V.G. in spite of serious entries against them, 2188. If the character is inconsistent with entries in the log, the superintendent should have power to alter it, 2190-1. Trouble on board is caused chiefly by the firemen, 2192-3. Inducements to good conduct should be given in the shape of superior ratings, 2194. The present discharges offer facilities for personation, 2195-7. Continuous discharges would minimise these facilities, 2198-2200. The continuous discharges should be worked in connection with a registry system, 2201. The master should hold the certificates during the voyage, 2202. The certificates of deserters should be returned to the Registrar-General of Seamen, 2203. Persistent deserters should have their books forfeited, 2205; or should undergo a period of compulsory naval service, 2206. Masters should have to prove alleged desertions, 2207-8. Masters should record character truly, and leave to superintendents the responsibility of giving V.G. or D, 2209-11. Bad character should not be entered unless a man has been logged, 2212. A record for sobriety should not be compulsory, 2213; but inducements should be given to men to have such records, 2214. Conduct, ability, and sobriety are mentioned in the Australian and New Zealand continuous discharges, 2215. Opinion of Captain Beechey in 1852 as to the value of a register ticket and record of character, 2219. Shipowners are certain that continuous discharges would be an improvement, 2220; because there will be less possibility of personation, &c., 2221. The form should be the only one approved by the Board of Trade, and should be in book form, 2221. The substitution of discharge certificates for the old register ticket introduced an important change in principle, 2223-8. There has been a demand for continuous certificates, and they have been recommended by Commissions, 2229. Attempts have been made to meet the demand, 2230. The continuous discharge of 1884 was unknown to shipowners, 2231. Does not agree with Mr. Gray's opinion as to probable failure of continuous certificates, because the good men will be in favour of them, 2232. Seamen of loose character will resent the continuous certificates, 2233. It is just that a good seaman should be able to put himself on a higher level, 2234. Doubts whether higher ratings could not be given to good seamen, 2235-6. Men have to prove their rating on federation ships, but are not required to do so on others, 2238-9. The object of the federation is to encourage steady men, and secure sufficient number of qualified men, 2242. Men employed in federation ships must understand English, and A.B's. must prove their rating, 2243-52; but men should not be prevented from going to sea because they had not got a continuous discharge, though the continuous discharge should be the only one approved, 2253-2261. Section 126 means that men are not entitled to demand the rating of A.B. unless they have had four years service, 2261-71. Men are not given ratings which they do not deserve to any large extent, 2272-4. Certificates should not be given to petty officers unless they are made liable to be dealt with, 2275-9. The character spaces on the continuous certificates should never be left blank, 2280. Superintendents should not allow masters to give V.G. to men who have been logged, 2281. Masters should not be allowed to condone really serious offences, 2282-92. Superintendent should be responsible for seeing the man gets the proper character, 2293-6. Deserters should be punished by compulsory Naval Service rather than by imprisonment, 2297-2302. It is possible to have a continuous record for a lifetime on a single document, 2303. The continuous discharge should provide for the endorsement on it of the report of character, 2304. Superintendent should settle disputes about character and see that the truth is always recorded, 2305. Seamen can refuse to have character endorsed, 2306. Ability is recorded in the federation book with the man's consent, 2307. If inducements are not given the present lax system will not be improved, 2308. It is worth 50,000*l.* of the country's money to introduce continuous certificates on which

character could be recorded, 2309-10. Shipowners did not know the continuous certificate of 1884 existed, 2311. The Naval Reserve book would be the better model, 2312. A fair experiment could be made if the continuous certificate were the only form, 2313-4. It is unlikely that the continuous certificates will be misused by crimps, &c., 2315-23. There is no record of conduct in federation books because the official discharge does not always give a true record of conduct, 2323-39. A register is kept of the number of federation tickets issued, 2340-5. Paper tickets are renewed gratis, 2346. 70,000 benefit books, and 180,000 tickets have been issued, 2347-8. The cost of keeping the register of the benefit books, 2349-50. A register of continuous discharges could easily be established, 2351-2. Continuous discharges would be of great value, even though there is no power to require their production on engagement, 2353-7. Men could not get two books if superintendents insisted on proof of rating, 2358-60. The superintendent has power to demand proof of rating, 2361-66. If the system is properly carried out men cannot get two books, 2367-70. In time all men would have to have books if they wanted constant employment, 2371-4. Shipowners would oppose legislation which insisted on every man, under all circumstances, having a book, 2375-8. But with firmness everyone, including substitutes, will have books, 2379-81. Even if imperfect, a continuous system would be most valuable, 2382-3. The superintendents should certainly demand proof of rating, 2384-97. The federation and the large companies would support such action except in times of stress, 2398-2401. The inducements to seamen, in the shape of higher ratings, could be enforced without legislation, 2402-14. There are differences of opinion as to a superintendent's power with regard to rating, 2415-9. A continuous form places more obstacles in the way of crimps and bad seamen than the single-sheet form, 2421-5. Seamen should be pressed to have their character entered on the continuous discharge, 2426. It could be endorsed, 2427-32. If a master gives a character not in accordance with the facts, the superintendent should intervene, 2435-43. Continuous certificates can be introduced without legislation, 2444-5. The books should be retained by the master, 2446; and sent back if the man does not join, 2447. Superintendents should call attention of masters to habitual deserters, 2448-52. Continuous certificates should be liable to cancellation, 2451-7. Further explanation of the federation system of registry, 2458-92. Continuous discharges should be adopted, because when each man has one certificate, pressure can be put on seamen to become steady, 2492.

MASTERS, views of, on continuous discharges, *see* BARCLAY, CHANDLER, HALL, CARRINGTON, PRITCHARD, and BULKELEY.

MURTON, Mr. W., C.B., Summary of his Evidence (1-49).

Advises that, under Section 129 of the Merchant Shipping Act, 1894, the option of having a copy of the report of his character, or of having it endorsed on his discharge certificate, rests with the seaman, 1-5. The certificate of discharge is a record of service, pure and simple, and is a document quite distinct from the report of character, 6-17. The seaman has the option of having a copy of the report of his character on a separate form, but in practice he can only have it endorsed on his certificate of discharge, 18-21. The seaman only has this option when discharged before a superintendent, 22-25. The superintendent is put in motion by the seaman, and his action is governed by the wishes of the seaman, 21. If a seaman applies to the Registrar General of Seamen for copies of reports of his character for certain voyages only, the registrar is bound to give what he asks for, though he can of course indicate that the record is not a complete one, 29-42. Under the present law the certificate of discharge does not contain any record of character at all; it is a document of which the sailor has the custody, 42. It would require legislation to enforce the inclusion on the certificate of discharge of a record of a seaman's ability and character, 45-47. Continuous discharges could be limited to certain classes of seamen, as long as Section 128 is complied with, 48-49.

MUSKERRY, Lord Summary of his Evidence (890-902).

Has brought the subject of continuous discharges twice before the House of Lords, 821; was in Navy, yachts, and takes deep interest in the subject, 822-4; has had suggestions from masters and others, 825.

The continuous form should be compulsory, *i.e.*, it should be the only form approved, 826-8. It would be valued, and personation could be made difficult, 829; the certificate should include conduct, 830. The object of having continuous certificates is to get good seamen, and enable masters to judge of the men; the feeling of masters is strongly in favour of a continuous certificate, 834. Masters would seldom give bad characters unfairly, 835. Does not see the object of having two books, one for service, and another for character, 836. Bad seamen would no doubt object to a compulsory record of character, 840-1. If the records of service and character were separate, the non-production of the character record would be equivalent to a bad character, 842-3. A compulsory record of service would be to some extent an advantage, 847-9. If there were two books and the conduct was not always entered in the conduct book, the service book would still be valuable, 851-5. Masters would value a continuous record, 856; the usefulness of such a record depends upon masters, 857-9; they will take trouble to give proper records of character, 860. Would prefer record of service and character in one book, but if necessary to avoid legislation, there might be two books, 862. Endorsements as to character might be put on the back of the service record, 863; the absence of endorsement would then show what the man was, 864. Rating should be left to the master, 865-9. The characters "V.G.," "G.," and "D.," should be left as at present, 870. The continuous discharge books should be produced at the time of engagement, and an entry then made, 871-6. Some record should be kept by the superintendent of the books and of the entries, 877-9. Masters will keep the books during the voyage, 880; and in case of men deserting abroad should return the books to the superintendent, either direct or through the consul, 881-7. A total absence of character record would tell against a man, but one or two blanks in the record should not, 888-9. Masters would assist a system of continuous discharges, 890. If the master has to ship a man at the last moment without a book, he must give him a book at the end of the voyage, 891-4. Deserters might be traced if there were a central register, 895-6. Continuous discharges are much needed, and masters should be required to give true characters, 897. If a seaman need not have his character entered on the discharge, there need be no appeal when the seaman thinks the master has given him a wrong character, 898-901. A continuous and compulsory record of service by itself would be useful, 902.

PORTEOUS, Mr. T., Summary of his Evidence (386-459).

Is superintendent of the Mercantile Marine Office, Victoria Docks, and has served under the Board of Trade since 1863, 386-7. Victoria Docks differs from other offices in that discharges are not made out there but on board ship, 388-96; most of the vessels doing business at the office are liners, 397-8. Seamen never demand their record of character on a separate sheet, and do not know they are entitled to it, or that they need not have their character endorsed on their discharge, 399-404. Seamen getting bad characters tear up the discharges, 405-411. Officers of the liners scrutinise the men's discharges when selecting their crew, 412-17; the character of the men at the Victoria Docks office is generally good, 418-19. Has received an account of the continuous discharge certificates at Bombay from Mr. Walker, the late shipping master, 420; description of this system, 421-27; the system is rather too high-handed to be applied to English sailors, 428-9. Continuous discharges might be tried in this country, 430; they should show character as well as service, 431-3; but the seaman should still have the option of not having his character endorsed on the certificate, 434-5; the backs of the pages of the continuous certificate might be left blank for this purpose, 436. Careful masters do not decline to take a man because he has one bad mark against him, 437-440. The continuous discharges should be retained by the master during the voyage, 443-9; a man who loses his continuous discharge should be able to get a copy, 450. Is in favour of continuous discharges, 453; they are not impracticable, 454; and would not materially increase the work of the Victoria Docks Office, 455; the work would be increased if copies of the discharges had to be kept, 456-8.

PRITCHARD, Capt. W. Kenneth, Summary of his Evidence (1245-1302).

Has been connected with the sea for about 25 years and has been a master about 13 years, 1245-6. Is a member of the Shipmasters' Society but appears to give evidence independently, 1247. Is in favour of continuous discharges, 1248. Present system favours personation; almost every time a crew is engaged by him he has reason to doubt the genuineness of some of the discharges, 1249-54. Thinks bogus discharges often belong to foreigners who have left them with boarding house masters on going home to their own country, 1255-6. Foreign seamen are steadiest, but masters seldom give bad discharges on account of the trouble involved, 1257-9. Under a continuous system the seamen would not be so ready to part with his book, and masters would be more careful in giving a just and accurate discharge for conduct and ability, 1260-65. The continuous discharge should be in a strong handy book form showing a record of conduct and ability, but the seaman should still be allowed the option of refusing to have his character stated, as at present; the point might be met by the front of the discharge simply showing a record of service, and the back left blank for a record of conduct and ability if the seaman wished it, 1266-78. When a man had been signed on, his book should remain in the possession of the master. If he failed to join it should be returned to the Superintendent, and if he deserted abroad to the Consul, 1279-86. When engaging men he insists on production of discharges, and would still do so if continuous form were adopted and thinks masters generally would do so. In the tramp service they have the rougher class of seamen to deal with, 1287-93. Whenever possible he would insist on the production of the book when engaging substitutes, 1294-5. A bad discharge should not be given unless justified by entries in the log, 1296-1302.

RATING.—Under present system men get ratings they do not deserve (Wilson, 1419-24). Case where a man was discharged as A.B. after one month's sea service (Foley, 1566-73). Men are not given ratings which they do not deserve to any large extent (Laws, 2272-4). Some compulsory provision as to rating should accompany compulsory discharges (Chandler, 1053-6). A man should have some form of certificate to show he is competent (Kenny, 1695-8). Men should be required to prove their ratings (Henson, 1738-40); men should prove rating before getting continuous certificates (Foley, 1595-8). Three years as O.S. should qualify a man for the rating A.B. (Foley, 1631-46). Seamen on Federation ships have to prove their rating (Laws, 2238-9, 2243-52); proof of rating would greatly prevent crimping from foreign ships (Wilson, 1483). Superintendents have power to demand proof of rating (Laws 2361-6); superintendents can refuse to sign on a man as A.B. unless he can show four years' service at sea (Wilson, 1528-32); the superintendents should certainly demand proof of rating (Laws, 2384-2401). Men are not entitled under the present law to demand the rating of A.B. unless they have had four years' service (Laws, 2263-71). There are differences of opinion as to a superintendent's power with regard to rating (Laws, 2415-9). The continuous discharge might be used as a certificate of rating (Carey, 1897-9). Continuous discharges would prove a man's title to his rating (Rees, 465-9). A rating Bill would be an interference with freedom and would place additional power in hands of agitators (Beazley, 1397-1404). Rating will possibly be compulsory if continuous discharges are adopted (Beazley, 1388-96). Superior ratings should be given as inducements to good conduct; they can be given without fresh legislation (Laws, 2194, 2235-6, 2403-14).

REES, Mr. J. T. Summary of his Evidence (460-568).

Is superintendent of the Mercantile Marine Office at North Shields, 460. The present system of discharges is unsatisfactory, as unfavourable certificates are destroyed, 462-4. Continuous certificates would be an advantage, 465; they would prove a man's title to his rating, 466-9; it would prove his services for Royal Naval Reserve purposes, 470; it would however be more difficult to replace if it was lost, 470-8. The continuous discharge should contain the man's character, 480; but the seaman should have the option of not having it entered because if a man got a bad

discharge for an insufficient reason, it might make it difficult for him to get a ship, 481-502; masters could demand explanations when there were blanks in the certificate, 503-507. It would not be unpopular if seamen were forced to have their characters on their discharge certificates, because the good seamen are the majority, 508-9; it is true that "V.G." characters are given very loosely, 510-13. The seamen should have the option of refusing to have any character at all, but if one is given it should be on the discharge, not on a separate document, 514-528. Continuous discharges would not much increase the work at his office, if the books are sent to the office beforehand, 529-32; a circular to masters would induce them to do this, 536-7. There would be no difficulty in getting the books produced at the time of engagement, 539; on the Tyne the discharges are usually returned to the men when articles are signed, 540; continuous discharges should be retained by the master, 541; unclaimed discharges are kept at the office till claimed, 543. Continuous discharges should be numbered, but, even if a central register be established, the port engagement book should be retained, 544-9. Seamen never ask for a copy of the report on their character on a separate sheet, 520, 550-2; the character is put on the discharge as a matter of course, 553-4. It would be useful if the continuous discharge were simply a record of service, and the man's character could be put on the back, 555; masters would not examine the record of service to see if there were any blanks, 556-61. "G." is sometimes given instead of "V.G.", 565; "G." should be the highest given, 566. Continuous discharges should be given to the whole of the crew, 567-8. Is in favour of introducing continuous discharges, sees no insuperable difficulties in the way, and does not think it would materially increase the work of the office, 534.

**SAILORS and FIREMEN**, views of, on continuous discharges, *see* WILSON, FOLEY, KENNY, HENSON, BENNET, CAREY and BROWN.

**SHAW, Mr. F.** Summary of his Evidence (222-385) :

Is superintendent of the Mercantile Marine Office at Cardiff, 222. At present discharges are prepared immediately before the discharge of the crew, 223; they are prepared from the agreement and log, 224-6; the man's character is entered in the log before it comes to the superintendent, 227-8. The seaman has no voice as to the kind of character he is to get, 229, and does not know beforehand what the character is to be, 230-1. The certificates of discharge are prepared by a clerk or deputy, 232, and simply require the signature of the seaman and of the master, 233-5. The master signs them all at once, generally before discharging the crew begins, 236; the discharge is also signed by the superintendent, 237. Amount of extra work caused by continuous discharges would depend upon whether the books were handed in beforehand or not, 238. The Federation benefit books are not nearly so numerous as continuous discharges would be, 239-48. Continuous discharges would cause delay, if they were not brought to the office beforehand 249-51. It would in any case take longer to fill up the books than the separate sheet discharges, but not very much longer, 252-65. Continuous discharges would entail more work and involve some additions to the staff, 265. When men are shipped the master usually retains the previous discharges, or the last one, 266-9. The covers for discharges are used by about a third of the men shipped at Cardiff, 269-72. Masters retain discharges to prevent desertion, and return them towards the end of the voyage, 273-6. When men do not join, the masters occasionally send back the discharges with the list of changes in the crew, 277-285. Sometimes masters bring a handful of unclaimed discharges at the end of the voyage, 286. The superintendent would hand a discharge to its owner, even though he had not joined his ship, 287-8. The black list of men who have failed to join is not shown to masters unless they ask for it, 289-90. Thinks continuous discharges impracticable; previous attempts have failed; and the documents become dirty and get lost, 291-4; men could get two or three discharges, but this difficulty would decrease with time, 296-305. It would be unfair that a man should have a bad character endorsed on the discharge and be bound to produce it, 306-15; especially as men sometimes get a bad character for a petty offence, 316-19; they also get good characters when they should

not, 320-5; a superintendent cannot prevent this, he can only refuse to sign the discharge, 326-30. In engaging a crew a master looks more to the men's appearance than their discharges, 331-4. A man with a long period of good service would possibly stand a better chance of engagement than another, 336-9. Continuous discharges are good in theory, but impracticable; previous attempts have failed; the cover for discharges is fairly successful, but it is not a continuous discharge, 340-8; if a continuous discharge were the only form approved by the Board of Trade, it would be bound to come into general use, 349-50. It is unfair to make the seaman produce an unsatisfactory report on his character, 351; this objection would be met if the seaman received a copy of the report on his character on a separate sheet, which he is entitled to demand under the present law, 352-66. If the continuous discharges simply recorded service, there would be a difficulty at the outset, 369-73. Character could be recorded on the back of the pages of the continuous discharge, 374-5. The books should be numbered, 379; they should contain the man's description, 380; the entry showing the engagement could be made at the time of engagement if the master made the men produce their books, 381-5.

**SHIPOWNERS**, views of, on continuous discharge certificates, *see* BEAZLEY and LAWS.

**SHIPPING FEDERATION**.—Description of the federation registry and benefit system, and views of the federation on continuous discharges, *see* LAWS.

**SMITH, Mr. A.**, Summary of his Evidence (569-618) :

Has been 20 years in the service of the Board of Trade at Dundee, 569. The use of continuous certificates would simplify the clerical work, if half the work was done on engagement and half on discharge, as the man's name, &c., would be entered once for all, 571-2. At Dundee discharges are filled in at the Mercantile Marine Office, 573. No seaman has ever asked for his character on a separate document, 574, 577; the seamen do not know they can demand it, 578. A continuous record in book form would be a good thing, 580; there is no objection to a seaman having his character on a separate sheet if he wants it, 581-2. It is more common for masters to give too good a character than an unjustly bad one, 583-4. The general practice is to give "V.G.," "G." is considered a bad character, 583-8. Is in favour of introducing continuous discharges, and sees no insuperable difficulties in administering them, 589. The continuous discharge should be the only one, 590; the character should be recorded on the back, but the seaman should have the option of omitting a bad character, 591-4. Seamen are not asked whether they want their character recorded on their discharge certificates, 595-6. It would meet the case if the back of the certificate were left blank for the record of character, 597. Seamen should be asked if they wish their character recorded, 598-601. Continuous discharges would lessen clerical labour if masters would bring the books to the shipping offices, 604-8. The certificate should be called certificate of service, 609. Seamen would take a pride in their books, 610. It is too late now to abolish the "V.G.," 611. The system of continuous discharges should not be retrospective, 612. Six months' notice before introducing the new system would be enough, 613-4.

**WILSON, Mr. J. H., M.P.**, Summary of his Evidence (1419-1544) :

The present discharges give masters no idea of the character of the men, and is unsatisfactory to the men, because incompetent men get V.G. discharges, showing ratings which they do not deserve. These men compete with the others, and the others have to do their work, 1419-24. No green hand can deserve a V.G. for ability his first voyage, 1425-8. Inefficient cooks are a great source of trouble, and under a proper system of discharges they could not be shipped, 1429. The present discharge is no guide whatever as to a man's capacity, 1430-4. Bad men seldom get bad discharges, because the master wants to avoid trouble, and good men sometimes get bad discharges through

spite, 1435-6. Seamen do not know that they can refuse to have their character put on their discharges, 1437. The way to prevent false discharges is to have no character on them at all, 1439. Giving characters does not maintain discipline, because men tear up bad discharges, 1440. Compulsory characters are not given in other trades, 1441. Would not object to letters of recommendation being given, 1442-3; nor to characters being put on the discharges if the seamen wished, 1444-5; but the bulk of the men would not bother about it, 1449. Objects to "field days," 1450-1. Continuous discharges will not be satisfactory unless they are compulsory, 1452. There will be no difficulty with "pier-head jumpers," who usually have discharges, 1458-9. And men would not lose their books if the system was properly enforced, 1460. Beginners, too, would have to begin at the bottom, 1462-3. When ships have to engage men in a hurry, and there is a crush of men, a good selection cannot be made; this would be easier if continuous discharges were compulsory, 1464-71. Compulsion means not allowing men to ship without continuous discharges, 1472. Unless there is this kind of compulsion, the scheme will soon fail, 1473-7. If men are not allowed to sign on without books, they will soon get them, 1478. Deserters should have books when they come back, though it is not suggested that they should not be punished for deserting, 1479-81. Continuous discharges should only be given to those who know English, 1482, 1484-5. A continuous discharge book and a proof of rating would stop a lot of crimping from foreign ships, 1483. If a record of character or conduct, or ability is to be inserted compulsorily on continuous discharges, seamen should be able to appeal to some summary marine court of appeal. This would prevent unjust characters being given. If the character is not compulsory this is not needed. Witness does not set much store by such courts, but suggests them in order to meet the views of those who want more means of enforcing discipline on board ship, 1488-1501. The number of deserters, or what are called deserters, is very large, 1502-5. "G" is considered a bad discharge, though there are some lines which never give anything higher, 1506-8. The

continuous discharge should be in book form, 1509. Would prefer not to have the character on the certificate at all; if a man wanted a reference he should get a separate written one from the master, 1510-14. If a continuous discharge is adopted it should be compulsory, but without any entry of character or conduct; if it is compulsory, it will be practically a certificate of character, 1515. The book form should be the only form approved by the Board of Trade, 1516. If seamen need not have a character on their discharges, very few will bother about it, 1517. Would be quite satisfied if back of certificate is left blank so that seaman can have character recorded if he wants it, 1518. If masters are instructed to require the discharge books on engagement, it will not do as well as if the discharge is made compulsory by legislation; it will not work unless it is compulsory; in a short time many men will be without books, 1519-25. The present discharges are easily obtained and are not valued; a mere continuous form would not be any better, 1526-7. If a continuous form is the only official one, and the engagement has to be entered on it at the time of engagement, this would make the form compulsory to some extent, but how could books be given to men who had not been to sea before? 1528. Superintendents can decline to sign on a man as A.B. unless he can show four years' service at sea, 1528-32. If a man deserts abroad his discharge book should be sent to a Consul or brought to a Mercantile Marine Office, 1534. The entry of desertion in a book would not prevent a man shipping, because officers have not time to scrutinise the discharges, and would not object to a man because he had always deserted, 1536-8. Continuous discharges will not be much use, but if there is to be a change, they are preferable to the present discharges unless these are simply records of service, 1539. If the present discharges are superseded by a continuous form, and seamen have the option as to their character being entered on it, this will be some relief to seamen, but it will not do much good without legislation, 1541-2. From the point of view of seamen it is scarcely worth while to disturb the existing state of things for so small a change, 1543-4.

# R E T U R N

OF ALL

BRITISH SHIPS ordered by the BOARD OF TRADE, or its OFFICERS, during the period from 1st JULY 1899 to 30th JUNE 1900, to be PROVISIONALLY DETAINED as UNSAFE by reason of the DEFECTIVE CONDITION of their HULLS, EQUIPMENTS, or MACHINERY, or by reason of OVERLOADING or IMPROPER LOADING, in pursuance of the provisions of Section 459 of the Merchant Shipping Act 1894, giving the NAMES of the OWNERS of those SHIPS which have been dismantled, broken up, or converted into hulks, &c. ;

ALSO OF ALL

FOREIGN SHIPS ordered to be PROVISIONALLY DETAINED during the same period as UNSAFE by reason of OVERLOADING or IMPROPER LOADING, in pursuance of the provisions of Section 462 of the same Act ;

TOGETHER WITH

## S U M M A R I E S,

SHOWING respectively the TOTAL NUMBER of SHIPS ORDERED TO BE DETAINED as UNSAFE from 1st JULY 1899 to 30th JUNE 1900, and since the 1st OCTOBER 1876, distinguishing between those Cases in which the SHIPS were found SAFE, or UNSAFE.

*(In continuation of Parliamentary Paper [C.—9427].)*

---

Presented to both Houses of Parliament by Command of Her Majesty.

## NOTE.

---

IN March 1899 the Board of Trade forwarded a proof copy of revised regulations for the examination of engineers in the Mercantile Marine to certain associations of shipowners and engineers, asking them for their observations on the proposed regulations.

The following correspondence consists of the Circular Letter of the Board of Trade, with the replies received thereto, together with letters from certain associations which were not directly consulted. The date of the last letter is 17th May 1900.

(1.)

### CIRCULAR LETTER FROM THE BOARD OF TRADE TO CERTAIN ASSOCIATIONS OF SHIPOWNERS AND ENGINEERS.

Board of Trade, Marine Department,  
7, Whitehall Gardens, London, S.W.,

11 March 1899.

SIR,

I AM directed by the Board of Trade to transmit to you the enclosed proof of revised regulations which have been prepared with regard to the examinations of engineers in the Mercantile Marine. A note of the principal points\* in which this draft differs from previous issues will be found on page 3 of the print, and copies of the existing regulations are enclosed herewith for purposes of reference.

Before issuing this revised edition, the Board would feel much obliged if your Association would be good enough to favour them with any observations which may occur to them with regard to it.

I am, &c.,  
(Signed) INGRAM B. WALKER.

Institution of Mechanical Engineers, Storeys Gate, S.W.

Institute of Marine Engineers, 58, Romford Road, Stratford, E.

Institution of Naval Architects, 5, Adelphi Terrace, Strand, W.C.

Liverpool Engineering Society, Royal Institution, Colquitt Street, Liverpool.

---

---

\* The chief points in which the draft regulations differed from those now in force were as regards the service of candidates for examination. It was provided that candidates for second class must have served as apprentice engineers for five years instead of three years; three years of the five must have been spent in fitting or erecting; no service in drawing office or boiler yard would count for more than 12 months; time spent in technical schools might be accepted under certain conditions; all applicants to produce testimonials of ability as an engineer workman. The sea service required could not be performed in vessels with engines of less than 66 N.H.P. Sea service alone would no longer qualify a candidate for examination.

(3.)

NORTH EAST COAST INSTITUTION OF ENGINEERS AND SHIPBUILDERS  
TO THE BOARD OF TRADE.

4, St. Nicholas Buildings West,  
Newcastle-upon-Tyne,

DEAR SIR,

12 April 1899.

IN reply to your favour dated March 11th, 1899, I am directed to inform you that the Council of this Institution has duly considered the revised regulations with regard to the examination of engineers in the Mercantile Marine, and to put before you the following recommendations:—

1. "That if three years be served in the fitting and erecting departments of a marine engine works, and other two years are spent in any other departments of these works, or in a recognised technical college or school, that the five years thus served shall be considered sufficient."
2. "That the time spent in service in a marine engine repairing works, or other works in which steam engines are made, shall be placed on the same basis."
3. (See page 18, par. 38.) "That the restrictions as to service in a deep-sea fishing boat or trawler should be deleted; and that such service should count the same as in a coaster."

I am, &c.,  
(Signed) JOHN DUCKITT,  
Secretary.

The Assistant Secretary,  
Marine Department,  
Board of Trade, London.

(4.)

GENERAL SHIPOWNERS' SOCIETY TO THE BOARD OF TRADE.

General Shipowners' Society,  
London, 5, Whittington Avenue,  
Leadenhall Street, E.C.,

SIR,

28 April 1899.

I BEG to inform you that the attention of the Committee of this Society has been called to the fact that the Board of Trade are proposing to issue amended regulations regarding the examination of engineers in the Mercantile Marine, and that under these new regulations it is, *inter alia*, proposed (see note on page 3 of the proposed regulations) that—

"Candidates for second class must serve as apprentice engineers for five years instead of three years; three years of the five must be spent in fitting or erecting; no service in drawing office or boiler yard will count for more than 12 months; time spent in technical schools may be accepted under certain conditions; all applicants to produce testimonials of ability as an engineer workman. The sea service required cannot be performed in vessels with engines of less than 66 N.H.P. Sea service alone will no longer qualify a candidate for examination."

I am directed to state to you that the proposed changes as above stated have been carefully considered by the Committee of this Society, and they have instructed me to strongly urge upon the Board of Trade that the proposed alterations in the regulations as above set forth are most undesirable, and to express their earnest hope that they will not be carried into effect.

In support of this request, I am instructed to inform you that the experience of my Committee has been that the engineers on board merchant ships are now better educated than they formerly were; that they are quite capable of adapting themselves to any work required, and that they are fully competent to manage the whole of the machinery under their charge. My Committee have had no difficulty in obtaining adequately qualified engineers under the existing regulations, and, consequently, they see no necessity for extending the period of apprenticeship, as is proposed by the new regulations, from three years to five years.

My Committee strongly disapprove of the proposed change in the regulations to the effect that "sea service alone will no longer qualify candidates for examination," for in their judgment practical service at sea is the most valuable

qualification which a candidate for an engineer's certificate in a sea-going vessel can have. It is well known to the heads of engineering firms, as is stated to you in the letter of Messrs. C. S. Swan and Hunter, of Newcastle-on-Tyne, of 16th September 1895, "that those who serve a five years', or longer, apprenticeship in the engine shops may have learned very little, as the greater part of their time may have been spent in one department of the works at a lathe or other machine." The same firm, in the same letter, also remark that they "see no reason why a considerable part of the necessary experience and knowledge to be gained before a certificate is granted should not be obtained in actual service at sea in the engine room, quite as well as, or better than, in the engine shops."

My Committee further instruct me to state to you that they are of opinion that the effect—whether it be deliberately intended or not—of the new regulations, both in the extension of the time of apprenticeship and in the increased stringency of the examinations, will be to gradually and artificially restrict the number of certificated engineers available for the Mercantile Marine. Considering that practically nothing but steam vessels are now being built in this country, and that at no distant date the entire Mercantile Marine of Great Britain will practically consist of steam vessels, this is a prospect which my Committee cannot but regard as being very grave.

My Committee are also strongly of opinion that sweeping changes such as those proposed in the new regulations should not be made unless an adequate necessity for them is first proved. So far, however, as my Committee are aware, no such adequate necessity has, up to the present, been shown to exist.

My Committee earnestly trust that, before the new regulations are formally promulgated by the Board of Trade, this most important question of the proposed extension of the period of apprenticeship of marine engineers from three to five years will be carefully reconsidered by the Board of Trade.

I am, &c.,  
(Signed) W. H. COOKE,  
Secretary.

The Assistant Secretary,  
Marine Department,  
Board of Trade, S.W.

(5.)

#### LIVERPOOL SHIPOWNERS' ASSOCIATION TO THE BOARD OF TRADE.

Shipowners' Association,  
18, Water Street, Liverpool,  
2 May 1899.

SIR,

We are directed by the Committee of this Association to address you with reference to the new regulations which they understand it is proposed to issue relating to the examination of engineers in the Mercantile Marine.

By these regulations it is proposed that candidates for the second class must serve as apprentice engineers for five years, instead of three years, as at present.

Our Committee respectfully submit that to extend the period of apprenticeship as proposed would be a mistake. Their experience is, that under the present regulations apprenticeship for three years produces duly qualified men; and the effect of extending the period of apprenticeship would be to restrict the number of engineers who are available for the vessels owned by members of this Association. A larger proportion of these is every year propelled by steam. This experience only indicates what is going on rapidly throughout this country, and there is little doubt that in the course of another generation a far larger number of steamers than at present will be afloat. It follows, therefore, that there will be a larger demand than at present for services of engineers, and the proposed action of your Board will, by restricting their number, place difficulties in the way of shipowners obtaining desirable men.

By the proposed regulations it is also provided that sea service alone will not qualify a candidate for examination. Our Committee submit that this

also is a mistake, being of opinion that practical experience on board a ship is the best training which a youth can have to qualify as an engineer.

Our Committee beg that your Board will reconsider the two points to which we have called attention before issuing the proposed regulations.

We remain, &c.,

(Signed) WEIGHTMAN, PEDDER & Co.

Secretaries.

The Assistant Secretary,  
Marine Department,  
Board of Trade, London, S.W.

(6.)

THE HARTLEPOOLS SHIPOWNERS' SOCIETY TO THE BOARD OF TRADE.

The Hartlepoons Shipowners' Society,  
West Hartlepool, 3 May 1899.

SIR, Regulations *re* Examination of Engineers.

THE new regulations issued by the Board of Trade with regard to the examination of engineers, as also a copy of letter from the London General Shipowners' Society to you on the same subject, were duly considered at a meeting of the members of the above Society, held this morning.

I am directed to inform you that this Society is in perfect accord with the London General Shipowners' Society in its objections to the proposed regulations, and to express the hope that the Board will amend the rules on the lines suggested before giving effect to the same.

Yours, &c.,

(Signed) F. YEOMAN,  
Secretary.

The Assistant Secretary,  
Marine Department,  
Board of Trade, S.W.

(7.)

CARDIFF INCORPORATED SHIPOWNERS' ASSOCIATION TO THE BOARD OF TRADE.

Cardiff Incorporated Shipowners' Association,  
Cardiff, 3 May 1899.

SIR,

At a meeting of the Cardiff Shipowners' Association (which comprises the shipowners of the Bristol Channel) a pamphlet containing the proposed amended regulation for the examination of marine engineers was submitted and referred to a Committee.

In pursuance of the decision arrived at by the Committee, I have been instructed to call your special attention to clause 22, under which it is proposed, after January 1st, 1904, to alter the regulation for examination of second engineers, whereby candidates will be compelled to have served as apprentice engineers for five years, instead of three, and sea service will not count.

My Association strongly object to the proposed new clause, and venture to hope that it will not be enforced.

Many of the members are connected with the engineering trade, and it is well within their knowledge that engineering apprentices may serve the full five years and still be unfitted for sea service as second engineers, it being now often the case that apprentices spend the whole of their time in one department.

In our opinion it is most essential that a practical experience of sea service should in all cases be a qualification of marine engineers' certificates, otherwise it is feared that the lack of this necessary knowledge will be a source not only of inconvenience, expense, and delay, but perhaps of danger, to our vessels.

My Association would point out that if the necessity for the proposed alterations could be shown to be of advantage to seamen and shipowners, or to the safety of navigation, they would be the last to object. However, inasmuch as after full consideration they find the new regulations will only mean restricting the number of certificated engineers available, without a corresponding advantage attached thereto, but rather tending to render the

sea-going engineers less effective, they are reluctantly compelled to protest, and must respectfully urge on the Board of Trade the great necessity of rescinding the clause in question.

I am, &c.,  
(Signed) W. R. HAWKINS,  
Secretary.

To the Assistant Secretary,  
Marine Department,  
Board of Trade, London.

(8.)

**HULL INCORPORATED CHAMBER OF COMMERCE AND SHIPPING TO THE  
BOARD OF TRADE.**

Hull Incorporated Chamber of Commerce and Shipping,  
Exchange Buildings, Hull, 5 May 1899.

DEAR SIR,

UNDERSTANDING that the Board of Trade have it in contemplation to promulgate fresh regulations relating to the examination of engineers in the Mercantile Marine, the subject has been very carefully discussed at a meeting of the Shipping Committee of this Chamber, held here to-day; and it was unanimously resolved that representations be made to the Marine Department of the Board of Trade that such proposed amended regulations are totally unnecessary, and would act prejudicially to the interests of the Mercantile Marine of this country.

The Committee are strongly of opinion that the effect of such proposed alterations would seriously affect the supply of apprentice engineers, and this will happen at a period when, by the continual increase in steam tonnage, a larger number of men will be imperatively needed.

The Committee are decidedly of opinion that no alteration whatever is required in the existing regulations, and the members of the Committee, I may say, include all the practical and largest steam shipowners in the port.

Trusting to hear that the above-named proposals are withdrawn,

I am, &c.,  
(Signed) JOS. GREGSON,  
Secretary.

The Assistant Secretary,  
Marine Department,  
Board of Trade, London, S.W.

(9.)

**INSTITUTION OF NAVAL ARCHITECTS TO THE BOARD OF TRADE.**

Institution of Naval Architects,  
5, Adelphi Terrace, London, W.C.,  
11 May 1899.

SIR,

IN reference to your letter (M. 1278) inviting this Institution to make any observations which may occur to them with regard to the revised regulations which have been prepared for the examinations of engineers in the Mercantile Marine, I am directed to inform you that the Council of the Institution have carefully considered the said revised regulations, and have unanimously agreed to certain suggestions which are embodied in the enclosed statement, dated May 9th, 1899, which I have the honour to forward to you.

I also beg to enclose a printed copy of the regulations (marked office copy, Institution of Naval Architects), with suggested alterations and omissions marked in red ink.

I am, &c.,  
(Signed) GEORGE HOLMES,  
Secretary.

The Assistant Secretary,  
Marine Department, Board of Trade,  
7, Whitehall Gardens, London, S.W.

## Enclosure in No. 9.

Institution of Naval Architects,  
5, Adelphi Terrace, London, W.C.,  
9 May 1899.

THE Council of the Institution are of opinion that it would be desirable to modify the proposed rules of the Board of Trade for the examination of engineers of the Mercantile Marine, as follows:—

First, as to workshop experience, the Council believe that the substitution of five years for the three years at present required will be desirable, but they think that no period of the five years should be served under the age of 15. They think, however, that so long as three years are spent in the workshop, half of this time being actually at fitting or erecting, then as much as two years might with advantage be served in the drawing office, or two years might be served in the engine room at sea. To meet these views the wording of the paragraph on page 11 has been modified.

In the past it has been possible for men who have not served any workshop apprenticeship, but who have been long engaged in the engine room at sea, to qualify for certificates of competency, and the Council think that such men should not be entirely prevented from progressing if they are worthy of advancement. To meet their cases a requirement similar to paragraph *b*, page 10, of the 1895 regulations should be an alternative, but instead of four years the time might reasonably be made six years. For such men, the question as to their ability as artisans is provided for by the second paragraph in page 11 of the 1898 regulations.

With regard to the educational and practical requirements for candidates for second-class certificates, the Council are of opinion that paragraphs *h*, *i*, and *l* should be amended as shown on the attached copy.

With regard to the qualification for first-class certificates, the Council are of opinion that a knowledge of refrigerating machinery, electric light engines and dynamos, electric motors, and of hydraulic machinery, should not be included in the subjects for the examination, seeing that such machinery is fitted only in comparatively few vessels, and that in no case is it essential to the safety of the vessel. Such subjects, however, might with advantage be included in the subjects for examination for the *extra* certificates.

In view of this it is submitted that paragraph *i*, page 14, should be omitted altogether. It may be remarked that the requirement in this paragraph referring to steering engines, being contained in the requirements for second-class certificates, is covered by the first paragraph of section 23.

It is submitted that paragraph 41, page 19, be amended, to make it certain that candidates therein referred to will be allowed to be examined; also that, in case of failure at the examination, they should be treated as regards re-examination in the same way as other failing candidates.

Paragraph 42 requires amendment to provide for the new rating of artificer engineers of the Royal Navy (who are promoted to that rank after very considerable sea service), and also to provide that assistant engineers, who have not had 12 months' service *at sea*, should not be eligible for certificates of service.

With regard to the new elementary questions, the Council are of opinion that each question should be complete in itself, and that, accordingly, questions 265, 270, and 271 should be combined to form one question, as also should 272, 273, and 274, also 275, 276, 277, and 278, and 298, 299, 300, and 301.

The Council also are of opinion that questions 190, 222 to 264, 279 to 297, referring, to types of machinery, &c. not in general use, or to auxiliary machinery not necessary to the safety of vessels, should be omitted altogether from the examinations for second and first-class certificates, although they might with advantage be retained for the examination for extra certificates. They also are of opinion that the latter part of question 192 should be omitted, and that the wording of 267 and 269 should be as amended.

((Signed) GEORGE HOLMES,  
Secretary.

(10.)

LIVERPOOL STEAMSHIP OWNERS' ASSOCIATION TO THE BOARD OF TRADE.

Liverpool Steam Ship Owners' Association,  
10, Water Street, Liverpool,

SIR,

16 May 1899.

THIS Association have had under careful consideration the revised regulations with regard to the examination of engineers in the Mercantile Marine, enclosed in your letter of the 11th March, and I am instructed to

inform you that in the opinion of this Association the additions and alterations are a distinct improvement on the present regulations.

I am further instructed to thank your Board for affording this Association an opportunity of considering the draft of the regulations.

I am, &c.,  
(Signed) NORMAN HILL,  
Secretary.

Walter J. Howell, Esq.

(11.)

INSTITUTE OF MARINE ENGINEERS TO THE BOARD OF TRADE.

58, Romford Road, Stratford,  
London, E., 16 May 1899.

DEAR SIR,

IN forwarding the result of the various conferences and discussions which have been held by the Council, the members in open meetings, and a Committee of the Council of the Institute of Marine Engineers, on the subject of the proposed regulations for engineers' certificates of competency, to take the place of the former regulations, I have great pleasure in desiring you to convey to the Board of Trade, and especially to the Marine Department, the warmest thanks of the office-bearers and Council of this Institute for the great and unvarying courtesy accorded to all, in connection with the correspondence and labour involved in bringing the altered regulations to their present form; not only are thanks due to the Board of Trade from this Institute, but from the whole country, for the whole community is interested in the improvements suggested or implied, and I have the honour to express this in the name of the Institute for conveyance to the Board.

With this preface, I beg to say that the proposed new regulations have been very carefully considered and compared with the old, many evenings having been devoted to the subject, both in open discussions and in committee and council meetings, due weight being given to every expression of opinion, especially where any difficulty or hardship might be found to exist in young apprentices obtaining the necessary qualifications, as what is wanted is, *not to restrict the number* of qualifying engineers, but *to improve the quality* of such as seek to qualify, so far as may be, *by regulation*.

I place this on record, specially, so that we may not be misunderstood in connection with this subject, as we have no sympathy with placing arbitrary and artificial restrictions on a natural trade output, for the purpose of temporary gain to a small section of the community.

The observations and recommendations we have to offer to the Board for consideration are embodied in the form of a report made by a Committee of the Council, as representing the views of the Institute on the subject.

Article No. 8 is the first rule which embodies any alteration of note. The alteration is a decided improvement, and the whole tendency of the new regulations will be to ensure a better-trained class of men entering for the second-class certificate, inasmuch as it defines the requirements in respect to the workshop service, and also ensures attention to the special department of experience calculated to make the most efficient men.

Article No. 9 is also an improvement on the old rule, by empowering the examiner to require a definite statement of experience to be submitted, signed, and endorsed in respect to the sea service of candidates.

Article No. 22 is the most important of the new regulations, and contains several points which are specially worthy of comment; these may be summarised as follows:—

- (a) The five years' workshop service cannot be advocated too strongly, and it is a matter of congratulation that the Board of Trade has seen it to be imperative to insist upon this time as a minimum before a candidate presents himself for a second-class certificate.
- (b) The definite time that a candidate must serve in special departments of the works in order to qualify him is specified distinctly, and this is considered also a step in the right direction.

- (c) The time allowance for candidates attending a technical school is considered to be *too much* relatively to workshop service. It is desired to point out that the usual conditions of attendance at technical schools are such that three years' technical school training should only count as one year's workshop service, and no more than one year's service based on this equivalent should count for technical school training *under any condition*; that is to say, the whole service cannot be spent in a technical school.

We apprehend that the service of three years stipulated in the erecting or fitting shop may be completed after the "technical apprenticeship" expires; that is to say (for instance), in the event of an apprentice having served the *major part* in *other* departments of the works. Here it is to be remarked that the qualifying word "*minor*" is hardly necessary in line 8 of page 11; especially as the pattern-making, surface-tabling, and drawing office, at least, are not looked upon as "*minor*" departments.

It should be made clear that the three years' erecting-shop service is not, as an absolute necessity, to be passed within the apprenticeship limit, whether it be five or seven years, according to the rule in the particular workshop; the latter, *i.e.* seven years' apprenticeship, being not unknown.

The expression "N.H.P." is considered to be too vague, and if used to designate a standard, it ought to be defined so as to express, at least approximately, a certain ratio to the actual power; meantime the expression has no definite limit, and has become a byword signifying that which is undefined.

As such would be of great service for owners of small launches and boats desiring engineers, it is regretted that no provision is made by which a third-grade certificate might be established, not necessarily a compulsory one, but as an encouragement to junior engineers as a stepping-stone to the second, so that the process of education may be gradual and free from cram.

It is noted with satisfaction that the attention of candidates is directed to the study of auxiliary machinery, and that questions on such are included in the papers set down for the examinations of candidates; the questions themselves are exceedingly good and well adapted for the purpose intended.

It is considered that the new regulations should come into force sooner than 1904, for many obvious reasons, and as a good deal of publicity has already been given to the subject-matter of the proposed alterations, *definitely* during the past eight or nine months, and *indefinitely* during the past eight or nine years.

It is not considered desirable to make the qualifications to pass *any easier* for a foreigner who cannot express himself clearly in the language of the engine room. The recent judicial comments in connection with the deck department give point to this.

It is noted with satisfaction that the facilities for obtaining certificates, given in the old regulations, without proper qualifications obtained in the workshop are withdrawn, as having served their purpose and become obsolete.

Thanking you for your kind courtesy in the matter, on behalf of the Council,

I am, &c.,  
(Signed) JAS. ADAMSON,

Hon. Secretary,

Institute Marine Engineers.

The Assistant Secretary,  
Board of Trade, Marine Department.

INSTITUTION OF MECHANICAL ENGINEERS TO THE BOARD OF TRADE.

Institution of Mechanical Engineers,  
Storey's Gate, St. James's Park, Westminster, S.W.,  
17 May 1899.

DEAR SIR,

IN further reference to your letter of 11th March last, I am directed by the Council of this Institution to thank you for the opportunity afforded

them of making suggestions on the revised regulations which the Board of Trade have prepared with regard to the examinations of engineers in the Mercantile Marine; and to say that, a representative committee appointed by the Council of the Institution having carefully inquired into the matter, the Council heartily approve the new regulations.

I am, &c ,

(Signed) EDGAR WORTHINGTON, Secretary.

The Assistant Secretary,  
Marine Department, Board of Trade,  
7, Whitehall Gardens, S.W.

(13.)

CHAMBER OF SHIPPING TO THE BOARD OF TRADE.

Chamber of Shipping of the United Kingdom,  
5, Whittington Avenue, Leadenhall Street, E.C.,  
25 May 1899.

SIR,

255 +

MARINE ENGINEERS.

*Mem.—*

It is requested that the accompanying Pages may be substituted for those issued on the 25th July 1900.

August 1900.

effect—whether it be deliberately intended or not—of the proposed serious extension of the time of apprenticeship, and also of the proposed increased stringency of the examinations, will be to gradually and artificially restrict the number of certificated engineers available for service in the British Mercantile Marine. Practically speaking, none but steam vessels are now being built in this country, and, consequently, at no distant date the entire Mercantile Marine of Great Britain will consist exclusively of steam vessels. In view of this prospect, any restriction—whether artificially devised or not—of certificated engineers is, therefore, a matter which ought to be very seriously considered before it receives the sanction of the Board of Trade.

My Council also desire me to emphatically state that they strongly disapprove of the proposal in the regulations that “sea service alone will no longer qualify candidates for examination.” In their opinion practical service at sea is the most valuable qualification which a candidate for an engineer’s certificate in a sea-going vessel can have, and they are clearly of opinion that the necessary experience and knowledge to be gained before a second-class engineer’s certificate is granted can be obtained in actual service at sea in the engine room quite as well, or even better than, in the engine shops on shore.

In conclusion, my Council feel strongly that important changes such as those proposed in the new regulations should not be made by the Board of Trade unless the necessity for them has first been proved. So far, however, as my Council are aware, no such necessity has been shown to exist, and they earnestly trust that, before the new regulations are formally promulgated, the important questions referred to in this letter will be carefully reconsidered by the Board of Trade.

I am, &c.,

(Signed) W. H. COOKE, Secretary.

The Assistant Secretary,  
Marine Department,  
Board of Trade, S.W.

(14.)

HULL AND DISTRICT INSTITUTE OF ENGINEERS AND NAVAL ARCHITECTS  
TO THE BOARD OF TRADE.

Hull and District Institute of Engineers and Naval Architects,  
118, Londesborough Street, Hull,

DEAR SIR,

6 June 1899.

REFERRING to your favour of the 11th of March, I regret that we have been unable to discuss the matter therein mentioned until just recently, but I am now instructed to advise you that at a general meeting of the members, held last evening, the revised regulations were discussed, and the following recommendations made thereon:—

*Paragraph 9.*—That the words “or managing owner” should be added after the words “superintendent engineer,” on line 7. This addition is suggested, as there are cases where a permanent superintendent engineer is not employed.

*Addition to paragraph 22.*—Section (a). That should the apprenticeship have been limited to a period of four years, an additional year shall be served either in the shop or at sea. The apprenticeship to be proved either by indenture or certificates of service from his employer or employers.

*Paragraph 38.*—That this should be limited in its application to trawlers and pilot vessels *under* 66 N.H.P., but in vessels having machinery above that power the time should count the same as in home trading vessels. This is suggested because trawlers are now being built for this port and elsewhere of large size, fitted with engines over 66 N.H.P.

Yours, &c.,

(Signed) GEORGE H. STRONG,

Hon. Secretary.

The Assistant Secretary,  
Marine Department, Board of Trade,  
7, Whitehall Gardens, London, S.W.

CLYDE STEAMSHIP OWNERS' ASSOCIATION TO THE BOARD OF TRADE.

Clyde Steam Ship Owners' Association,  
53, Bothwell Street, Glasgow,  
8 June 1899.

SIR,

Examination of Engineers.

I AM instructed to send you copy of a letter addressed by this Association to the Secretary of the Chamber of Shipping. I have to explain that it was hoped that this letter would have reached the Chamber of Shipping before they communicated the views of the Chamber to you, but I am informed by the secretary that they had already addressed you on the subject, and therefore I have been obliged to communicate the views of my directors direct.

I am, &c.,

(Signed) NEILSON BIRD,

Secretary.

The Assistant Secretary,  
Marine Department,  
Board of Trade, London.

Enclosure in No. 15.

CLYDE STEAMSHIP OWNERS' ASSOCIATION TO THE CHAMBER OF SHIPPING.

Clyde Steam Ship Owners' Association,  
53, Bothwell Street, Glasgow,  
2 June 1899.

DEAR SIR,

AFTER careful consideration my directors have come to the conclusion that beyond the abolition of the sea service only qualification and one or two points of detail, principally connected with the extended scope of the examinations, there is little in the new regulations to which exception should be taken by this Association; that, in fact, the effect of the proposed amendments, apart from the exceptions referred to, is simply to bring the Board of Trade regulations up to date, and more in accordance with the present practice than the existing rules. In consequence, however, of a letter dated 28th April 1899, which the London Shipowners' Society addressed to the Assistant

Secretary of the Board of Trade on the subject, and with which my directors do not altogether agree, it has become necessary to go into the matter with more detail.

The principal points in which the proposed regulations differ from the present are:—

1. Extension of necessary period of apprenticeship from three to five years.
2. Abolition of sea service only qualification.
3. Increased scope of examination so as to include knowledge of refrigerating and electrical plant.

Taking these points in order, the London Shipowners' Association seem to fear that the extending of the necessary period of apprenticeship from three to five years may limit the supply of certificated men. The general practice, however, with engineers already is to serve an apprenticeship of five years or even longer, so that the effect of this alteration would simply bring the rules in accordance with custom.

Regarding the second point, my directors agree with the views of the London Shipowners' Society.

On the third point, which to my directors seems very serious, the London Shipowners' Society is silent. At present the portion of the examination known as elementary questions consists of 188 questions. These have been increased to 302, or about 60 per cent. Many of those additional questions deal with the subjects of refrigerating and electrical plant, and it appears to my directors as if reasonable objection might be taken to those on the ground that they are unnecessary to the great majority of engineers, and might curtail the number of men who were able to successfully pass the examination. It seems unfair to ask men to pass an examination in subjects of no practical use to them in their business. They can only be treated in the examination in the most elementary manner, and it is very doubtful whether the little knowledge on the subjects crammed up for the occasion would amount to more than what might be called "dangerous."

There is already a higher certificate known as the extra first class, to which those subjects might well be restricted, and only such engineers as have the higher qualifications be required to pass in those subjects, or a special certificate might be given for knowledge in refrigerating and electrical plant.

The London Shipowners' Society do not refer in their letter to the features which seem to be an improvement of the present system, viz., those which will enable engineers to obtain their certificates more rapidly than at present.

Under the old rules no sea service below fourth engineer counted as qualifying for examination as second engineer. Under the proposed amendments service at sea for one year on regular watch on the main engines and boilers of a foreign-going steamer qualify. No reference is made to the grade of the engineer on the watch. Again, under the old rules sea service qualifying for a first certificate could not be counted below the grade of third engineer in a four-handed job, or second engineer in a three-handed job. In the new regulations all the time counts if the engineer holds a second certificate and is senior engineer in charge of the watch, without reference to the grade in which he works. This will make it easier for a larger number of men to obtain the qualification for passing the examinations, and should therefore increase the number of certificated men, and, further, do away with the difficulty that is sometimes met with in getting men to accept junior positions where the time at present does not count as qualifying for examination.

There is another point to which my directors would like to draw attention, although it may not come within the scope of the regulations, viz., the desirability of simplifying the machinery whereby the certificate of an engineer who has been guilty of drunkenness while on duty could be summarily dealt with.

Yours, &c.,  
(Signed) NEILSON BIRD,  
Secretary,

W. H. Cooke, Esq.,  
Chamber of Shipping,

#### *Re Proposed Regulations for Engineers' Certificates.*

SIR,

THE above subject has been well considered and discussed by all our branches, and they have expressed their unanimous approval of the alterations.

As practical men we consider five years' apprenticeship is absolutely necessary for a young man to obtain sufficient practical knowledge to supervise the

machinery on board the modern steamship; and, further, we do not consider this knowledge can be obtained by sea service without workshop training.

Hoping the Board will be able to give effect to their recommendations at an early date,

Walter J. Howell, Esq.,  
Assistant Secretary,  
Board of Trade, Whitehall.

I am, &c.  
(Signed) W. L. MARSHALL.

(17.)

LIVERPOOL ENGINEERING SOCIETY TO THE BOARD OF TRADE.

Liverpool Engineering Society,  
Royal Institution, Liverpool,  
12 August 1899.

SIR,

IN further reply to yours of the 14th ult. with reference to the proposed amendments in the examination for engineers in the Mercantile Marine, we cannot say that there is anything to which specific objection can be taken; indeed, the character and tone of the examinations must have the effect in a few years of improving the scientific attainments of the men in this service.

It does seem, however, that if all candidates must be prepared to pass any examination which could be based on these regulations, there would be a risk of excluding many really competent men. We think it would be evident to anyone carefully perusing the regulations that a man who could satisfactorily pass a rigid examination in all that is laid out in the rules and regulations without the aid of books of reference, if his knowledge was accompanied by practical and technical skill, would be worth more than an ordinary sea-going engineer's wages.

I am, &c.,

INSTITUTION OF ENGINEERS AND SHIPBUILDERS IN SCOTLAND TO THE  
BOARD OF TRADE.

Institution of Engineers and Shipbuilders  
in Scotland (Incorporated),  
207, Bath Street, Glasgow,  
29 November 1899.

DEAR SIR,

AT a meeting of Council of this Institution, held on the 16th November 1899, your letters of 11th March last, 8th July last,\* and 14th ultimo,\* together with the Board of Trade draft revised regulations relating to the examination of engineers in the Mercantile Marine, were submitted for consideration.

The Council is of opinion that, as you have, no doubt, already communicated with the Board of Trade Consultative Committee on this question, and as the Council is adequately represented on that Committee, no good object can be served by the Council offering an opinion on its own account. By so doing the Council might be considered in a measure as ignoring its own representatives on the said Committee. The Council further desires to point out that it was to meet cases such as the one above, where the Board of Trade might wish to have the benefit of the opinion of "the trade" generally on any question affecting it, that this Committee was constituted.

Yours, &c.,  
(Signed) R. CAIRD, President.  
EDWARD H. PARKER, Secretary.

T. H. W. Pelham, Esq.,  
" Board of Trade, Marine Department,

UNITED KINGDOM MUTUAL STEAMSHIP ASSURANCE ASSOCIATION TO  
THE BOARD OF TRADE.

United Kingdom Mutual Steam Ship  
Assurance Association, Limited,

9, Great St. Helens, London, E.C.,

4 May 1900.

SIR,

WE understand you are about to issue some new "Regulations for Examination of Engineers in the Mercantile Marine," the effect of which is to raise the term from three to five years for service in the shops.

We desire to prominently bring to your notice the opinion of the Committee of this Association, which represents over 1,000,000 tons of steamship property, and principally of the class to be prejudicially affected by the new regulations.

The Committee consider that such a step is absolutely detrimental to the best interests of the shipping community of this country, and also to the men themselves. What the ordinary cargo boat requires is an engineer who has sea experience, and the longer he has had such experience, the greater value he is to his owner. Moreover, it is obvious that on board ship engineers gain more practical experience in the work that they are required to perform, and of the tools they are required to use, and of the nature of the repairs which from time to time are necessary to be effected, than it is possible to gain in a five years' apprenticeship in the shops.

The Committee of this Association think that any alterations in the existing regulations are entirely uncalled for, and, until cause be shown why they should be altered, they consider any action in the matter quite opposed to public necessity.

So far as we are aware, there is no record in existence of any lives having been lost at sea through the want of mechanical knowledge on the part of the engineers.

Moreover, it is probable the result of such regulations will be to introduce more foreign element into British steamers. This, we venture to think, is a subject which should be vigorously combated by the Board of Trade. The foreign element which so largely pertains amongst sailors will, undoubtedly, spread to the engine-room hands if these new regulations are enforced, and we strongly urge that the Government seriously consider this phase of the case before sanctioning the regulations under consideration.

We have, &c.,

(Signed) THOS. R. MILLER & SON,

Managers.

The Assistant Secretary,

Board of Trade, Whitehall, S.W.

(20.)

NORTH OF ENGLAND STEAMSHIP OWNERS' ASSOCIATION TO THE  
BOARD OF TRADE.

North of England Steamship Owners' Association,  
G, King Street, Quayside, Newcastle-on-Tyne,

17 May 1900.

SIR,

WITH respect to the proposed change in the regulations in regard to the granting of certificates of competency to marine engineers, I am directed by the Committee of Management of this Association to respectfully protest against the suggested alterations.

With regard to the proposal that the period of service in the workshops should be raised from three to five years, I have to point out that my Committee consider this quite unnecessary, and are of opinion that the period at present provided in the regulations is amply sufficient to qualify candidates for the possession of a second-class certificate.

I am further requested to strongly urge that the Board of Trade should not accept the suggestion to provide for a third-grade certificate for engineers, which could not have any beneficial result, but would tend to restrict the number of engineers available for employment in merchant vessels.

My Committee trust that you will give earnest consideration to their wishes in this matter.

I am, &c.,  
(Signed) WILLIAM R. LORD,  
Secretary.

The Assistant Secretary,  
Marine Department, Board of Trade,  
Whitehall Gardens, London, S.W.

## Report to the Permanent Secretary, Board of Trade.

---

SIR,

In continuation of the Report of March, 1899, printed as Parliamentary Paper, C. 9248, I submit particulars of the sight tests used in the Mercantile Marine for the year ended 31st December, 1899. Table I. contains details of each case of failure reported; Table II. shows the percentage of failures in form vision and in colour vision to the total numbers examined; and Table III. gives the nature of the defect in each case of reported colour blindness.

Of the 21 candidates who failed in form vision during 1899 none were re-examined; while of the 43 who failed in colour vision 13 were re-examined on appeal, and of these 4 passed and 9 were rejected.

Of the candidates who had failed during the previous year, 1898, one was re-examined in form vision, but again failed.

The number of officers already in possession of certificates who, on coming up for examination in the year 1899, failed to pass the sight tests, was three; one first mate, and two second mates failing in colour vision. Both the latter appealed; on re-examination, one passed, but the other failed.

No case of failure to pass the colour ignorance test has been reported.

I am,

Sir,

Your obedient servant,

WALTER J. HOWELL.

March, 1900.

TABLE I.—LIST of CANDIDATES for CERTIFICATES of COMPETENCY as OFFICERS in the MERCANTILE MARINE and others, who have been reported to the Board of Trade as having failed to pass the Form Vision, Colour Vision, or Colour Ignorance Tests between the 1st January and the 31st December, 1899.

TABLE II.—TABLE showing the NUMBER and PERCENTAGE of FAILURES to pass the SIGHT TESTS from 1877 to the end of 1899.

*Note.*—Up to 31st August, 1894, candidates were tested by means of coloured cards and glasses. Since that date Holmgren's wool test has been used, supplemented by a test for form vision, and a test for colour ignorance.

| Year.                           | Number of Examinations in Form Vision. | Number of Failures in Form Vision. | Percentage of Failures in Form Vision. | Number of Candidates examined in Colour Vision. | Number of Failures in Colour Vision. | Percentage of Failures in Colour Vision. |

Board of Trade, }  
30 November 1899. }

Cosmo Monkhouse,  
Assistant Secretary.

Exchequer and Audit Department,  
Somerset House, London, W.C.

I hereby certify that the Statement of the Account of Wages and Effects of Deceased Seamen, as rendered by Cosmo Monkhouse, Esq., Assistant Secretary to the Board of Trade, from 1st April 1898 to 31st March 1899, has been signed and passed by me under the 36th section of the Act 29 & 30 Vict. c. 39; and that the Charge and Discharge on the said Account are as follows:-

|                     |        |    |    |
|---------------------|--------|----|----|
| Charge - - - - -    | £.     | s. | d. |
| Discharge - - - - - | 19,419 | 9  | 8  |
|                     | 16,302 | 15 | 5  |

and that on the said Account the Accounting Officer is indebted in the sum of Three Thousand One Hundred and Sixteen pounds Fourteen shillings and Threepence.

Given under my hand this 27th day of December 1899.

Richard Mills,  
Comptroller and Auditor-General.

*The British Suez Canal Directors to the Marquess of Salisbury.—(Received May 1.)*

My Lord,

Paris, April 21, 1900.

WE have the honour to forward to your Lordship the Returns of the navigation through the Suez Canal for the year 1899, as compared with those of the two previous years 1897 and 1898.

The Returns are, as previously, comprised in nine Tables, and are in continuation of those inclosed in our despatch of the 27th April, 1899.

The following is a brief summary of their contents:—

Table No. 1.—*A Monthly Return of the Shipping, Tonnage, and Transit Receipts for the years 1897, 1898, and 1899.*

The net tonnage for the past year shows an increase of 657,027 tons as compared with that of 1898, and of 1,996,257 tons as compared with that of 1897.

The amount of dues has risen proportionately from 85,294,769 fr. in 1898 to 91,318,772 fr. in 1899, being an increase of 6,024,003 fr.

The receipts are higher than in any previous year since the opening of the Canal, and are 25,151,193 fr. more than they were ten years ago.

Table No. 2.—*A Return of the Shipping and Tonnage for the same period of three years arranged under their respective Flags.*

The number of vessels which passed through the Canal was 2,986 in 1897, 3,503 in 1898, and 3,607 in 1899, of which 1,905 in 1897, 2,295 in 1898, and 2,310 in 1899 carried the British flag.

The tonnage of British vessels has also increased, having risen from 5,319,136 in 1897 and 6,297,743 in 1898 to 6,586,310 tons in 1899. During the same period, the tonnage of German vessels has also increased from 858,685 tons in 1897 to 969,597 in 1898 and 1,070,767 tons in 1899.

Table No. 3.—*A Comparative Return of these three years, based on Table No. 2, and giving the Percentage of the Shipping and Tonnage of the Flags engaged.*

The percentage of British vessels and their tonnage in 1899 was 64 and 66·6 respectively, as against 65·5 and 68·2 in 1898. There has been a slight increase in the percentage of German, Dutch, Austrian, Norwegian, Danish, and Japanese vessels.

Table No. 4.—*A Return of the Shipping for the year 1899, arranged under its various Categories, Merchant-Vessels, Mail-Steamers, Ships of War, &c.*

In this Table the shipping is divided into the various classes of merchant-vessels, mail-steamers, war-ships and transports, Government chartered vessels, and vessels in ballast. Of 2,726 merchant-vessels and vessels in ballast, of a net tonnage of 7,360,299 tons, passing through the Canal, 2,044 ships, of a net tonnage of 5,684,896 tons, were British, being nearly 75 per cent. of the number and fully 77·2 per cent. of the tonnage; 265, or 9·7 per cent., were German vessels, whose tonnage was 9·3 per cent. of the whole; France, Holland, and Norway combined furnishing a total of 8·7 per cent. of the vessels and 6·9 per cent. of the tonnage of the carrying trade to the East through the Suez Canal.

---

Table No. 5.—*A General Yearly Return of Vessels from the opening of the Canal to the present Time, showing their Gross and Net Tonnage, the Transit Receipts, and the mean Net Tonnage per Vessel.*

In the ten years 1889–98, the annual net tonnage ranged from 6,783,187 tons to 9,238,603 tons, and the transit receipts from 66,167,579 fr. to 85,294,769 fr. The average of the net tonnage was 7,992,897 tons; and of the transit receipts 75,126,933 fr.; while in 1899 the net tonnage amounted to 9,895,630 tons, and the transit receipts to 91,318,772 fr. The mean net tonnage per vessel also rose from 1,951 tons in 1889 to 2,743 tons in 1899, being 98 tons per vessel in excess of 1897 and 106 tons more than in 1898.

---

Table No. 6.—*A Monthly Return, showing the average Time occupied by Vessels in 1899, distinguishing those which navigated both by Night and Day from such as navigated by Day alone.*

The mean duration of passage for all vessels navigating the Canal amounted to 18 hours 38 minutes in 1899 as compared with 18 hours 2 minutes in 1898. In 1899 the percentage of vessels navigating by night was 90·7 per cent., as against 94 per cent. in 1898.

---

Table No. 7.—*A Return showing the Draught of Water of Vessels navigating the Canal during the last Twelve years, with the Percentage of such Draught.*

The percentage of vessels drawing less than 23 feet has fallen from 61·4 in 1898 to 58·9 in 1899, while vessels drawing more than 23 feet increased from 38·6 in 1898 to 41·1 in 1899.

The maximum draught allowed for vessels passing through the Canal is 25 feet 7 inches, and 386 vessels, drawing more than 24 feet 7 inches, used the Canal, as compared with 374 in 1898, 391 in 1897, and 360 in 1896, representing a percentage of 10·6 in 1896, 13·0 in 1897, 10·7 in 1898, and 11·7 in 1899.

---

Table No. 8.—*A Return of the Number and Classification of Passengers who passed through the Canal in 1899.*

The number of troops carried through the Canal amounted to 108,552 as against 122,052 in 1898, being a decrease of 13,500. There was a decrease of 8,443 British, 6,254 Russian, 6,967 Turkish, 1,136 German, 3,148 Italians, and 1,407 Dutch, against an increase of 10,269 American and 2,418 Spanish troops as compared with 1898. There has also been an increase of 8,780 civilian passengers, and of 6,396 pilgrims, emigrants, and convicts.

---

Table No. 9.—*A Return showing the Number of Passengers carried through the Suez Canal from its opening in 1870 to the end of the year 1899.*

In the year 1870, 26,758 passengers were carried through the Canal; in 1880 the number rose to 98,900, in 1890 to 161,352, and in 1899 to 221,348, as against 219,729 in 1898.

We have, &c.  
 (Signed) J. STOKES.  
 H. AUSTIN LEE.  
 C. W. FREMANTLE.

REPORT OF THE HARWICH HARBOUR CONSERVANCY BOARD.

---

(F &amp; H. 7344.)

THE Harwich Harbour Conservancy Board have to report that the amount received from dues on shipping for the year ended 31st March last was 2,336*l.* 3*s.* 9*d.*, showing an increase on the receipts of the preceding year of nearly 100*l.*; that the sum received for ballast was 148*l.* 15*s.* 6*d.*, for interest and rent 48*l.* 1*s.*, which with incidentals amounting to 65*l.* brought up the total receipts to 2,598*l.* 0*s.* 3*d.*, being 246*l.* 3*s.* 7*d.* over the sum received for the year ending 31st March 1899.

But little expenditure has been necessary on the Board's works at Landguard during the year, as will be seen by the small amount shown under this head in the accompanying account, and full information will be found as to the state of these works, and their immediate surroundings, in the Engineer's Annual Report, a copy of which is annexed hereto.

The Great Eastern Railway Company by their line of fine steam vessels carries on an increasing trade with the Continent, and a Mail route has recently been established between London (via Parkeston Quay) and the Hook of Holland; an extensive and growing trade is carried on by Ipswich merchants bringing ships of heavy tonnage to the Harbour, and the Ipswich Dock Commissioners are expending heavily in deepening the River Orwell to meet the growing requirements of their port, and there is a growing traffic to Felixstowe Dock.

The Harbour is also increasing in importance as a Naval station, and since the date of last Report H.M. training ship "Ganges" has been stationed there.

All these facts show a steady development of trade with Harwich Harbour, and its increasing usefulness for naval purposes, making it the more regrettable that at present the Conservators, for want of funds, have not been able to commence the dredging operations referred to in the last two reports. This question, which is one of vital importance, is still engaging the attention of the Board with the hope that ere long some means may be found to enable the Conservators to carry out a much-needed improvement.

By order of the Board,

(signed) *Richd. S. Barnes,*

Harwich, 3 May 1900.

Clerk to the Board.

## ENGINEER'S REPORT.

To the Chairman and Members of the Harwich Harbour Conservancy Board.

Gentlemen,

Ipswich, 30 April 1900.

THE configuration of Landguard Point has undergone considerable change during the past year, owing to the beach, which had accumulated on the west side of the main jetty, over the stacked blocked apron, between piles 65 and 110, having travelled towards the point, to which attention was called in my report of 1898.

This action, due to southerly winds and to the ground swell during easterly gales, rushing along the west side of the main jetty, was very marked in January 1899, when the stacked blocking was denuded down to the bottom course, the high water line driven back to pile 68 and a prominent point thrown out opposite pile 35.

In the following months of April, June, October, December, 1899, February and March 1900, this action was repeated, so that the high water line has been driven back to pile 52, the blocking exposed nearly to its foundations and the point advanced during the year another 100 feet into the Harbour. During north-easterly winds at end of March 1900, some beach passed through the main jetty and forms a temporary protection covering up to about half-tide level.

Upon your inspection of the works in July 1899 the large growth of the Harbour point was so marked that the necessity for replacing some of the planked hearting to check the travel of beach through the jetty was pointed out and authorized, such hearting was thereupon raised about 1½ feet and is now buried level with the beach.

It was the object of the spur groyne, which I then recommended to be constructed at pile 75, and for which I submitted drawings and estimate in October last, to prevent the denudation of the west side of the jetty and to uphold such an accumulation of beach as would form a

“broad barrier of natural deposit between the sea and the Landguard works in the least expensive manner.”

Now that the high water beach line has been driven back about 200 feet, the erection of one new spur groyne will probably be insufficient to arrest the movement of beach and restore and maintain the necessary protective outline.

The travel of beach from the N.E. along the seashore, has been comparatively very small during the past year, and may be due to the large excavations made in the beach about three furlongs to the N. of the main jetty by the War Department, forming a catchpit for such material as would have travelled up to and through the main jetty.

With regard to the point forming in the harbour its outline has not been much affected by wind waves within tide range, while the projection of a horn has for some weeks sheltered the shore to the northward and checked the travel of beach up the harbour.

By the eroding action of the ebb-tide, a considerable quantity of material has been carried seaward from the point, resulting in the projection of the three fathoms line nearly 200 feet to the westward of its position in 1896. A comparison of the survey of 1896 and that of June 1899 by Captain Richards, R.N. of H.M.S. “Triton,” shows that the deep water between Landguard Point and the Bell Buoy has been in rapid progress of extension seaward by the continued scouring action of the ebb tide and promises, if the action be continued, to develop a channel of at least equal capacity to the westward main channel and to complete the isolation of the beach and shoal.

Attention has been called again during the year to the shingle ridges and patches on the “Glutton,” “Bone” and “Gristle” shoals and to the obstructions they offer to navigation in the fairway of the harbour. These spots have only 14 feet water over them at low water of ordinary spring tides, and some recent ebbs have gone 2 to 2½ feet lower.

With the increased draft of vessels now frequenting the ports of Harwich and Ipswich and under the conditions named, the removal of such shoal places has become more urgent and it is most desirable that the schemes of deepening by dredging which have been under consideration for some years should be realised at an early date.

No new work has been undertaken during the past year, the expenditure being principally for watching and maintenance.

The superstructure of the main jetty has remained substantial; some slight additions have been made to the leading light beacons and the works are generally in a satisfactory state.

I am, &c.  
(signed) *Thos. Miller,*  
Engineer to the Board.

\* Sir Geo. Nares' report of June 1890.

### PETERHEAD HARBOUR OF REFUGE.

Engineer's Report for the year ended 31st March 1899.

#### SOUTH BREAKWATER.

During the past year the Breakwater was extended  $112\frac{1}{2}$  lineal feet.

The following are the chief items of work executed in connection with the above extension :—

|   |   |   |                        |
|---|---|---|------------------------|
| Rubble deposited in foundation mound          | - | - | 13 639 tons            |
| Levelling surface of mound for foundations of |   |   |                        |
| superstructure                                | - | - | 765 superficial yards  |
| Concrete in mass                              | - | - | 234 cubic yards        |
| Do. in blockwork                              | - | - | 10,852 "               |
| Do. blockwork in apron                        | - | - | 599 "                  |
| Granite ashlar in facework                    | - | - | 21,323 cubic feet      |
| Do. other than in blocks                      | - | - | 420 "                  |
| Do. in copings                                | - | - | 413 "                  |
| Do. in pitching                               | - | - | 2,020 superficial feet |
| Granite bollard fixed                         | - | - | 1                      |
| Permanent way laid                            | - | - | 61 lineal yards        |
| Gas and water pipes laid                      | - | - | 75 "                   |

In consequence of the lowering of the level of the superstructure foundations by 13 feet, the removal of 1,071 tons of surplus rubble was rendered necessary. This work was performed by divers.

A new cement shed to contain about 1,000 tons was constructed and brought into use.

## PLANT.

The steam hopper barge "Thistle" was overhauled, altered, and repaired; and two 10-ton boats for depositing stone have been constructed.

The railway, workyard, plant and buildings have been properly maintained.

Serious delays were occasioned during the year owing to the impossibility of obtaining Portland cement in sufficient quantity, and on account of shortness of water.

The daily average number of men and horses employed upon the works during the past year was as follows:—

|                    |   |   |   |   |   |   |   |   |   |     |
|--------------------|---|---|---|---|---|---|---|---|---|-----|
| Free men           | - | - | - | - | - | - | - | - | - | 140 |
| Convicts           | - | - | - | - | - | - | - | - | - | 211 |
| Warders and Guards | - | - | - | - | - | - | - | - | - | 31  |
| Horse              | - | - | - | - | - | - | - | - | - | 1   |

## PROGRESS DRAWING.

The accompanying drawing shows, as far as practicable, the progress made with the works.

(signed) *Coode, Son and Matthews,*  
Engineers in Chief.

## PETERHEAD HARBOUR.

MEMORANDUM by the Director of Works of the Navy on Messrs. COODE, SON and MATTHEWS' Report for the financial year 1898-99.

1. In compliance with Treasury Letter of the 3rd April, 1888, I forward the Report of the Engineers in Chief on the Works executed during the financial year ended 31st March, 1899.

2. The Report shows that good progress was made with South Breakwater. The progress made during the last six years is as follows:—

|         |   |   |      |   |
|---------|---|---|------|---|
| 1893-94 | - | - | 105  | feet and 40 feet of foundation prepared in addition.  |
| 1894-95 | - | - | 90   | " " 66 " ditto ditto  |
| 1895-96 | - | - | 112½ | " " 60 " ditto ditto  |
| 1896-97 | - | - | 105  | " " 45 " to low water level.  |
| 1897-98 | - | - | 90   | " " 34 " to 10·7½ below low water.  |
| 1898-99 | - | - | 112½ | " " 1,071 tons of surplus rubble removed by divers in consequence of lowering level of super-structure 13 feet. |

The work has now got into deeper water and is all founded on a rubble mound.

3. The steam hopper barge "Thistle" has been overhauled, altered, and repaired, and two 10-ton boats for depositing stone built so that steady progress may be made with the rubble mound, which has to be allowed to settle before the blockwork superstructure is placed on it.

4. The railway, workyard, plant, and buildings have been properly maintained.

5. Considerable delays were occasioned during the year owing to the difficulty in obtaining Portland cement in sufficient quantity, and on account of shortness of water. Steps have been taken which will, I hope, prevent these troubles recurring.

6. The daily average of Convicts employed on the works continues to fall off; during the year it has been 211 as against 226 shown in the previous year's report. It was originally contemplated that 500 Convicts would be available daily. The average number during the last five years has been 229, the numbers being :—

|         |   |   |   |   |   |   |   |     |
|---------|---|---|---|---|---|---|---|-----|
| 1894-95 | - | - | - | - | - | - | - | 229 |
| 1895-96 | - | - | - | - | - | - | - | 241 |
| 1896-97 | - | - | - | - | - | - | - | 237 |
| 1897-98 | - | - | - | - | - | - | - | 226 |
| 1898-99 | - | - | - | - | - | - | - | 211 |

7. The annual report of the Surveyors has been received, with measurements and valuation of the work done on the basis of Sir John Coode's original estimate (in accordance with Treasury Letter of the 8th June, 1889), *plus* a percentage as mentioned in my last year's memorandum to cover the estimated increase of cost of 160,000*l.* (approved by Treasury, 31st December, 1896), in consequence of the dearth of Convicts.

The following extracts are made from the Surveyors' Report :—

“ Permanent work has been done to the Breakwater, and material prepared during the year, which we value at 22,049*l.* 14*s.*

“ The cost as per Engineers' returns is 25,856*l.* 7*s.* 6*d.*

“ Our valuation of the permanent work at the Breakwater is more by 6,193*l.* 6*s.* 6*d.* than the cost as set forth by the Engineers.

“ The value of the material on the ground at the 31st March, 1898 was 16,670*l.* 12*s.* 7*d.*

“ The value of the material on the ground at the 31st March, 1899 was 15,502*l.* 16*s.* 5*d.*

“ The decision to lower two courses of the ' Breakwater beyond the Rock,' approved by Treasury, 10th August, 1897, “ necessitated the removal of a portion of the rubble mound already tipped. This removal had to be done by divers. Our valuation of this work is 803*l.* 5*s.*

“ Some of the concrete blocks were washed away during the storms of last winter ; we value the reinstatement of these at 1,861*l.*”

The Surveyors do not anticipate any excess on the revised total estimate.

Although the Surveyors' Report shows that the permanent work during the year was carried out considerably under the revised estimate, it must be borne in mind, as pointed out in my last year's memorandum, that the difficulties and risks will increase as the work proceeds into deeper water, and the uncompleted end is more exposed.

PETERHEAD HARBOUR OF REFUGE.

Sir,

WE have the honour to send herewith our Report accompanied by an explanatory drawing showing the progress made with the above Works during the year ended 31st ultimo.

We have the honour to be,

Sir,

The Director of Works of the Navy,  
21, Northumberland Avenue, W.C.

Your obedient Servants,  
*Coode, Son and Matthews.*

Engineers' Report for the year ended 31st March 1900.

### SOUTH BREAKWATER.

During the past year the Breakwater was extended 128 lineal feet.

The following are the chief items of work executed in connection with the above extension :—

|   |                       |
|---|-----------------------|
| Rubble deposited in foundation mound - -                            | 19,849 tons           |
| Levelling surface of mound for founding<br>superstructure - - - - - | 835 superficial yards |
| Levelling surface of berm to receive blockwork<br>apron - - - - -   | 367 "                 |
| Concrete in mass - - - - -  | 302 cubic yards       |
| Do. in blockwork - - - - -  | 13,537 "              |
| Do. blockwork in apron - - - - -                                    | 606 "                 |
| Granite ashlar in facework - - - - -                                | 26,468 cubic feet     |
| Do. other than in blocks - - - - -                                  | 537 "                 |
| Permanent way laid - - - - -  | 105 lineal yards      |

To permit the lowering of the foundations, 609 tons of surplus rubble were removed by divers.

### BARGE HARBOUR.

A retaining wall, 250 feet in length, to prevent the washing down of the rubble slope by waves coming over the Breakwater, was constructed. The principal items of work executed were as follows :—

|                         |   |   |   |   |   |   |   |                  |
|-------------------------|---|---|---|---|---|---|---|------------------|
| Concrete                | - | - | - | - | - | - | - | 145 cubic yards  |
| Granite ashlar facework | - | - | - | - | - | - | - | 3,889 cubic feet |
| Do. in coping           | - | - | - | - | - | - | - | 507 "            |
| Do. in steps            | - | - | - | - | - | - | - | 77 "             |

### NEW RESERVOIR AT STERLING HILL.

Owing to the withdrawal of prison guards for service in South Africa, and also to the small number of convicts available, this work has been greatly delayed.

7,883 cubic yards of earth were excavated, and 155 lineal yards of stoneware pipes were laid.

The railway, workyard, plant, and buildings were properly maintained.

The daily average number of men and horses employed on the works during the past year was as follows :—

|                    |   |   |   |   |   |   |   |   |     |
|--------------------|---|---|---|---|---|---|---|---|-----|
| Free men           | - | - | - | - | - | - | - | - | 144 |
| Convicts           | - | - | - | - | - | - | - | - | 175 |
| Warders and Guards | - | - | - | - | - | - | - | - | 31  |
| Horse              | - | - | - | - | - | - | - | - | 1   |

### PROGRESS DRAWING.

The accompanying drawing shows, as far as practicable, the progress made with the Breakwater during the year.

(signed) *Coode, Son and Matthews,*  
Engineers in Chief.

### PETERHEAD HARBOUR.

MEMORANDUM by the Director of Works of the Navy on Messrs. COODE, SON and MATTHEWS' Report for the financial year 1899-1900.

1. In compliance with Treasury Letter of the 3rd April, 1888, I forward the Report of the Engineers in Chief on the Works executed during the financial year ended 31st March, 1900.

2. The Report shows that good progress was made with South Breakwater. The progress made during the last seven years is as follows :—

|           |   |   |  |
|-----------|---|---|--|
| 1893-94   | - | - | 105 feet and 40 feet of foundations prepared in addition.  |
| 1894-95   | - | - | 90 " " 66 " ditto ditto  |
| 1895-96   | - | - | 112½ " " 60 " ditto ditto  |
| 1896-97   | - | - | 105 " " 45 " to low water level.   |
| 1897-98   | - | - | 90 " " 34 " to 10·7½ feet below low water.   |
| 1898-99   | - | - | 112½ " " 1,071 tons of surplus rubble removed by divers in consequence of lowering level of superstructure 13 feet |
| 1899-1900 | - | - | 128 " " 609 tons ditto ditto   |

3. Steady progress is being made with the rubble mound which must be allowed to settle before the blockwork superstructure is placed on it.

4. The railway, workyard, plant, and buildings have been properly maintained.

5. At the Barge Harbour a retaining wall was constructed 250 feet in length to prevent the washing down of the rubble slope by waves coming over the Breakwater.

6. Owing to withdrawal of prison guards for service in South Africa, and also to the small number of convicts available, a new storage reservoir which is being constructed at Stirling Hill in connection with the works has been greatly delayed.

7. The average number of convicts employed during the year has been 175 as against 211 shown in previous year's report. It was originally contemplated that 500 convicts would be available daily. The average number during the last six years has been 220, the numbers being :—

|           |   |   |   |   |   |   |     |
|-----------|---|---|---|---|---|---|-----|
| 1894-95   | - | - | - | - | - | - | 229 |
| 1895-96   | - | - | - | - | - | - | 241 |
| 1896-97   | - | - | - | - | - | - | 237 |
| 1897-98   | - | - | - | - | - | - | 226 |
| 1898-99   | - | - | - | - | - | - | 211 |
| 1899-1900 | - | - | - | - | - | - | 175 |

8. The annual report of the Surveyors has been received, with measurements and valuation of the work done on the basis of Sir John Coode's original estimate *plus* a percentage, as mentioned in my memorandum on the report of Messrs. Coode, Son and Matthews, 1897-98, to cover the estimated increased cost of 160,000*l.* due to the dearth of convicts and consequent greater cost of labour.

The following extracts are made from the Surveyors' Report :—

“ Permanent work has been done to the Breakwater and Barge Harbour, and material prepared during the year, which we value at 25,302*l.* 18*s.* 11*d.*

“ The cost as per Engineers' returns is 18,013*l.* 12*s.*

“ Our valuation of the permanent work at the Breakwater is more by 7,289*l.* 6*s.* 11*d.* than the cost as set forth by the Engineers.

“ The value of the material on the ground at the 31st March, 1899, was 15,502*l.* 16*s.* 5*d.*

“ The value of the material on the ground at the 31st March, 1900, was 13,789*l.* 10*s.* 11*d.*

“ The decision to lower two courses the foundation of the ‘ Breakwater ‘ beyond the Rock,’ approved by Treasury, 10th August, 1897, necessitated the removal of a portion of the rubble mound already tipped. This removal had to be done by divers. Our valuation of this work is 456*l.* 15*s.*

“ Some of the concrete blocks were washed away during the storms of last winter ; we value the reinstatement of these at 1,398*l.* 16*s.*”

The Surveyors do not anticipate any excess on the revised total estimate.

Although the Surveyors' Report shows that permanent work during the year was carried out considerably under the revised estimate, leaving a substantial reserve for unforeseen contingencies, it must be borne in mind, as pointed out in my memoranda for the two past years, that the difficulties and risks become greater as the work proceeds into deeper water ; it seems probable that damage by storms will also increase as the structure advances farther across the bay.

(signed) *E. Ruban,*

Director of Works.

## REPORT OF THE BOARD OF TRADE.

---

### MARGATE CORPORATION BILL. [H.L.]

---

By Clause 53 of this Bill it is proposed that the limits of the pier and harbour jurisdiction of the Corporation, and the power to levy rates, shall comprise the pier and harbour and the area below high water mark lying within two hundred yards from any part of those works, or from any part of the borough of Margate.

Although the Margate Pier and Harbour Company—whose undertaking is proposed to be taken over by the Corporation—possess similar powers under an Act of 1812, it would appear to be inconsistent with the spirit of modern legislation to allow Harbour jurisdiction, including the power to levy rates, to extend along the whole sea frontage of the borough, over 3 miles in length.

By Clause 124 it is proposed to authorise the application of the pier and harbour revenue in payment, *inter alia*, of loans for promenades and sea defence works, and the transfer of the surplus revenue to the district fund. This proposal also appears to be at variance with the general spirit of modern legislation, which is that dues levied upon ships and goods carried in ships should be applied to shipping purposes and to no other purposes.

To these points the Board of Trade desire to draw the attention of Parliament.

---

REPORT OF THE BOARD OF TRADE.

---

NORTH BRITISH RAILWAY BILL. [H.L.]

By this Bill it is proposed to transfer to the North British Railway Company the Harbour of Borrowstounness.

The Harbour of Borrowstounness is at present managed by a body of Commissioners, half of whom are nominated by the Borrowstounness Burgh Commissioners, and the remaining half by the North British Railway Company.

The general subject of the acquisition of docks and harbours by Railway Companies is discussed in the Report of the Joint Select Committee of the House of Lords and the House of Commons on Railway Companies' Amalgamation, 1872.

At page 19 of the Report, under the head "Competition by Sea," reference is made to the effects that might arise to the public from docks becoming the properties of Railway Companies, and thereby obtaining both a port and the railways leading to it, as well as the whole of a certain description of traffic by sea as well as by land.

The remedial measures proposed by the Joint Select Committee will be found at page 50 of their Report, amongst which are the following :—

"Effectual competition by sea exists, and ought to be guarded by preventing Railway Companies from obtaining control over public harbours."

To this Report the Board of Trade desire to draw the attention of Parliament.

### REPORT OF THE BOARD OF TRADE.

---

#### NORTH EASTERN RAILWAY BILL. [H.L.]

---

By this Bill it is proposed, *inter alia*, to empower the North Eastern Railway Company to acquire certain lands on the south side of the Hull and Selby Railway, between the Hessle Gas Works and the Hessle West Junction Signal Box on the said Railway.

These lands include a tract of foreshore of the River Humber below high-water mark, extending out to the Humber Conservancy line ; but the Bill does not disclose the exact object for which this River frontage is required.

This area is at present frequented by the public for purposes of recreation, being one of the few places in the immediate vicinity of Hull where the public can get to the river side, and the Board submit for the consideration of Parliament that the provision enabling the Railway Company to acquire this land should be considered with regard to the above-mentioned facts and to the question whether it can be shown that the land is required for the construction of some work for which a site cannot be obtained conveniently elsewhere and for which river access is necessary.

RETURN to an Order of the Honourable The House of Commons,  
dated 20 March 1900 ;—*for*,

COPY of the "REPORT of the Board of Trade on the SOUTHPORT AND  
LYTHAM TRAMROAD BILL."

1900.

REPORT OF THE BOARD OF TRADE.

SOUTHPORT AND LYTHAM TRAMROAD BILL.

By this Bill it is proposed to empower the Southport and District Tramroad Company to construct tramroads across the Estuary of the River Ribble between Dib Road, Hesketh, and a point near Guides Lane, Warton, together with a conveyor bridge across the navigable channel of the River Ribble, opposite Warton.

The Board of Trade have received from the Corporation of Preston, who are the Conservators of the River Ribble, a communication urging objections to the proposed scheme. This document is printed as an Appendix hereto, and the Board submit that it deserves the serious consideration of Parliament.

The Board desire to draw the attention of Parliament to the following extract from the final Report of the Ribble Navigation Commission appointed in pursuance of the Preston Corporation (Ribble Navigation) Act, 1889, to inquire, *inter alia*, into the practicability of providing a navigable waterway between Preston and the sea :—

Final Report (page 16).

"Accretion—Before leaving, however, this part of our Report we must emphasize our view, that the formation and maintenance of a navigable channel to the sea, and no less the preservation of the subsidiary water-ways to Southport and St. Anne's, depends on the tidal capacity of the estuary being left as far as possible unimpaired. Artificial accretion is still being carried on. If there is any authority in existence which has power to stop such accreting, that authority should at once be put in motion; if there is no such authority, the necessary powers for that purpose should, if possible, be obtained. We regard the conservation of the estuary as a vital point; and artificial accretion, if allowed to continue, will seriously affect our conclusions by altering the premises on which they are based."

Since the issue of that Report in 1891 the Board have always declined to give their consent to any works or operations which they considered might lead to accretion and thus diminish the tidal capacity of the estuary, and they view with apprehension the result which might follow the construction of the proposed Tramroad No. 3 across the sands on the southern side of the estuary.

The proposed conveyor bridge across the navigable channel of the Ribble leading to Preston will, according to the deposited plans, have a headway under the overhead fixed girder of 130 feet above high water, and the Board are advised that the insufficient height of this girder, and the method of working the bridge by a suspended conveyor car will be detrimental to navigation to and from the docks at Preston.

Further, the risk of works in the estuary being commenced and not completed, or owing to want of funds, or other causes, being abandoned or suffered to become derelict, should, in the opinion of the Board of Trade, be guarded against.

Board of Trade, }  
20 March 1900. }

## APPENDIX.

### RIBBLE NAVIGATION.

#### SOUTHPORT AND LYTHAM TRAMROAD BILL.

---

SIR,

Town Hall, Preston,  
29th January 1900.

IN reply to your letter of the 1st instant I beg to submit the following observations of this Corporation with regard to the above Bill:—

Last session a like Bill was promoted for an Act to authorise the construction of tramroads, tramways, and a bridge between Southport and Lytham, which it will be remembered the Corporation strenuously opposed as regarded so much thereof as comprised the crossing of the estuary of the River Ribble, that is, where it left the enclosed lands by Crossens Pool of the Hesketh and Scarisbrick estates respectively, and proceeded across the foreshore to the southern training wall of the river, and then by means of a girder bridge, having a suspended conveyor car, crossed the channel of the river near Lytham Dock. The result of the Corporation's opposition, supported by an adverse report from your Board, was, that this portion of the Bill was thrown out in the First House, the House of Lords, but the portion of the Bill relating to a tramway along the Hesketh Estate Embankment, terminating by the Crossens sewage outfall, was passed.

The present Bill is a continuation of this last-mentioned tramway with a view of repeating the attempt to cross the Ribble with the same class of bridge, and to accomplish this in such a way as to minimise the Corporation's opposition, which was in the last session in its salient feature of a twofold character, viz.:—the reduction of tidal area by accretion from the works crossing the foreshore, and the injury to the port by the crossing of the channel,—the promoters extend the authorised tramway from Crossens outfall along the inside foot of the Scarisbrick embankment, over the Hundred End Gutter and on to the embankment of Sir Geo. Fermor Hesketh, from the seaward end of which they carry their line on open ironwork supports like a pier, and thence across the river by the girder bridge and suspended conveyor car as in the previous Bill proposed, which bridge terminates on the sands north of the northern side of the channel in Warton, and the tramroad is continued over the sands to the land there on similar open ironwork supports, and thence the tramway extends into Lytham in the ordinary mode.

The crossing of the river so much further up than the point selected in last session's Bill undoubtedly materially attains its object, viz.:—of minimising the strong case as to the accretion and reduction of tidal area the Corporation were able to present last session, and the mode of construction by open ironwork supports is with the same object. How your Board on the question of reduction of tidal area may view the proposition remains to be seen in view of their objection some few years ago to anything artificial tending to enclosing the Longton Marsh, which is on the same side of the river, but still further up.

Now as to the proposed height of the girder over the channel the plans of the last session showed 103 feet above ordinary springs, the plans of the present session give 130 feet, thereabouts. The Corporation, by their evidence of Mr. Fowler (the resident engineer of the Ribble), when asked in cross-examination, named 200 feet as a necessity, and this is the height that is needed, calculated from the height of the equinoctial springs to the underside of the girder, such height being needed to ensure free passage to the port.

But then there is substantially discounting this height the suspended car. This in itself is a serious detriment to the interests of the navigation, and to minimise this, were the construction sanctioned, the user of it must be prohibited during tide time as the navigation is necessarily tidal.

Assuming, however, this prohibition, accidents with the best mechanical arrangements and utmost care happen, and were a stoppage to occur or breakdown during the passage across of this car, the port would be closed, and the trade more or less permanently injured, and there would be a great probability of the Corporation being subjected to actions, and may be, cast in damages, on the ground of inviting to user of the port by reason of the notices and information of the port published in like manner that other port authorities do and of course issue, and the taking of tolls.

In view of this risk to the Corporation and to their port, crossing over the river should be restricted to the ordinary railway bridge at a height of some 200 feet above equinoctial springs unless the promoters could very clearly demonstrate the impossibility on financial grounds.

Apart from this aspect of it too, the promoters should be compelled to demonstrate the financial success of the scheme, as otherwise the navigation may very injuriously be affected by having an obstruction permanently left in its area.

The proposed tramway is not for commercial purposes, strictly speaking, it is merely promoted for excursion traffic and pleasure seekers.

It is inevitable that this bridge will be deemed an impediment if not a danger to the navigation by traders and captains, who will readily divert their trade again to either Fleetwood on the north or Liverpool on the south, and the useful and increasing competition of the port of Preston with these and other ports will be greatly handicapped, and there will be a resulting increase of freightage to the injury of the trade of the port.

Many of the ships which frequent the port are sailing ships with masts much higher than the permanent girder of the proposed bridge, and such ships could only enter the channel by striking their topgallant masts and yards, an operation which in the circumstances would be most difficult and risky, and be a further cause of injury to the trade of the port, and such an operation would also create a further delay for such purpose, and would often be the cause of vessels losing their tide, and as the ocean-going trade to Preston can only be carried on about five days every fortnight, the loss of a tide would be a serious matter.

The operation of the lowering of masts and yards cannot in this case be viewed from an ordinary aspect, but it is governed by the geographical position of the port with sandbanks stretching miles to leeward with westerly winds prevailing and a tidal navigation.

The proposed works are exposed to heavy seas and gales of wind; the services of trams will therefore be variable, and during heavy weather must be discontinued; the bridge and cradle, from their weight and exposure, will be liable to get out of working order, and will be dangerous to passengers as well as to the traffic of the port.

As the evidence last session discloses the promoters named in that Bill were not finding the necessary capital, and the fact is, that this Company is merely a speculative Company founded to hawk the Bill when it becomes an Act about the market for its powers and benefits, and an important navigation with an established and increasing trade to obtain which upwards of a million and a half have been expended is to be jeopardised for the sake of company promoters.

As to the lighting under CLAUSES 8 and 9, the Corporation should have control or be consulted.

CLAUSE 36 (pier limits) and CLAUSE 37 (as to the mooring of vessels) are most objectionable.

CLAUSE 38 is ambiguous and possibly objectionable.

CLAUSE 39 of course cannot for a moment be accepted, nor CLAUSE 40.

These Clauses are encroaching upon the jurisdiction of the Corporation, and transferring of authority over any part of the navigable channel and foreshore from the Corporation, whose duty it is to preserve the same, to the promoters who have no interests in the navigation, or to your Board, is most dangerous and vexatious and would be a constant source of trouble.

I am, Sir,

Your obedient Servant,

(Signed) H. HAMER,  
Town Clerk.

The Assistant Secretary,  
(Fisheries and Harbour Department) Board of Trade,  
7, Whitehall Gardens, London, S.W.

(PROVISIONAL ORDERS.)

---

SESSION 1900.

---

REPORT by the BOARD OF TRADE of their PROCEEDINGS under THE GENERAL PIER AND HARBOUR ACT, 1861 (24 & 25 Vict. c. 45), and THE GENERAL PIER AND HARBOUR ACT, 1861, AMENDMENT ACT (25 & 26 Vict. c. 19).

---

IN pursuance of the 19th Section of The General Pier and Harbour Act, 1861, the Board of Trade make the following Report of their Proceedings with regard to applications for Provisional Orders under the above-named Acts.

---

The steps to be taken by Promoters for obtaining Provisional Orders are specified in the Acts themselves; but with regard to objectors the Board of Trade have made the following regulation, and in the case of all notices given of intention to apply for a Provisional Order under the above Acts the Promoters are required to publish a notice directing attention to the same:—

“ Any objections to the Provisional Order which it is intended to urge on the Board of Trade must be received by them on or before the 20th of January. A copy of such objections must also be sent at the same time to the Promoters; and in forwarding the objections to the Board of Trade the objectors, or their agents, should state that this has been done.”

The following is a statement of the applications now under the consideration of the Board of Trade, and of the steps which have been taken with respect to them:—

1. AYR.

The Promoters are the Ayr Promenade Pier and Pavilion Company, Limited, who apply for powers:—

1. To construct a pier (partly solid and partly open) at Ayr 250 yards in length, commencing 150 yards from the junction of Charlotte Street with the Promenade, and proceeding in a westerly direction.
2. To levy rates.
3. To borrow money not exceeding one-third of the paid-up capital.
4. To sell or lease the undertaking.

The estimated cost of the works is 32,500*l*.

Objections have been received from—

1. The Corporation of Ayr.
2. The Ayr Harbour Trustees.

The matter is under consideration.

2. BEXHILL

## 2. BEXHILL.

The Promoters are the Bexhill Urban District Council, who apply for powers :—

1. To construct a pier (open) at Bexhill, 1,380 feet in length, commencing at a point about 93 yards south-west of the coastguard station.
2. To levy rates.
3. To borrow 30,000*l*.
4. To sell or lease the undertaking.
5. To lease the rates.

The estimated cost of the works is 30,000*l*.

Objections have been received from Mr. T. W. Tarbet (on behalf of the Bexhill Promenade and Landing Pier Company, Limited, proposed to be incorporated).

For further remarks see No. 3.

## 3. BEXHILL.

The Promoter is Mr. T. W. Tarbet (on behalf of the Bexhill Promenade and Landing Pier Company, Limited, proposed to be incorporated), who applies for powers :—

1. To construct a pier (open) at Bexhill, 1,400 feet in length, commencing at a point adjoining the existing concrete sea wall and extending in a southerly direction.
2. To levy rates.
3. To sell or lease the undertaking.

The estimated cost of the works is 32,500*l*.

Objections have been received from the Bexhill Urban District Council.

The Board are given to understand that negotiations are in progress for the abandonment of one of the rival undertakings (2 and 3). The Board have therefore postponed the further consideration of these schemes.

## 4. BRIDLINGTON.

The Promoters are the Bridlington Pier and Pavilion Company, Limited, who apply for powers :—

1. To construct a pier (open) at Bridlington, 243 yards in length, extending seawards from a point on the esplanade opposite the Beaconsfield estate.
2. To levy rates.
3. To borrow money not exceeding one-third of the paid-up capital.
4. To sell or lease the undertaking.

The estimated cost of the works is 40,000*l*.

Objections

Objections have been received from

1. The Corporation of Bridlington.
2. The Bridlington Pier and Harbour Commission.

The matter is under consideration.

#### 5. DAWLISH.

The Promoters are the Dawlish Urban District Council, who apply for powers :—

1. To construct a pier (open) at Dawlish, 255 yards in length, extending in a south-easterly direction from the south-east side of the railway viaduct.
2. To levy rates.
3. To borrow such sums as, with the consent of the Local Government Board, may be deemed requisite.
4. To lease the rates.
5. To provide gas and electric lighting apparatus, &c.

The estimated cost of the works is 5,000*l*.

Objections have been received from certain ratepayers of Dawlish and the neighbouring district.

The Board are awaiting the observations of the Local Government Board upon the application, and in the meantime its consideration is suspended.

#### 6. EASTBOURNE.

The Promoters are the Eastbourne Pier Company, Limited, who apply for powers :—

1. To construct an extension and widening (open) of the existing pier at Eastbourne.
2. To levy rates authorised for the existing pier.
3. To sell or lease the undertaking.

The Order is to be read with the Eastbourne Pier Orders of 1864 and 1865.

The estimated cost of the works is 24,000*l*.

Objections have been received from :—

The Corporation of Eastbourne.

The matter is under consideration.

#### 7. FELIXSTOWE.

The Promoters are the Coast Development Company, Limited, who apply for powers :—

1. To construct a pier (open) at Felixstowe, 1,100 yards in length, extending seawards from a point near the old battery.
2. To levy rates.
3. To borrow one-third of the amount of capital expended for the purposes of the Order.
4. To lease the rates.
5. To generate electrical energy and use it for lighting purposes.

#### 4 REPORT BY THE BOARD OF TRADE OF PROCEEDINGS

The estimated cost of the works is 60,000/.

Objections have been received from :—

1. The Q. Tower Land, Limited.
2. Certain residents in Felixstowe.
3. Certain owners and occupiers in Felixstowe.
4. The Harwich Harbour Conservancy Board.
5. The Felixstowe and Walton Urban District Council.

The Board are in communication with the Promoters upon the subject of these objections, and the matter is under consideration.

#### 8. ILFRACOMBE.

The Promoter is Mr. Reginald Joseph Weld, who applies for powers :—

1. To construct a pier (solid or open) at Ilfracombe, 250 yards in length, commencing at the seaward termination of the existing solid portion of Crane Berth.

Also a lighthouse on or near Beacon Point.

2. To borrow such sums as, with outstanding amounts, shall not exceed 100,000/.
3. To sell or lease the undertaking.

The Order is to be read with the Ilfracombe Harbour Orders of 1870, 1873 1897.

No objections to the application have been received, and the matter is under consideration.

#### 9. KILRUSH.

The Promoter is Mr. Hector Stewart Vandeleur, who applies for powers :—

1. To construct a pier (solid) at Kilrush, 360 feet in length, extending in a south-westerly direction from the south-west end of Merchant's Quay.
2. To levy rates.
3. To lease the rates.
4. To borrow 3,000/.
5. To vest the existing pier and quay in the undertakers.

The estimated cost of the works is 1,800/.

Objections have been received from :—

1. The County Council of Clare.
2. The South Clare Railway Company.

An application has also been received from the Kilrush Urban District Council for a local inquiry to be held.

The Board are arranging for such an inquiry, and in the meantime the consideration of the application is suspended.

#### 10. LOWESTOFT.

10. LOWESTOFT.

The Promoters are the Coast Development Company, Limited, who apply for powers :—

1. To construct a pier (open) at Lowestoft, 250 yards in length, extending seawards from the junction of Claremont Road with the sea-front.
2. To levy rates.
3. To lease the rates.
4. To borrow one-third of the capital expended for the purposes of the Order.
5. To provide that the pier shall not be assessed for rates for five years, or until a dividend of 5 per cent. is paid.

The estimated cost of the works is 50,000/.

No objections to the application have been received, and the matter is under consideration.

11. PENRYN.

The Promoters are the Corporation of Penryn, who apply for powers :—

1. To construct a wharf wall and embankment (solid) at Penryn, 1,340 feet in length, commencing at a point about 250 feet from Messrs. Diplock's Wharf.
2. To levy rates in lieu of existing rates.
3. To borrow 10,000/.
4. To light the harbour by gas or electricity.

The estimated cost of the works is 10,000/.

No objections to the application have been received, but the Board are awaiting the observations of the Local Government Board, and in the meantime the consideration of the matter is suspended.

12. PORTESSIE.

The Promoters are Mr. Alexander Clark and fourteen others, who apply for powers :—

1. To provide for the incorporation of Harbour Commissioners not exceeding fifteen in number.

The first Harbour Commissioners are named in the Order, but their successors are to be elected annually in December by the ratepayers.

2. To empower the Commissioners to construct a pier (solid) 753 feet in length, and a breakwater (solid) 150 feet in length, at Portessie.
3. To empower the Commissioners to levy rates.
4. To empower the Commissioners to borrow 20,000/.

The estimated cost of the works is 13,400/.

No objections to the application have been received, and the matter is under consideration.

13. PWLLHELL.

13. PWLLHELII.

The Promoters are the Pwllheli Pier Company, Limited, who apply for powers :—

1. To construct a pier (open) at Pwllheli 200 yards in length, commencing at a point opposite Cardiff Road, and extending in a southerly direction.
2. To levy rates.
3. To borrow money not exceeding one-third of the capital expended for the purposes of the Order.
4. To lease the rates.

The estimated cost of the works is 31,788/.

No objections to the application have been received, and the Board propose to proceed with the Order.

## KILRUSH PIER (PROPOSED PROVISIONAL ORDER).

---

RETURN to an Order of the Honourable The House of Commons,  
dated 3 July 1900;—for,

COPY "of the REPORT made to the BOARD OF TRADE on the subject of an INQUIRY held by the BOARD OF TRADE at the COURT HOUSE, KILRUSH, on the 27th day of April, 1900, relative to a PROVISIONAL ORDER applied for by Mr. Vandeleur on the subject of KILRUSH PIER, which PROVISIONAL ORDER has been refused."

---

### INQUIRY INTO PROVISIONAL ORDER FOR KILRUSH PIER.

*Captain Hector B. Vandeleur*, Promoter.

SIR,

May 5, 1900.

I HAVE the honour to report that, in accordance with directions from Sir Courtenay Boyle (on H. 2053.00), I held an Inquiry at the Court House, Kilrush, at 10.30 a.m. on the 27th April last.

The date and place of Inquiry were duly advertised in the local papers and full notice given.

Captain Vandeleur was represented by Mr. Phelps, barrister of Limerick, the Kilrush Urban District Council by Mr. P. Lynch, and the South Clare Railway Company by Mr. Murphy. The Clare District Council acted with the Kilrush Council, and were not separately represented.

The application was for the extension of the existing Merchants Quay at Kilrush so as to form a continuous wharfage as far as what is known as the Customs Quay, and to vest the entire wharfage in Captain Vandeleur, and also to grant dues on the work as a whole.

The proposal was strongly opposed by the District Council and by the Railway Company.

The predecessors of Captain Vandeleur, about the time of the Irish Famine, 1846 to 1850, with the assistance of the Board of Works, expended some 800*l.* on the construction of the Merchants Quay, but it was not clearly proved if the Board gave a grant of 600*l.* towards this sum, or if it was only an advance on loan, but apparently it was the latter. The then owner, Colonel Vandeleur, charged dues on a schedule of his own; and dues were paid, apparently without dispute, for many years. The first vessel to use the works was the schooner "Confidence" on October 14th, 1848.

Dredging has been done from time to time to a small extent, and the total cost of the works is stated to have been 1,200*l.*

In 1891 the South Clare Railway was opened, and certain powers of acquisition and of way-rights were granted by Parliament. Acting under these powers, the Company placed rails on the Merchants Quay, a proceeding strongly resisted by Mr. Taylor, to whom Colonel Vandeleur had subleased the wharf and tolls, but force was used and the rails were laid. It was not contended that the Railway Company ever paid a compensation for way-rights, nor that they paid dues except for wharfage dues on landing cargo. The schedule of dues was from time to time revised and was last adjusted in 1896.

Messrs. Glyn, of Kilrush, large Flour Merchants, however, objected to certain increases in the dues, chiefly in regard to dues on steamers. They had

objected to quayage dues in 1894, and in 1898 the dispute resulted in legal proceedings, at the close of which Mr. Justice Andrews decided that Captain Vandeleur was entitled to quay dues (copy of judgment attached), and in consequence of this decision the South Clare Railway now pay quay dues, but not other dues.

The usual appliances for a trading wharf receiving dues are lacking. There are no harbour lights, no quay or road lights, no cranes, weighing machines, sheds, warehouses or storage of any sort, and the quay is thus without any of the usual facilities that compensate for the charging of dues on shipping.

Many vessels trading in the vicinity draw 12 feet of water, but at present there is only 11 feet water at spring tides here and only 5 feet at high water neap tides. It was however stated that vessels of 12 feet draught managed sometimes to get in on a high tide.

An unanimous opinion was expressed by all the witnesses that dredging was an absolute necessity for the port, and that without dredging any extension of the present wharf was comparatively useless.

The Customs Pier, to which it is proposed to extend and to join the Merchants Quay, is under a 999 years lease to Messrs. Russell, of Limerick, and has a clause stipulating that no extension of the Merchants Quay shall approach nearer than 50 yards of the Customs Quay. It was stated on behalf of Captain Vandeleur that this clause had been surrendered, but nothing was produced in the way of evidence to prove this statement.

The present average gross profit of the existing wharf appears to be about 100% per annum, the earnings being about 200%.

For the Opponents it was contended that no consent as required by sec. 25 of the Piers and Harbours Amendment Act (25 Vic. cap. 19), had been given either by the District Council in regard to right of way, or by the Railway Company in regard to their interests, and that the Order, if granted, would prejudice them adversely to sec. 14, Piers and Harbours Act (24 & 25 Vic. cap. 45).

They urge that the sum proposed to be spent will not provide reasonable access or proper facilities for shipping, while on the other hand dues will be established under Parliamentary authority, and will thus be legalised.

They also urge that the ratepayers, who are already heavily charged for the South Clare Railway, are very desirous of establishing a good port here, in which they will be assisted by the railway, and of providing such facilities by wharfage and dredging as will stimulate the trade, and thereby ease their rating burdens considerably.

They point out that the neighbouring pier at Cappa is already in the hands of the District Council, and that they would, if the Merchant Quay and new work was within their control, work them in conjunction and to the benefit of all ratepayers. Only one witness was called in favour of the Order, Mr. Mahoney, and even he strongly advocated extensive dredging.

A large number of witnesses were against the scheme, and among them Mr. O'Brien, Chairman of the Urban District Council, who stated the Council were anxious and ready to prepare a complete scheme, and to meet the large expenditure required for developing the harbour properly.

The question of title was opened, but this I declined to deal with. Captain Vandeleur, however, acknowledges that the site is Crown property (Woods and Forests), and is prepared to take a lease of it without dispute, although there are ancient charters and grants in his family which give grounds for dispute if the question of title has to be legally dealt with by the Courts.

The proposed extension would enclose a considerable area of tidal land, and this matter has not been considered fully in preparing the scheme. Either party would, however, be willing to take a Crown lease over it.

I submit the following objections to granting the Order, which require considerable re-drafting, especially in those items that confer a retrospective title on Captain Vandeleur :—

- 1st. The Order as at present drafted confirms a claim to an ownership which is doubtful and disputed, and which, by agreement, carries with it certain dues, now in abeyance and under dispute.
- 2nd. The proposed works are insufficient for their purpose, and do not afford navigational facilities of a nature to compensate shipping for paying dues.
- 3rd. No specific dredging operations are defined, nor are the lighting, crannage and warehousing appliances specified, and apparently none are intended.
- 4th. No consent of Messrs. Russell to breach of their lease was produced or proved.
- 5th. No provision has been made for dealing with the slob land that will be enclosed by the extension.
- 6th. The desire of the District Council and Railway Company to develop the port in an efficient manner for the general benefit of the locality and the ratepayers. Local opinion, as far as I could see at the Inquiry, was strongly in favour of the Council. Captain Vandeleur states he is perfectly willing to accept compensation for Merchants Quay and to relinquish the scheme to them if they desire it.
- 7th. The failure of the Promoter to comply with sections 24, 25 of the Piers and Harbours Act, 24 & 25 Vict. c. 45, and section 25 of the Amendment Act, 25 Vict. c. 19. These consents are absolutely refused, and if the rights are sustainable, as they appear to me to be, this defect would in itself stop the Order proceeding.

I therefore submit that, in these circumstances, the Board should decline to proceed with the Order applied for by Captain Vandeleur, and refuse his application.

I have the honour to be, Sir,

Your obedient Servant,

(Signed) FOLEY C. P. VEREKER,  
Captain R.N., A.I.C.E., and Professional  
Officer.

The Assistant Secretary,  
Fisheries and Harbour Department.

### EASTBOURNE.

The Order proposes to authorise the Eastbourne Pier Company (Limited) to widen and extend their existing pier and landing stage at Eastbourne, and to levy therefor the rates at present authorised for the pier.

### ILFRACOMBE.

The Order proposes to authorise the Undertakers of the Ilfracombe Harbour Order, 1897, to construct a pier or jetty at Ilfracombe, and a lighthouse on or near Beacon Point, to sell or lease the undertaking, and to borrow (including existing debts) 100,000/.

### LOWESTOFT.

The Order proposes to authorise the Coast Development Company (Limited) to construct a pier at Lowestoft, to levy rates of the usual description, to lease the rates, and to borrow one-third of the capital of the Company expended for the purposes of the Order.

### PORTESSIE.

The Order proposes to incorporate the Portessie Harbour Commissioners (fifteen in number), and to authorise them to construct a pier and breakwater at Portessie, to levy rates of the usual description, and to borrow 20,000/.

# PIER AND HARBOUR PROVISIONAL ORDERS (No. 2) BILL.

---

RETURN to an Order of the Honourable The House of Commons,  
dated 26 June 1900;—for,

COPY "of a SPECIAL REPORT by the BOARD OF TRADE on the PIER AND  
HARBOUR PROVISIONAL ORDERS CONFIRMATION (No. 2) BILL."

---

1900.

SPECIAL REPORT by the BOARD OF TRADE under Section 19 of the General  
Pier and Harbour Act, 1861.

THIS Bill has for its object the confirmation of certain Provisional Orders made under the General Pier and Harbour Act, 1861, by the Board of Trade; among them one authorising the construction of a promenade pier at Felixstowe.

The Board of Trade have received objections to the use of the pier on Sundays for the embarking or disembarking of passengers, or for any trading purposes, but the Board considered that it was not within their province to insert in the Order any provision preventing such use.

They desire, however, to bring the matter to the notice of Parliament, and append a copy of the objections referred to.

Board of Trade, }  
June 1900. }

COURTENAY BOYLE.

## APPENDICES.

---

(Copy) F. & H. 1478.

To the Secretary (Harbour Department), Board of Trade, Whitehall, London, S.W.  
St. John Baptist Vicarage, Felixstowe, Suffolk,  
19th January 1900.

### FELIXSTOWE PIER ORDER.

SIR,

I SEND, for the consideration of the Board of Trade, a copy of the resolution passed at a public meeting of residents here at Felixstowe last evening. The resolution was passed, only one person dissenting.

I have also sent a copy of the enclosed resolution to the promoters of the Order.

I remain, &c.

(Signed) J. G. MUNDAY,  
Vicar of St. John Baptist, Felixstowe,  
and Chairman of the Meeting.

(Copy) F. & H. 1478.

RESOLUTION passed at a Public Meeting held at the Victoria Hall, Felixstowe,  
on Thursday, 18th January 1900.

THAT this meeting of residents in Felixstowe, hearing that it is contemplated to construct a pier for steamboat and other traffic at Felixstowe, trust that in the Order of the Board of Trade authorising its construction a clause may be inserted providing against the use of the pier on Sundays for the embarking or disembarking of passengers on or from any steamer or other pleasure boat or vessel, or for any trading, so that the present quiet of the Sunday at Felixstowe may not be broken or interfered with.

That the chairman of this meeting be requested to transmit the resolution of this meeting to the Board of Trade, and that he be authorised to appear if necessary in support thereof before the Board of Trade, and either with or without professional assistance.

(Signed) J. G. MUNDAY,  
Chairman of the Meeting.

(Copy) F. & H. 1479.

Felixstowe, 19th January 1900.

The Secretary, Harbour Department, Board of Trade.

FELIXSTOWE PIER ORDER.

SIR,

On behalf of the signatories thereto, I herewith submit a memorial from owners and occupiers of premises to the Board of Trade in opposition to the Order asked for by the Coast Development Company.

I have sent a copy of the memorial to the solicitors to the Order.

I am, &c.  
(Signed) F. B. JENNINGS.

(Copy) F. & H. 1479.

To the Board of Trade.

FELIXSTOWE PIER ORDER.

WE, the undersigned owners and occupiers of premises (principally private houses of considerable rateable value) immediately adjacent to and overlooking the site of the proposed Felixstowe pier, and buildings proposed to be erected adjacent thereto, do hereby respectfully submit that the use of the pier by the arrival and departure of steamboats, with the disembarking and embarking of passengers, and the attendant ringing of bells, blowing of steam whistles or syrens, and the centralising a large number of persons, will on Sundays be such a nuisance, and will so interfere with the present quiet enjoyed by us on that day, that we pray your honourable Board to insert in the Order asked for by the promoters (the Coast Development Company) a clause prohibiting, except in case of distress or great emergency, all such traffic to and from the pier on Sundays; or, in the alternative, that the Order be refused.

Felixstowe, 19th January 1900.

(Extract) F. & H. 1519.

EXTRACT from Objections by the Felixstowe and Walton Urban District Council.

3. A clause should be inserted in the proposed Order to the following effect :—" No trade, business, or manufacture shall be carried on, nor shall any concert or other entertainment of any description take place upon the pier, or in or upon any erection thereon, or in or upon any land or premises adjacent or near thereto under the ownership or control of the Company, except with the approval and previous consent in writing of the Felixstowe and Walton Urban District Council under the hand of the clerk to the Council, nor shall any Sunday trading in goods be permitted upon the pier, or in or upon any erection thereon, or in or upon any land or premises adjacent or near thereto under the control or ownership of the Company ; and the Company shall be liable to a penalty not exceeding 20*l.* for every breach of the provisions of this section, and to a penalty not exceeding 10*l.* for every day during which such breach continues after conviction therefor."

See clause 50 of the Lowestoft Promenade Pier Act, 1899.

## P I L O T A G E.

ABSTRACT "of RETURNS relating to PILOTS and PILOTAGE in the UNITED KINGDOM (in continuation of Parliamentary Paper, No. 242, of Session I. of 1899)"—[as furnished by the various Pilotage Authorities].

(Year ended 31st December 1899.)

— 1. —

Of all BYE-LAWS, REGULATIONS, ORDERS, or ORDINANCES relating to PILOTS or PILOTAGE for the Time being in force, issued by the respective Pilotage Authorities in the United Kingdom :

— 2. —

Of the NAMES and AGES of the PILOTS or APPRENTICES licensed or authorised to act by the respective Pilotage Authorities, and of all PILOTS or APPRENTICES acting either mediately or immediately under such Authorities, whether so licensed or authorised or not :

— 3. —

Of the Service for which each PILOT or APPRENTICE is licensed :

— 4. —

Of the RATES of PILOTAGE for the Time being in force at the Ports under the Jurisdiction of the respective Pilotage Authorities, including therein the Rates and Descriptions of all Charges upon Shipping made for or in respect of Pilots or Pilotage :

— 5. —

Of the TOTAL AMOUNT received for PILOTAGE at the respective Ports aforesaid ; distinguishing the several Amounts received from British Ships and from Foreign Ships respectively, and the several Amounts received in respect of different Classes of Ships paying different Rates of Pilotage, according to the Scale of such Rates for the Time being in force, and the several Amounts received for the several Classes of Service rendered by Pilots ; and also the Amount paid by such Ships (if any) as have, before reaching the Outer Limits of Pilotage Water if Outward bound, or their Port of Destination if Inward bound, to take or pay for Two or more Pilots, whether licensed by the same or by different Pilotage Authorities ; together with the Numbers of the Ships of each of the several Classes paying such several Amounts as aforesaid :

— 6. —

Of the RECEIPT and EXPENDITURE of all MONIES (if any) received by or on behalf of the respective Pilotage Authorities aforesaid, or by or on behalf of any Sub-Commissioners appointed by them, in respect of Pilots or Pilotage.

(PRESENTED PURSUANT TO SECTION 585 OF THE MERCHANT SHIPPING ACT, 1894.)

Richard Holmes, Clerk.

PORT OF BARRY.

Pilotage is Free. Limits of District.—See Bye-law 1.

BYE-LAWS and RATES of PILOTAGE.

At the Court at Windsor, the 28th day of November, 1899.

Present :—The Queen's most Excellent Majesty in Council.

WHEREAS by the 582nd and 583rd sections of the Merchant Shipping Act, 1894, it is enacted that a pilotage authority may, by bye-law made under Part X. of that Act, do all or any of the things specified in section 582; but that a bye-law so made shall not take effect until it is submitted to Her Majesty in Council and confirmed by Order in Council :

And whereas the Barry Pilotage Board, being a pilotage authority within the meaning of the said Act, have made and submitted for the confirmation of Her Majesty certain new bye-laws, as set forth in the schedule hereto annexed, in substitution for the bye-laws hitherto in force :

And whereas the provisions of section 1 of the Rules Publication Act, 1893, have been complied with :

And whereas it has been made to appear to Her Majesty that the proposed new bye-laws are proper and reasonable :

Now, therefore, Her Majesty, by virtue of the powers vested in Her by the Merchant Shipping Act, 1894, and by and with the advice of Her Privy Council, is pleased to approve of, and doth by this Order confirm, the said bye-laws, as set forth in the schedule hereto annexed, in place of the bye-laws hitherto in force.

A. W. Fitzroy.

SCHEDULE.

1.—The following shall be the rates to be paid by the shipowners to pilots holding licences from the Barry Board :—

(a.) Every licensed pilot employed in taking a ship or vessel between the Barry Docks and any point in Cardiff Roads or the pilotage port of Barry, or *vice versa*, shall be paid according to the registered tonnage of such vessel, as follows :—

FOR VESSELS LADEN AND UNLADEN.

| If under 60 tons. | If 60 tons and under 100 tons. | If 100 tons and under 150 tons. | If 150 tons and under 200 tons. | If 200 tons and under 250 tons. | If 250 tons and under 300 tons. | If 300 tons and under 400 tons. | If 400 tons and under 500 tons. | If 500 tons and under 600 tons. | If 600 tons and under 800 tons. | If 800 tons and under 1,000 tons. | If 1,000 tons and under 1,300 tons. | If 1,300 tons and under 1,500 tons. | If 1,500 tons and under 1,700 tons. | If 1,700 tons.* |
|-------------------|--------------------------------|---------------------------------|---------------------------------|---------------------------------|---------------------------------|---------------------------------|---------------------------------|---------------------------------|---------------------------------|-----------------------------------|-------------------------------------|-------------------------------------|-------------------------------------|-----------------|
| £ s. d.           | £ s. d.                        | £ s. d.                         | £ s. d.                         | £ s. d.                         | £ s. d.                         | £ s. d.                         | £ s. d.                         | £ s. d.                         | £ s. d.                         | £ s. d.                           | £ s. d.                             | £ s. d.                             | £ s. d.                             | £ s. d.         |
| - 3 4             | - 5 -                          | - 6 8                           | - 8 4                           | - 10 -                          | - 11 8                          | - 14 -                          | - 16 8                          | - 19 4                          | 1 - -                           | 1 3 4                             | 1 13 4                              | 2 - -                               | 2 6 8                               | 2 13 4          |

\* And 5s. for every additional 100 tons.

(b.) Any ship or vessel to or from the pilotage port of Barry, upon or in the waters of the Bristol Channel between Lundy Island and Kingroad, for which the services of a duly licensed pilot may be required and rendered, shall pay according to the registered tonnage of such vessel, as follows :—

FOR VESSELS LADEN AND UNLADEN.

|   | If under 160 tons. | If 160 tons and under 200. | If 200 tons and under 300. | If 300 tons and under 400. | If 400 tons and under 500. | If 500 tons and under 600. | If 600 tons and under 800. | If 800 tons and under 1,000. | If 1,000 tons and under 1,250. | If 1,250 tons and under 1,500. | If 1,500 tons and under 1,750. | If 1,750 tons and under 2,000. | If 2,000 tons and upwards. |

(c.) Should a vessel (in charge of a Barry licensed pilot) go to Cardiff Roads for orders, and then proceed to Barry Docks, the pilot shall, in addition to the rates in (a), be entitled to a tide's pay (as provided in bye-law 2) for services rendered to the eastward of Lavernock Point.

2. Any pilot who may be required to remain on board any ship or vessel for the convenience of the captain, master, owner, or agent, shall be paid 10s. per day or part of a day he may be retained on board while at anchor. And any pilot who may be required to move any ship or vessel from one dock or tidal harbour to another dock or tidal harbour, or employed to pilot any ship or vessel for adjusting compasses or other purposes, occupying one tide or part of a tide, shall be paid for every ship—

3. Each pilot shall provide himself with a good and efficient cutter or pilot boat, which shall be approved and registered by the Board, he paying 2s. 6d. for such register. And such cutter or boat shall be kept in good repair, and be subject to periodical examinations by the Board, and there shall, if required by the Board, be one indentured apprentice to each pilot, article to serve his apprenticeship as a Barry pilot. Two but not more than three pilots may, by the permission of the Board, sail in the same boat and act in conjunction.

4. A rota shall be prepared by the secretary to the Board of the pilots and their cutters on turn for duty, so that there shall at all times, both day and night, be at least two cutters and their pilots under weigh, and stationed within the port limits guarding the port. Any pilot who shall neglect to get and keep his cutter

PORT OF BARRY—*continued.*

under weigh, and on station duly guarding the port upon any day or night upon which it was his turn to keep guard, shall for the first offence pay a sum, according to the judgment of the Board, not exceeding 10*l.*, and for the second or subsequent offence pay the sum of 10*l.* or lose his licence, as the Board may determine. Provided always that any pilot may, with the consent of the secretary in writing, provide by arrangement some other duly licensed cutter and pilot as a substitute.

5. Pilots shall be divided into two divisions. The first division to comprise channel pilots, the second division port pilots. Channel pilots shall be entitled to conduct within the waters of the Bristol Channel, eastward of Lundy Island, vessels destined for or departing from the Barry Roads. Port pilots shall only be allowed to conduct vessels within the limits of the pilotage port of Barry, that is to say:—An imaginary line drawn from Breaksea Point to the Breaksea Lightship, thence in an easterly direction to the Flat Holm, and thence in a north-westerly direction to Lavernock Point. The division for which a pilot shall be licensed shall be determined upon the report of the examining officers. And, subject to the provision contained in the 26th section of the Bristol Channel Pilotage Act, 1861, no pilot shall be eligible for a licence in another division until after he shall have been in active service as a pilot within the district aforesaid for two years in his then present division, and shall have passed a satisfactory examination.

6. If by stress of weather, accident, or captain's desire, any ship or vessel be compelled to bear up and return from the westward, the pilot in charge shall be paid the rate of pilotage for the distance he may have proceeded, and one-third pilotage, in addition to the rates fixed for such a distance, on account of bringing such ship or vessel back again.

7. Each pilot's cutter or boat shall have her number painted on each bow, and the name of the pilot or pilots, as well as her own name and the name of the port, painted in legible characters upon her stern, and shall have the letters BY marked in black paint, of not less than three feet six inches in length, painted on her foresail; and shall by day carry at her masthead a flag of not less than six feet by four feet, in two colours, the upper horizontal half white, and the lower part red. And at night each pilot's cutter or boat shall carry a white light only at the masthead, and shall exhibit a flare-up light, or flare-up lights, at short intervals, which shall never exceed fifteen minutes. Every pilot shall, immediately on boarding any vessel and taking charge thereof, hoist a flag in some conspicuous place, and keep the same flying during the time he so remains in charge; the flag to be the regular pilot flag—red and white—with the colours horizontal. In case of default in any of the above requirements, the pilot to be liable to a penalty not exceeding 20*l.* for every breach thereof.

8. Each pilot shall, within twenty-four hours after his return from a cruise, report himself to the secretary, and make a full and proper return, giving the number of his boat, the day of his last sailing for sea, the distance he proceeded, the date of his return, the name, flag, and captain's name of the ship he may have taken in charge or brought to port, together with the port from which the ship may have come, if in ballast or with cargo, with the name of the consignee, the draught of water of the ship, and registered tonnage. Penalty not exceeding 5*l.* for the first offence, and the loss of his licence for any subsequent offence, or such other punishment as the Pilotage Board may think necessary.

9. Each pilot shall pay all money received by him for pilotage to the secretary on the day following that on which it is received, or in case of such money being received at sea, then the pilot shall deliver the same to the secretary as soon as he returns to port; and all claims for extra days shall be inserted in the certificate of pilotage, and signed for by the master of the vessel. Any pilot violating this rule shall be subject to a penalty not exceeding 10*l.* for the first offence, and for the second offence to the forfeiture of his licence, or such other punishment as the Pilotage Board may think necessary.

10. Any captain, master, or agent of any ship or vessel bound to sea who may make application at the office of the Board for a pilot, shall give the ship's draught of water and registered tonnage, with such other information as may be required, and upon payment of the pilotage fees shall have a pilot named and appointed to take charge of his ship or vessel, preference in all cases to be given to the pilot who piloted her inwards. Such application to be made during office hours, and at least twelve hours before the pilot shall be wanted. Any pilot attending after being definitely ordered, and the captain declining to go to sea, shall receive the sum of 10*s.* for each attendance.

11. Any pilot who shall refuse or neglect to proceed to either of the pilot stations in the channel fixed by the Board, when ordered to do so by the secretary, unless prevented by illness or the loss of his boat, or who shall be guilty of drunkenness or of insolent or abusive language, or unwarrantable conduct towards any member of the Pilotage Board, or the secretary, or other officer of such Board, or the captain, master, owner, or agent of any ship or vessel for which he may be engaged, shall be liable to a penalty not exceeding 10*l.* for the first offence, and for the second or any subsequent offence, to the like penalty or the loss of his licence.

12. Any pilot who may absent himself from duty or go overland to take charge of any ship or vessel, or seek employment otherwise than in his own boat, without the written consent of the secretary, shall be liable to a penalty not exceeding 10*l.*

13. Should any owner or captain apply for a pilot to be sent for the purpose of bringing a vessel to Barry Docks, such application must be made to the pilotage office, and a pilot will be sent according to the rotation of the printed pilotage list. Should the pilot first on turn be absent, then the pilot next on turn shall be sent. The absent pilot to lose his turn.

14. Any pilot taking charge of a vessel not bound to the port for which he is licensed shall be paid the rates and be governed by the laws established at the port to which such vessel is bound.

15. Each pilot shall strictly conform to the directions of the harbour or dock master touching the mooring or unmooring, placing or removing, any ship or vessel which such pilot may have under his charge, so long as such vessel shall be within the limits of the authority of any such harbour or dock master.

16. For every original licence which shall be granted there shall be paid to the Board the sum of 1*l.* 1*s.*, and for every renewal thereof the sum of 10*s.* 6*d.* The licences of the pilots shall be renewed annually, the first week in January or otherwise, at the discretion of the Board.

17. Any pilot having charge of a vessel inward bound shall not be released from his duties or responsibilities until such vessel is securely moored in the dock or basin, as directed by the dock master; but if in charge of a vessel bound to a port for which he is not licensed, he shall be released from his duties and responsibilities when such vessel is anchored in the nearest roadstead to the port to which he is bound, and if outward bound, to such a distance or stage for which he has been engaged. Any pilot violating this rule shall be subject to a penalty not exceeding 10*l.* or the loss of his licence, or such other punishment as the Barry Pilotage Board may think necessary.

18. If any vessel, whilst in charge of a pilot, does or receives damage, he shall immediately report such damage done or received, together with particulars of the circumstances thereof, to the secretary of the Board, as per form adopted by the Board, under a penalty not exceeding 10*l.*, and such report shall be read to the Board at their next meeting. The circumstances of the accident shall be investigated by the Board, if deemed necessary, and the Board may, if they see fit, require the licence of the pilot to be given up to the Board until the case has been disposed of.

19. Each pilot shall keep in his possession his licence, together with a printed copy of the rates, bye-laws, and regulations, and shall produce the same to the captain, commander, owner, or agent of any ship or vessel,

## PORT OF BARRY—continued.

when required so to do, under a penalty not exceeding 10*l*.

20. The following regulations shall apply to pilots licensed by the Board, and any pilot who shall neglect or fail to obey such regulations, or any of them, shall for the first offence pay a sum, according to the judgment of the Board, not exceeding 20*l*., and for the second or subsequent offence pay the sum of 20*l*. or be liable to the loss of his licence, at the discretion of the Board.

(a.) The first pilot who arrives off Blacknore Point in his cutter shall be deemed to be the first on turn, and shall be bound to take charge of any vessel bound from Kingroad to Barry which calls for the services of a Barry pilot, and, when engaged, his cutter must follow him to Barry.

(b.) When two pilots are working together, the cutter must remain to the eastward of Blacknore Point until the last of the said pilots shall have been engaged, after which the cutter must be brought to Barry, and neither of the said pilots shall be entitled to a second turn until this rule has been complied with.

(c.) The first pilot who shall arrive in his cutter inside Newport River Buoy shall be deemed to be first on turn, and shall be bound to take charge of any vessel bound from Newport to Barry which calls for the services of a Barry pilot. And in the case of Newport pilots holding Barry licences, they shall notify in writing to the secretary when they wish to avail themselves of this permission.

(d.) Should any vessel bound to Barry, and brought from the westward, or followed up by a Barry pilot, proceed to some other port and thence to Barry, the pilot who brought or followed her up shall be entitled to the right of piloting that vessel into Barry, provided he remains on shore for that purpose, and notifies the secretary his intention to do so.

(e.) The pilot who first speaks to any such vessel to the westward, whether within the limits of his licence or not, shall be entitled to pilot that vessel into port, provided he gives his number to the vessel and follows her up and arrives alongside the vessel before the docking signal is up. In the event of the vessel receiving orders to dock early on tide, the pilot must be alongside before the anchor is weighed.

(f.) Should he speak to the vessel so far away that it will be impossible for him to be up in his cutter in time to dock, he shall be at liberty to follow the vessel up in any manner he chooses. Should he fail to arrive in time to take the vessel into dock, he shall still be entitled to take the vessel out, provided that he gives due notice of his claim to do so to the secretary.

(g.) When a pilot is following a vessel in accordance with the preceding rule, he shall not board any other vessel for the purpose of piloting her, unless his services are demanded by signal within the limits of his licence, in which case he must give up the vessel of which he is in charge to the first pilot who may speak to him. The channel pilotage payable by such vessel to be proportionately divided between the two; the first pilot retaining his right to the vessel which he is following up.

21. Should any pilot be absent when a vessel for which he has been engaged is ready to come into dock, the pilot that docks her will be entitled to the inward pilotage, but he shall have no claim to the vessel outwards.

22. No pilot shall be entitled to more than one inward-bound vessel, from the time he leaves the Barry Pierhead, until his cutter returns to Barry. (This provision shall not prevent any pilot taking charge of a ship with signal flying for a pilot), except under the following conditions:—

Should a pilot, after boarding a vessel to the westward, desire to send his cutter into any harbour situate within the Bristol Channel, he shall not

leave that harbour to go seeking for another vessel until such time shall have elapsed after his departure from Barry as is hereinafter provided.

Any harbour situate within the limits to the westward of Cold Knap, and the eastward of an imaginary line drawn from the Nash Point to Minehead, twelve hours:

Any harbour situate within the limits of an imaginary line drawn from the Nash to Minehead, and to the eastward of an imaginary line drawn from Ilfracombe to the Mumbles, if as a passenger, twenty-four hours; if engaged previously piloting a vessel to the Nash, twelve hours:

Any harbour situate to the westward of Ilfracombe, and the eastward of an imaginary line drawn from Hartland to Lundy and thence to Cady, if as a passenger, thirty-six hours; if engaged piloting a vessel to Ilfracombe, twenty-four hours. The time of departure from Barry to be notified to the secretary, who shall keep a record of the time so notified.

No pilot shall join his cutter outside the limits of his licence for the purpose of seeking employment.

23. Should any pilot be absent, from any cause, when a vessel which he is entitled to claim for pilotage is ready to proceed to sea, then the first pilot who offers may take charge of the vessel, and such pilot shall be entitled to the outward pilotage. Preference shall in all cases be given to the pilot's recognised partner, or any other pilot who may be appointed by the inward pilot to look after the vessel, provided that such appointment be notified to the secretary, and that the partner or appointed pilot presents himself in time to take the ship out.

24. No pilot shall tow his cutter with a vessel further than the distance for which he shall have been engaged to pilot such vessel. Neither shall he join his cutter beyond the limits for which he is engaged, except under conditions laid down in rule 22. No pilot shall join his cutter in the open channel under any circumstances, unless on leaving a vessel of which he has been a *bonâ fide* pilot.

25. Any pilot missing his cutter when down channel may return to port by any means available, but he must not, while so returning, board any vessel for the purpose of piloting her, unless such vessel has the usual signal flying for a pilot within pilotage waters.

26. Should the master of a vessel land without having been spoken to by a pilot, the first pilot who speaks the ship may claim the vessel.

27. Should a pilot desire to work in any cutter other than his own, formal application to do so must be sent to the secretary, and the permission of the Board to do so obtained, but the Board shall have full power to grant or withhold such permission.

28. Any pilot who, in the opinion of the Board, has boarded a vessel in violation of any of the foregoing rules, shall forfeit his claim to any pilotage payable by such vessel, and such pilotage shall be awarded by the Barry Pilotage Board to such other pilot as shall in their judgment be entitled to it, or in case no other pilot has any claim to the pilotage, the Board may, if they think fit, direct that the whole or any part of the pilotage so earned shall be placed to the credit of the Barry pilotage fund.

## Additional Pilots.

29. No person shall be appointed to act as a pilot unless he shall have served a regular apprenticeship for five years to a channel pilot in the waters of the Barry pilotage district, and have afterwards served at sea twelve months in square-rigged sailing ships, and twelve months in steamers, and passed the Board of Trade examination for second mate. This bye-law shall not affect apprentices whose indentures are dated previous to January 1st, 1897.

In case the Pilotage Board shall at any time be of opinion that an increased number of pilots are required in the said district and there shall not be a sufficient number of duly qualified apprentices to supply the

## PORT OF BARRY—continued.

deficiency, the Board shall be at liberty to examine any fit and proper person (having previously served five years as master or mate of a vessel) to act as pilot without having served such term of apprenticeship. But this provision shall not in any way prevent or debar the Pilotage Board from licensing other persons to act as pilots, who, in the opinion of the Board, are qualified to act as pilots.

*Apprentices.*

30. Every candidate, before he can be considered eligible for an apprenticeship indenture, shall produce the following certificates:—Birth, health, colour-blindness, and character; he shall not be less than 16 nor more than 20 years of age; he shall be able to read and write correctly, and have a competent knowledge of arithmetic.

31. The indenture of apprenticeship shall be signed by the pilot and the apprentice, and shall be witnessed by the secretary or some other responsible person, and shall be approved by the Board and duly registered at the pilotage office.

32. The Board shall have full power to inquire into the conduct of pilots towards their apprentices, and *vice versa*, and to investigate all complaints made by pilots against their apprentices, and also by apprentices against pilots, whether they be masters to such apprentices or not, and into the general conduct of apprentices. And the Board

shall have full power to inflict fines in reference thereto, not exceeding 10*l.* each, and also to direct any apprenticeship indenture to be cancelled upon such terms and conditions as shall be determined by the Board.

33. The pilot to whom any apprentice is serving shall endorse at the back of every indenture a statement of time lost by the apprentice, and of pecuniary losses which have been incurred by the pilot by reason of the negligence or want of attention of the apprentice, and such statement shall be initialled by the pilot and apprentice on the respective dates when such losses shall be charged against the apprentice.

34. At the completion of the five years' apprenticeship the pilot shall appear before the Board with the apprentice and his indenture, and the Board shall thereupon decide as to the amount of time and money (if any) to be made good by the apprentice before this indenture shall be surrendered to him, and such decision shall be finally binding on all parties.

35. Whenever an apprentice shall for the first time appear before the examining committee for examination for a licence to act as pilot, this indenture of apprenticeship, and all necessary papers as per bye-laws, shall be submitted to the inspection of the committee.

36. In respect of all offences by pilots against these bye-laws punishable by loss of licence the Board may suspend such pilots for such period as they may determine.

Charles Lucas, Clerk.

## PORT OF BRISTOL.

*Pilotage is Free, except within the limits of the Port of Bristol.*

*Limits of District.*—See p. 7 of Parl. Paper, No. 154 of 1889; and section 3 of Bristol Pilotage Order 1891, as confirmed by Pilotage Order Confirmation (No. 1) Act, 1891.

## BYELAWS and RATES of PILOTAGE.

**BYE-LAWS** made by the MAYOR, ALDERMEN, and BURGESSES of the CITY OF BRISTOL, acting as the Pilotage Authority for the Port of Bristol, under and by virtue of the Bristol Wharfage Act, 1807, the Bristol Dock Act, 1848, and the Merchant Shipping Act, 1894, for the government of Pilots and others.

1. The following bye-laws shall commence and take effect on the 1st day of June 1899, on which day all bye-laws, rules, and orders now in force for the conduct, government, and management of pilots and masters and mates holding pilotage certificates for the port of Bristol, and for fixing the rates and remuneration of such pilots, and for regulating the amount to be paid by every such pilot and every such master and mate to the duly appointed officer of the Pilotage Authority towards the pilotage fund shall be repealed, but this repeal is not to interfere with the institution or prosecution of any proceeding in respect of any offence previously committed, or any penalty thereby incurred, nor to affect any annuity or other allowance previously granted or made out of the pilotage fund.

2. In these bye-laws, unless the context otherwise requires, the following expressions have the meanings hereby assigned to them, that is to say:—

“Pilotage Authority” means the mayor, aldermen, and burgesses of the city of Bristol.

“Pilotage committee” means and includes the committee appointed by the Pilotage Authority for regulating or managing their affairs as a Pilotage Authority, and the representatives of licensed pilots and shipowners elected to serve on such committee in pursuance of the Pilotage Order Confirmation (No. 2) Act, 1890.

“Pilotage district” means the district over which the Pilotage Authority has jurisdiction.

“Pilot” means a person licensed by the Pilotage Authority to act as pilot within the pilotage district.

“Certificated master or mate” means and includes a master or mate who holds a pilotage certificate granted in pursuance of the Merchant Shipping Act, 1894, and who is acting within the pilotage district as master or mate of any ship in respect of which such certificate was granted.

*Pilots.*

3. No person shall be qualified to become a candidate for the office of pilot unless he shall have served an apprenticeship to a pilot for five years or upwards, or shall have been employed in cruising to the westward for seven years or upwards in a pilot skiff, and in either case shall also have served for one year in a vessel trading between Bristol and some place outside the Bristol Channel, and shall be over 25 and under 45 years of age.

4. No person shall be eligible to be licensed to act either as pilot or as a certificated master or mate within the pilotage district unless he produce to the Pilotage authority satisfactory testimonials as to character; a certificate from a medical officer to be appointed by the pilotage committee that he is not suffering from any ailment which would prevent his performing his duties efficiently, and a recent Board of Trade certificate as to his effective vision and freedom from colour-blindness, and until he shall have satisfied the Pilotage Authority as to his knowledge in the following subjects, viz.:—

- (1) The rules of the road at sea and the rules and regulations to be observed for the preventing collisions at sea, as laid down from time to time by the Board of Trade.
- (2) The Bristol Channel and the river Avon, and the proper method of navigating the same respectively.
- (3) The management of vessels, both steam and sailing, how to bring them to anchor and to keep them clear of their anchors in a tide-way, and how to moor, unmoor, and get them under weigh.

5. Pilots shall be divided into two classes, viz., first-class and second-class pilots. First-class pilots may pilot vessels of any tonnage, and second-class pilots may pilot sailing vessels of not exceeding 1,200 tons register, and steam vessels of not exceeding 1,000 tons register.

6. After a second-class pilot shall have served in that capacity for not less than one year, without any serious mishap to a vessel while in his charge through his own default, he shall be qualified to be licensed as a first-class pilot.

7. Whenever a sailing vessel exceeding 1,200 tons register or a steam vessel exceeding 1,000 tons register shall from necessity take on board a second-class pilot, in addition to the usual flag, a blue and white flag shall be kept flying, showing that the pilot in charge is a second-class pilot, and such vessel shall at the first practicable moment exchange such pilot for a first-class pilot. In any such case, when a first-class pilot shall supersede a second-class pilot, the master shall pay to the second-class pilot a proportionate sum for his services, and deduct that sum from the charge of the first-class pilot, and, in case of dispute, the pilotage committee shall determine the proportionate sums to which each party is entitled. No second-class pilot shall continue in charge of a sailing vessel exceeding 1,200 tons register, or a steam vessel exceeding 1,000 tons register, after a first-class pilot has offered to take charge of her. Provided that in no case shall a change of pilots take place on board a vessel after such vessel shall have entered the river Avon.

8. Every pilot shall, upon first receiving a licence, pay the sum of 2*l.* 2*s.* to the Pilotage Authority, and shall also pay to them the sum of 1*l.* 1*s.* on receiving every subsequent licence. Every certificated master or mate upon receiving his certificate shall pay to the Pilotage Authority the sum of 2*l.* 2*s.*, and shall also pay to them the sum of 1*l.* 1*s.* on every renewal thereof.

9. No pilot shall absent himself from his duty without the written permission of the haven master.

10. No pilot when proceeding to the outer limits of the pilotage district to cruise, or when cruising therein in his pilot boat or in that of another pilot, shall be towed by a steam vessel so as to prejudice the opportunity of any other pilot to board an incoming vessel; nor shall he endeavour to obtain the pilotage of any vessel when another pilot is attempting to board her, under the penalty of forfeiting the pilotage fee to the pilot whose opportunity of employment has been lost thereby.

11. Every pilot, on boarding a ship for the purpose of piloting her to her destination, shall demand of the master or other officer in charge a statement in writing of her draught of water forward and aft.

12. No pilot shall conduct himself contemptuously, or give abuse, or use improper language to the haven master; and every pilot shall behave himself with strict sobriety and with due civility towards the owner, master, and officers of any vessel under his charge.

13. Every pilot shall obey and execute all orders and regulations given and issued by the Pilotage Authority or the haven master, and obey the orders and directions of the haven master as to the number of boats and men to be employed in assisting to navigate any vessel up or down the river Avon, or to moor or unmoor her in such river, or to enter any of the docks within the port of Bristol, and he shall also strictly comply with the directions of the harbour and dock master touching the docking or undocking, mooring or unmooring, towing or removing any ship or vessel which such pilot may have

## PORT OF BRISTOL—continued.

under his charge, so long as such vessel shall be within the limits of the authority of any such harbour or dock master.

14. Every pilot shall use his utmost care and diligence to conduct vessels under his charge to their destination safely, and without damage to other vessels.

15. No pilot shall leave any inward-bound vessel of which he has charge, unless being a second-class pilot to be superseded by a first-class pilot in pursuance of the 7th clause hereof, until she is safely moored in one of the docks.

16. Pilots shall go on board of outward-bound vessels in sufficient time before leaving the dock to ascertain whether they are ready to proceed to sea or anchor in Kingroad; and pilots are in particular to personally satisfy themselves that the steering gear is connected and in working condition.

17. No pilot shall neglect or refuse to proceed to sea from any of the docks with any vessel which he is qualified to pilot when requested to do so by the master or owner of such vessel. In case of refusal he shall at once give his reason therefor in writing to the haven master, who shall report the matter at the next meeting of the pilotage committee.

18. Whenever any accident shall have happened to or been caused by any vessel while in charge of a pilot, such pilot shall, within 24 hours after arrival or after leaving the vessel, fully report in writing the facts of such accident, so far as he knows them, to the haven master.

19. No pilot shall conduct or navigate a vessel to a port outside the pilotage district without the permission of the haven master.

20. Every pilot becoming aware of the existence of any danger in the ordinary track of shipping sailing to or from the port, the displacement of any buoy, lightship, or beacon, the failure of any light or fog signal, or of any other impediment to the safe navigation of the Bristol Channel or the river Avon, shall, as soon as possible, give notice in writing to the haven master of the nature and position of such danger or impediment, or of such displacement or failure, together with the date and hour when discovered.

*Apprentices.*

21. Each pilot shall have regularly at least one apprentice, who shall be apprenticed to him for not less than five years, and he shall instruct his apprentices in seamanship, in taking soundings, marking the channels, taking bearings of the floating and shore lights, buoys, and beacons, and generally in the duties which would devolve upon them in case they should hereafter become pilots.

22. Every pilot shall within one month of the time of taking any apprentice, return to the haven master the name of such apprentice, in order that a regular register of pilots' apprentices may be kept.

23. Whenever an apprentice shall for the first time appear for examination for a licence to act as a pilot, he shall produce his indenture of apprenticeship for inspection by the haven master, and shall furnish evidence to him that he has duly served his apprenticeship.

*Pilot Boats.*

24. Every pilot boat must be kept in good repair and well found with masts, rigging, sails, anchors, cables, and every other necessary material to the satisfaction of the haven master, and must be provided with an approved chart of the Bristol Channel, a copy of the Bristol tide table for the current year, and all necessary nautical appliances.

25. Every pilot boat shall be painted outside entirely black, and the number of her licence shall be painted in white paint on each bow, and such number, four feet in length at least, shall be marked in black paint on the three lower sails of such boat. Every pilot boat shall carry a flag of two colours, the upper horizontal half white and the lower horizontal half red, at the mast-head, of the dimensions of four feet by five, which flag is to be constantly hoisted as a distinguishing signal; and the name of her owner and the port to which she belongs shall be painted at full length on the stern of the boat in white letters at least one inch broad and three inches long.

*Rates of Pilotage.*

26. The rates of pilotage to be paid to licensed pilots for piloting vessels shall be as follows, according to the registered tonnage of such vessel, viz. :—

| BETWEEN   | Under<br>100<br>tons. | 100<br>and<br>under<br>200<br>tons. | 200<br>and<br>under<br>300<br>tons. | 300<br>and<br>under<br>400<br>tons. | 400<br>and<br>under<br>500<br>tons. | 500<br>and<br>under<br>600<br>tons. | 600<br>and<br>under<br>700<br>tons. | 700<br>and<br>under<br>800<br>tons. | 800<br>and<br>under<br>900<br>tons. | 900<br>and<br>under<br>1000<br>tons. |

And, in addition thereto, any pilot who may be required to remain on board any ship or vessel, for the convenience of the captain, master, owner, or agent, shall be paid 10s. for every day or part of a day he may be retained on board while at anchor; and any pilot in charge of a vessel which shall be moored with an anchor in Portishead Dock shall be paid an extra fee of 10s.

PORT OF BRISTOL—continued.

27. Any pilot who may have been compelled by stress of weather or by reason of accident or collision to return to an anchorage or dock with the vessel of which he may be in charge, shall be paid the rate of pilotage for the distance he may have proceeded, and one-third of the pilotage in addition to the rates fixed to such distance on account of bringing such vessel back again. Provided that in such case he shall not be paid any detention money until he has, at the request of the master of the vessel, remained on board of her for 24 hours, after which time he shall be paid 10s. for every day or part of a day he may be retained on board.

28. No pilot shall demand any pilotage rate except upon a note for pilotage approved by the haven master, and signed by him.

The haven master shall be paid by the pilot for examining the pilotage note the several sums following:—

|  | s. | d. |
|--|----|----|
| If of a vessel under 100 tons register         | 1  | —  |
| If of a vessel 100 and under 200 tons register | 2  | —  |
| If of a vessel 200 and under 400 tons register | 3  | —  |
| If of a vessel 400 tons and upwards            | 4  | —  |

and such sums shall be added to the pilotage note and paid therewith by the master or owner of such vessel, and, in default of payment, shall be recoverable as part of the rate or fare of pilotage; and such sum shall forthwith be paid by the pilot to the Pilotage Authority.

Pilotage Fund.

29. Every licensed pilot shall pay to the duly appointed officer of the Pilotage Authority towards the pilotage

fund 5 per cent. of all moneys received by such pilot in pursuance of the preceding bye-law so soon as he shall have received the same.

30. Every certificated master or mate shall, on every occasion that he may navigate his vessel within the portion of the Bristol pilotage district in which pilotage is compulsory, pay to the duly appointed officer of the Pilotage Authority, as a contribution to the pilotage fund, 5 per cent. of the rates which would have been payable in respect of the pilotage of his vessel within such portion of the district if he had not held a pilotage certificate. Provided that such contribution shall not be payable more than once in every 24 hours in respect of any such vessel which is not navigated outside the district in which pilotage is compulsory.

Penalty for Breach of Bye-laws.

31. Every pilot or certificated master or mate offending against or contravening any of the preceding bye-laws shall, for every such offence, be liable to pay a penalty not exceeding 20l., or to have his licence or certificate suspended or withdrawn by the Pilotage Authority.

Given under the common seal of the mayor, aldermen, and burgesses of the city of Bristol, this 18th day of April 1899.

EDMUND J. TAYLOR,  
Acting Town Clerk.

Approved by Her Majesty by an Order in Council dated the 19th day of May 1899.

28 February 1900.

Henry W. Spowar, Clerk.

## PORT OF NEWPORT (MONMOUTH).

*Pilotage is Free. Limits of District.—See p. 56 of Parl. Paper, No. 154 of 1889.*

## BYE-LAWS, REGULATIONS, and RATES of PILOTAGE.

*See p. 24 of Parl. Paper, No. 210 of 1896.*

*At the Court at Windsor, the 14th day of July 1899.*

*Present:—The Queen's most Excellent Majesty in Council.*

WHEREAS by the 582nd and 583rd sections of the Merchant Shipping Act, 1894, it is enacted that a pilotage authority may, by bye-law made under Part X. of that Act, do all or any of the things specified in section 582; but that a bye-law so made shall not take effect until it is submitted to Her Majesty in Council and confirmed by Order in Council:

And whereas the Pilotage Board for the Port of Newport, Monmouthshire, made and submitted for the confirmation of Her Majesty certain pilotage rates, bye-laws, and regulations which were approved by Order in Council dated the 3rd day of October 1895:

And whereas the said Pilotage Board have made and submitted for the confirmation of Her Majesty a new bye-law, as set forth in the schedule hereto annexed, in

substitution for bye-law No. 11 of the rates, bye-laws, and regulations referred to above:

And whereas the provisions of section 1 of the Rules Publication Act, 1893, have been complied with:

And whereas it has been made to appear to Her Majesty that the proposed bye-law is proper and reasonable:

Now, therefore, Her Majesty, by virtue of the power vested in Her by the Merchant Shipping Act, 1894, and by and with the advice of Her Privy Council, is pleased to approve of, and doth by this Order confirm, from and after the date of this Order, the said bye-law, as set forth in the schedule hereto annexed, in substitution for bye-law No. 11 of the rates, bye-laws, and regulations hitherto in force.

*A. W. Fitzroy.*

## SCHEDULE.

"11. Any master or mate of a vessel who holds a certificate under the Board to enable him to pilot his vessel within any portion of the district under the jurisdiction of the Board shall, for every time he may, having passengers on board his vessel, navigate such vessel within the waters of the district over which he is licensed, pay into the Newport pilotage fund a sum not exceeding 5 per cent. of the amount of pilotage which the vessel of which he is in charge would have paid had the

services of a licensed pilot been engaged, and every such master or mate shall, within a month of the 30th June and 31st December in each year, make a return to the clerk of the Board of such services rendered by him during the previous six months (but such payment shall not entitle any such master or mate to a participation in any of the benefits of the said fund), under a penalty of not exceeding 5*l.* for every breach thereof."
